

### IN-PROCESS INSPECTION

During manufacturing, gloves undergo real-time inspections to assess key physical characteristics including dimensions, thickness, tensile strength, elongation, powder content, and watertightness, ensuring compliance with specifications throughout production.

### PRODUCT ALIGNMENT

VIVIT Supply verifies that all products are aligned with our high-quality portfolio, ensuring they meet or exceed established industry benchmarks and internal performance expectations.

### FACILITY QUALIFICATION

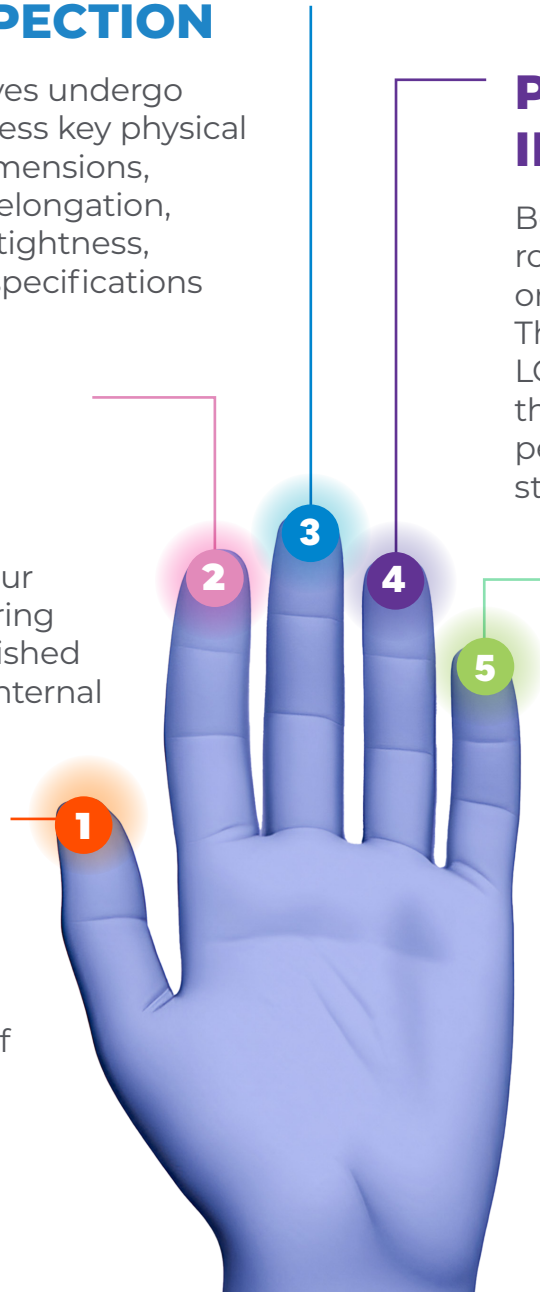

VIVIT Supply conducts comprehensive qualification and auditing of all manufacturing facilities before any production begins, ensuring they meet our strict operational and quality standards.

### PRE-SHIPMENT INSPECTION

Before shipment, a second round of testing is performed on production samples. This step confirms that all LOTs consistently maintain the quality, durability, and performance required by our standards.

### POST-SHIPMENT INSPECTION

After transit, VIVIT Supply performs a final quality inspection to ensure the delivered products meet the high standards trusted by American acute care providers and healthcare institutions.

### Why It Matters

This robust system ensures that gloves delivered under the VIVIT Supply name consistently meet high quality and safety standards, helping to reduce risk and build confidence among healthcare professionals.
