Vol.1

STARSEER EXHIBITING AT INFOSEC WORLD (#118)

We're excited to exhibit at InfoSec World, Oct 27-29, Lake Buena Vista, Florida, booth #118, where we'll be showcasing the newly launched Starseer 1.0 — a platform built for AI security, assurance, and decision transparency. Designed to help organizations advance their AI maturity, Starseer empowers teams to eliminate shadow AI, enforce access and usage policies, secure AI assets and services, and analyze and mitigate bias through advanced instrumentation, analysis, and model steering.

Powered by its Model Interpreter and Risk Engine, the platform reveals hidden risks such as backdoors, jailbreaks, drift, and misalignment, while its AI Census provides complete visibility, compliance, and control. Attendees can meet Tim Schulz (CEO) and Carl Hurd (CTO), Starseer's founders, to learn how the company is helping enterprises adopt and govern AI safely, confidently, and responsibly.

SOLUTIONS FOR A SAFER AI FUTURE

We're helping build a better AI future, and the data shows we urgently need it. As organizations rush into AI adoption, many are flying blind amid rampant shadow AI, weak governance, and real financial fallout. Starseer's platform closes this gap through four core capabilities: Discover, giving enterprises visibility into every AI asset, including those operating in the shadows; Enforce, applying consistent policy controls and guardrails across teams and use cases; Assure, continuously testing, validating, and monitoring model behavior, drift, and compliance; and Manage, governing AI risk, performance, and lifecycle at scale with transparency and auditability.

TOP UPDATES

Specialized solutions for Credit Unions, Regionals, and more

Starseer is building specialized solutions designed for credit unions, regional banks, and mid-market organizations who must adopt and govern AI with fewer resources.

AI Interpretability, Debugging, and Steering

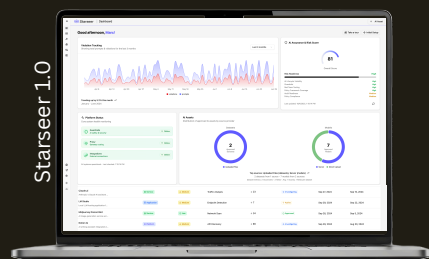

Starseer delivers new AI model interpretability with built-in instrumentation, comparisons, and active model steering, providing teams with visibility and control over how AI thinks, learns, and makes decisions.

Practices To Drive AI Adoption Success

The AI Assurance Lifecycle ebook is a practical guide to building trust and control across your AI ecosystem. Download today from [here](#).

AI TRENDS & RISKS YOU CAN'T IGNORE

- 90% of IT leaders are worried about shadow AI.
- 79% report negative outcomes from unapproved AI use (false results, data leaked).
- 13% say their organizations have suffered financial, reputational or customer fallout due to shadow AI.
- Over 50% of firms lack any clear AI policy, and only 13% have well-documented rules around AI usage.
- Nearly 99% of companies surveyed report financial losses from AI-related risks, with 64% losing more than \$1 million.
