

Appendix C

Sources and Methods

Workforce Trends in State Departments of Corrections

In partnership with
Correctional Leaders Association

APPENDIX C

Sources and Methods

This appendix documents the unique data collection and analysis undertaken for this project to examine workforce trends and indicators of health and safety in state corrections departments in all 50 states.

The tables below detail the sources used to generate figures that appear in the report and associated appendices. Sources that include a website link were last verified and accessed in October 2025. Sources obtained from an information request were requested and received from Spring 2024 to Summer 2025.

Every effort has been made to ensure that the data analysis presented in this report is transparent and accessible, a challenging task given the wide variability of data availability, format, and methods across state sources. Please contact info@safeinside.org with any questions.

The two sections that follow provide:

1. Sources used for the ***workforce trend analysis*** as presented in Appendix A: State Corrections Workforce Profiles and related figures in the main report.
2. Sources used for the ***health and safety trend analysis*** presented in Appendix B: Health and Safety Trends and related figures in the main report.

Workforce Trends

Sources and Methods

The information on workforce trends came from publicly available reports, databases, and public records requests to state administrative, human resources, financial, and corrections agencies. The figures reported here only include information on the operation of state adult corrections facilities and do not include juvenile facilities or staffing. The table below outlines the common methodology applied across states, with state-specific exceptions noted in the following tables. When necessary, platforms such as Tabula and Python were used to import, convert, and clean data.

METRIC	APPROACH
Statewide Workforce Counts	<ul style="list-style-type: none">Limited to executive branch agencies when possible; excluded higher education, judicial, and legislative branches if separately identified.Aggregated sub-departments/facilities into agency totals when provided at the sub-level.Reported figures as defined by each state human resources agency; definitions of "employee" vary. Most states provided headcount data; alternate definitions are noted.Used the most recent snapshot available (e.g., end of FY2024) or the latest reported figure. State definitions of fiscal year vary.
Statewide Turnover	<ul style="list-style-type: none">States use varying methods and rarely provide detailed definitions. The most common measure is the number of separations over a year divided by the average number of employees.Alternate methods or lack of documentation are noted.As with workforce counts, turnover reflects differing definitions of "employee."
Statewide Overtime Expenditures	<ul style="list-style-type: none">Reported total expenditures, including state, federal, and other sources where specified.Captured trends from FY2019 to FY2024 when available; otherwise used the most recent figure. State definitions of fiscal year vary.
Corrections Department Staffing <i>Vacancy, Turnover, Salary Increases</i>	<ul style="list-style-type: none">Reporting varies widely across DOCs. When requesting corrections officer vacancy rates directly from DOCs, Safe Inside requested a ratio of filled to budgeted positions on a snapshot date.Reported on all corrections officer positions unless otherwise specified (e.g., when data included all DOC staff or only certain officer classes).Standardized titles to "corrections officer" (some states use terms like "uniformed security staff").
Incarcerated Population	<ul style="list-style-type: none">Typically reported as a one-day snapshot (e.g., first or last day of a fiscal/calendar year).Noted when data came from unified systems (i.e., included local jails).Juvenile populations excluded.

Health and Safety Trends

Sources and Methods

The information about health and safety trends came from a 50-state survey of metrics publicly available on state corrections department websites. The survey highlighted the limited nature of publicly reported information in this area but nonetheless allowed for analysis of several key trends where sufficient data were available.

The tables that follow list the sources for each state included in an analysis of a health and safety metric, either in Appendix B or in a related figure in the main report. States were included in each figure only when data were both sufficient and consistent to support the analysis. Additional details on data limitations and variations are described in Appendix B.

ALABAMA

The following sources were used for Appendix B and report figures 6, 9, and 10.

METRICS	SOURCE	ACCESS/NOTES
Assaults on Incarcerated People, Assaults on Staff, Percent of Population with Violent Offenses, Percent of Population Aged 50 Years or Older	Alabama Department of Corrections, <i>Monthly Statistical Reports</i> , fiscal years 2019–2024	Online * Population metric starts at age 51
