MARE-CARE CUBES

TAILORED NUTRITION FOR BROODMARES DURING LATE PREGNANCY AND LACTATION

High-calorie cubes providing extra support during late pregnancy and lactation.

Research

Mare-Care helps to increase circulating levels of vitamin E, which can positively affect fertility and colostrum quality. Studies show that natural vitamin E is retained in tissues for longer periods of time, creating a reservoir that allows it to be instantly available when the horse needs it most. Mare-Care provides supplemental omega-3 fatty acids, which can give many reproductive advantages as research shows that they can optimise conception rates and support fertility.

Feeding requirements

Feeding requirements will vary subject to individual needs, stage of pregnancy or growth, body condition and feed management practices. To discuss in further detail, please call our Nutrition Team.
