

Job Description

Senior SRE / DevOps Engineer

Position Title: Senior SRE / DevOps Engineer

Experience Required: 5+ years

Location: Mumbai (onsite)

Job Summary:

We are seeking a highly experienced Senior SRE / DevOps Engineer with strong hands-on production experience in distributed systems and backend infrastructure. The ideal candidate will be responsible for operating mission-critical systems, managing live production incidents, and continuously improving reliability, scalability, and performance across large-scale environments

Key Responsibilities:

- Act as a Senior Site Reliability Engineer (SRE) responsible for ensuring high availability, scalability, and reliability of production systems.
- Operate and troubleshoot mission-critical distributed systems including Kafka, Cassandra, and relational databases.
- Lead on-call incident response, including triage, mitigation, root cause analysis, and postmortems.
- Diagnose and resolve performance and stability issues in Java (Spring Boot) services and JVM environments.
- Improve system resilience through automation, monitoring, capacity planning, and Infrastructure as Code practices.
- Define and drive observability standards including metrics, logs, tracing, SLIs, and SLO management.

Required Skills and Qualifications:

- 5+ years of experience as an SRE / DevOps Engineer with strong hands-on production exposure to distributed systems.
- Proven expertise operating Apache Kafka, Apache Cassandra, and relational databases (Postgres/MySQL) in high-availability environments.
- Strong experience managing and troubleshooting Java (Spring Boot) services with deep understanding of JVM internals (GC, memory, threading).
- Solid experience in incident management, on-call rotations, root cause analysis, and production performance tuning.
- Working knowledge of Kubernetes, Infrastructure as Code (Terraform or similar), and observability practices (metrics, logs, SLIs, SLOs).

What We Offer:

- Competitive compensation and benefits.
- Opportunities to work on cutting-edge technologies and projects.
- A collaborative and innovative work environment.
- Continuous learning and professional development support.
