

2.5MVA, 3 phase, 4 wire, 415/240 VAC service to feed three 1,200A I-LINE mains with 28 250A Powerlink panelboards per container.

588 power and network drops pre-wired at the racks.

C19 power cord drops fed from dedicated 20A, single pole, 240-volt circuit breaker; can be controlled remotely or programmed for curtailment.

14 POE network switches support the network drops.

14 48" exhaust fans to pull air through machines and expel hot air. Intake air filtered through 24 weatherproof hoods.

3" thick insulated roof with epoxy coating to provide additional weather/temperature protection.
