

U.S. Political Engagement Report

Updated July 2026

As a leading sustainable infrastructure investor, we believe we have a responsibility to engage meaningfully on policy issues aligned with our values. We advocate for policies that advance the energy transition through key partnerships, lobbying efforts, and political contributions.

Our lobbying efforts, including in-person and virtual meetings, trade association initiatives, direct responses to Congressional bills and reports, and sign-on letters, are designed to educate policymakers. Most of this policy advocacy activity takes place through 501(c)(6), 501(c)(4), and 501(c)(3) groups (as detailed on pages 5-15).

In 2025, HASI executives participated in 42 meetings with U.S. legislators, executive branch officials and/or their staff, and state policymakers, discussing topics such as energy tax credits, transmission expansion, energy permitting reform, climate policy, energy savings performance contracts, and residential solar policy.

Through our Political Action Committee (“HASI PAC”), we make limited contributions to the campaigns of candidates for U.S. federal office who align with our business priorities.

In the following pages, and to the best of our abilities, we have included five years of historical data on financial contributions to trade associations and social welfare organizations. Additionally, we have included data on PAC disbursements from 2021 to 2025, and detailed expenses related to federal lobbying from 2021 to 2025.

POLICY MISSION

HASI advocates for policies that advance the development of sustainable, reliable, and affordable infrastructure by attracting private capital at scale.

POLICY PRIORITIES

- **Clean Power & Grid Infrastructure:** Legislative, regulatory, and RTO/ISO market frameworks that accelerate the build out regional and interregional transmission, enable consistent and timely siting and permitting of energy projects, establish predictable interconnection timelines for clean energy resources, expand the use of Grid Enhancing Technologies (GETs) to maximize system efficiency, value energy storage for its reliability and flexibility contributions, and broaden market access for distributed energy resources (DERs)
- **Clean Fuels:** Federal and state legislative and regulatory frameworks that enable the development of biogas projects, including durable crediting mechanisms, and fuel decarbonization policies such as federal RFS, and state clean fuel and clean heat standards (CFS and CHS)
- **Emissions Reporting:** Corporate emissions reporting standards that move beyond megawatt-hour matching to reflect the quantified emissions impact of electricity consumption and generation

Trade Associations & Social Welfare Organizations

Trade Association and Social Welfare Organization Disclosure

HASI supports a variety of tax-exempt organizations, including 501(c)3 charitable organizations, 501(c)4 social welfare organizations, and 501(c)6 trade associations. We use corporate treasury funds to pay membership dues to these groups. By law, social welfare organizations and trade associations are permitted to use a portion of membership dues for political activities.

Membership in a trade association or coalition does not mean HASI endorses every public position taken by that organization. We review these memberships annually against our business priorities.

In the pages that follow and to the best of our abilities, we have disclosed the past five years of our financial contributions to trade associations and social welfare organizations.
