

### Multi-action germicide

**Stalosan F has been proven effective against many problems, including thrush, mud fever, certain forms of coughing and ammonia and moisture in the bedding.**

Stalosan F removes toxic, foul-smelling ammonia and hydrogen sulphide vapours that attack mucous membranes. Consequently, the horse-box environment is improved.

The straw stays fresh longer when using Stalosan F, which typically reduces straw bedding by 10–15%. In addition, using Stalosan F at least once a week will considerably reduce the number of flies.

### For stables and yards

Stalosan F, dry disinfectant powder will protect your horses from build-up of bacteria, moisture and ammonia to provide better living and working conditions for you and your horses.

Stalosan f can be applied in the stables and yards weekly to disinfect, absorb and protect!

The unique combination of natural ingredients in Stalosan F work together to provide protection in natural and organic materials for up to a week and Stalosan is safe to dust around your horses.

Stalosan F can be applied on transport floors to disinfect, absorb moisture and to make clean out much easier.

Ideal for longer trips where build up in the trailer leads to high moisture levels and odours.

## Powerful, Natural Disinfectant

Stalosan F has been tried and tested for over 55 years as a leading animal housing disinfectant. The unique combination of natural ingredients combine to provide protection against diseases, viruses and infections like Salmonella, Coccidia, Thrush, Mud fever and so many more!

## Absorbs Moisture & Ammonia

Stalosan F absorbs four hundred times its weight in ammonia and moisture. This provides a drier environment for your horses, removes toxic ammonia odours that cause respiratory symptoms and extends the life of the bedding, which reduces work for you!

## Protects the Skin and Hooves

Unlike limestone or zeolite based housing conditioners, Stalosan F has a very unique low pH formula. Providing a low pH environment protects the horses from alkaline conditions, which damage the skin and hooves.

## Reduces Flies and Parasites

By eliminating fly larvae, Stalosan disrupts the fly life cycle. This significantly reduces the population and prevents further outbreaks. Its drying properties absorb the moisture and odours from the bedding and floors, creating an inhospitable environment for flies and other parasites.

## Application

In horse stables, spread Stalosan F at least once a week—across the entire floor area or existing mat and particularly in wet, damp areas and along edges. The dosage is always 50 g/m<sup>2</sup> (1 pound per 100 sq. feet), but it may be very valuable to concentrate on the critical areas in the stable. The usage of Stalosan F is typically 12½–25 kg (27.5-55 pounds) per horse/year.
