EARCUP HELMET KIT features

The NJORD earcup kit for helmets is a professional kit that fits on the NJORD safety helmet and various other helmet brands and designs.

The earcups are specifically designed with additional space inside the earcups to relieve pressure on the ears while still being lightweight and therefore allowing the user to wear the earcups for longer periods of time.

The bracket allows adjustments of both angle and height for extended comfort and optimal fit.

The earcups are suitable to be used with loud machinery, engines, industrial machines and power, and pneumatic tools, when the user is required to wear a safety helmet and standard earcups are not possible.

Item no.:	IMPA code:	Product name
1466398	331166	EAR MUFF F/ HELMET HI-VIS EN-352-1 CUP-KIT NJORD
