EnMa M Series

Ultra-fine Pulverizer

EnMa M Series pulverizer is designed with milling diameter of 300, 500, 800mm, which is used for PVC, PE pipes, profiles, sheets and other materials to be further processed after granulating. The material output size ranges 20-100 mesh. The machine feeds the crushed materials into the high-speed rotating grinding disc in an orderly manner through a vibrating feeder.

The powder after milling is collected by a blower and cyclone separator system through centrifugal force. Depending on the application, the machine can be equipped with an integral milling disc or a split milling disc, and a vibrating screen and dust collecting system can be installed.

General technical features

Model	EnMa M300	EnMa M500	EnMa M800
Milling disc diameter in mm	300	500	800
Motor power in kw	22	45/55	75/90
Weight in kg	900	1600	3000
Output(upon material) in kg/h	50-250	100-500	200-800
Overall dimension in mm	1500X750X1900	1700X1050X2200	2200X1250X2600
