

CFEASL4

Emergency assist alarm 4 way splitter

The 4 way splitter allows up to 4 stand alone areas which may require emergency assistance to be monitored from one location .

Staff can then, at the designated area such as a reception or security desk, react to an alarm swiftly and efficiently.

The emergency assist power supply unit (PSU) is designed to power the 4 way splitter this is provided with the CFEAPULLKIT.

When using the 4 way splitter each area which may require emergency assistance does not need its own PSU as each as each emergency assistance alarm is powered is powered by the 4 way splitter.

The 4 way splitter is designed to be used in conjunction with a CFEAPULLKIT as the first emergency assist alarm. Additional alarm points should use the CFVCEA which is provided at a lower cost and does not contain a PSU.

Features and benefits

- High visibility
- Small compact design
- Up to 4 areas which require emergency assistance alarms can be monitored from one point.
- Local alarm lights use blue LEDs to avoid confusion
- Visibility to remote staffed areas
- No mains or PSU required at each disabled toilet using the 4 way splitter

Powering Business Worldwide

Technical specification

Code	CFEASL4
Description	4 Way Splitter Unit
Specification	
Output	Volt free relay
Physical	
Construction	PC
Dimensions (mm)	H 86 x W 146 x D 39

Wiring

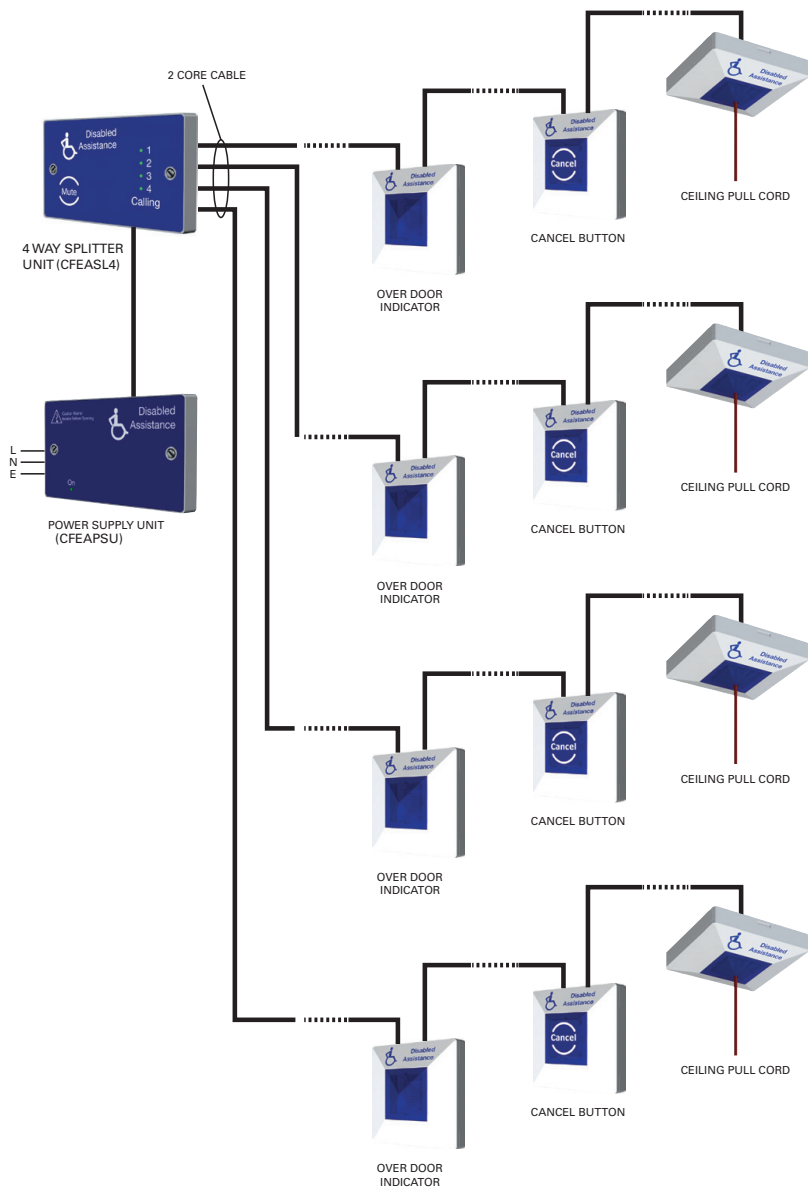

The mains powered supply must be wired by a qualified person in accordance with the latest revision on the IEE wiring regulations and connected to the building mains supply using a fused spur (fitted with a 3A fuse).

All mains wiring should be provided in accordance with the current edition of the IEE Wiring Regs (BS 7671) or in accordance with the relevant national wiring rules.

Always segregate Extra Low Voltage (ELV) wiring from the mains wiring. System requires minimum 2 core 0.4mm² cable. All wallmounting devices should be mounted onto a back box of suitable depth.
