

MEDIA RELEASE:

15th September 2025

Akordi Expands to United Kingdom with Specialist Infrastructure Team

Akordi, the infrastructure decision intelligence specialists, has announced the launch of its UK operations with the appointment of two senior infrastructure professionals to lead the expansion.

Morez Mokarami joins as **Planning & Scheduling AI Lead**, bringing 15 years of construction planning and optimisation experience across mid-size to multi-billion-dollar projects. His expertise spans mining, oil and gas, and major infrastructure projects, with a particular focus on deploying Generative Scheduling solutions to accelerate project delivery.

Anna Thompson has been appointed as **Planning & Commercial Risk Lead**. An experienced planner, project controls and risk manager, Anna brings 20 years of expertise in infrastructure project delivery and management. Her comprehensive background across the full project lifecycle will be instrumental in supporting UK clients through complex infrastructure challenges.

The UK expansion comes as the country embarks on an unprecedented infrastructure investment program. According to the UK Government's [10-Year Infrastructure Strategy](#) published in June 2025, £725 billion has been committed for infrastructure investment, creating substantial opportunities for specialist advisors who can help deliver projects faster and with greater certainty.

Akordi combines world-leading construction expertise with powerful AI technologies to help infrastructure clients make faster, smarter decisions at every stage of capital delivery. The company's unique approach with tech-enabled construction advisory works alongside capital project leaders to identify optimal scheduling and construction delivery pathways that provide a pathway to certainty.

Akordi continues to operate offices in Sydney and Melbourne, serving clients across Australia and the United Kingdom. The company plans to expand its UK team throughout 2026 to meet growing demand.
