Carolina Implants Case Study Portfolio

Welcome to our professional case study portfolio. The following pages showcase a series of oral implant procedures performed by our expert surgical team. These images are intended for use by referring dental professionals and highlight the quality and precision of our work.

Please note: This document contains clinical images that may not be suitable for all audiences. It is shared here to offer insight into the advanced procedures we perform and the outcomes we achieve.

ESTHETIC CROWN LENGTHENING

Esthetic crown lengthening procedure demonstrating surgical technique for improving crown-to-root ratio and creating ideal gingival architecture for restorative treatment.

CONNECTIVE TISSUE GRAFTING FOR RECESSION

Connective tissue grafting procedure for root coverage demonstrating surgical technique and healing progression for gingival recession treatment.

CONNECTIVE TISSUE GRAFTING FOR RECESSION CASE

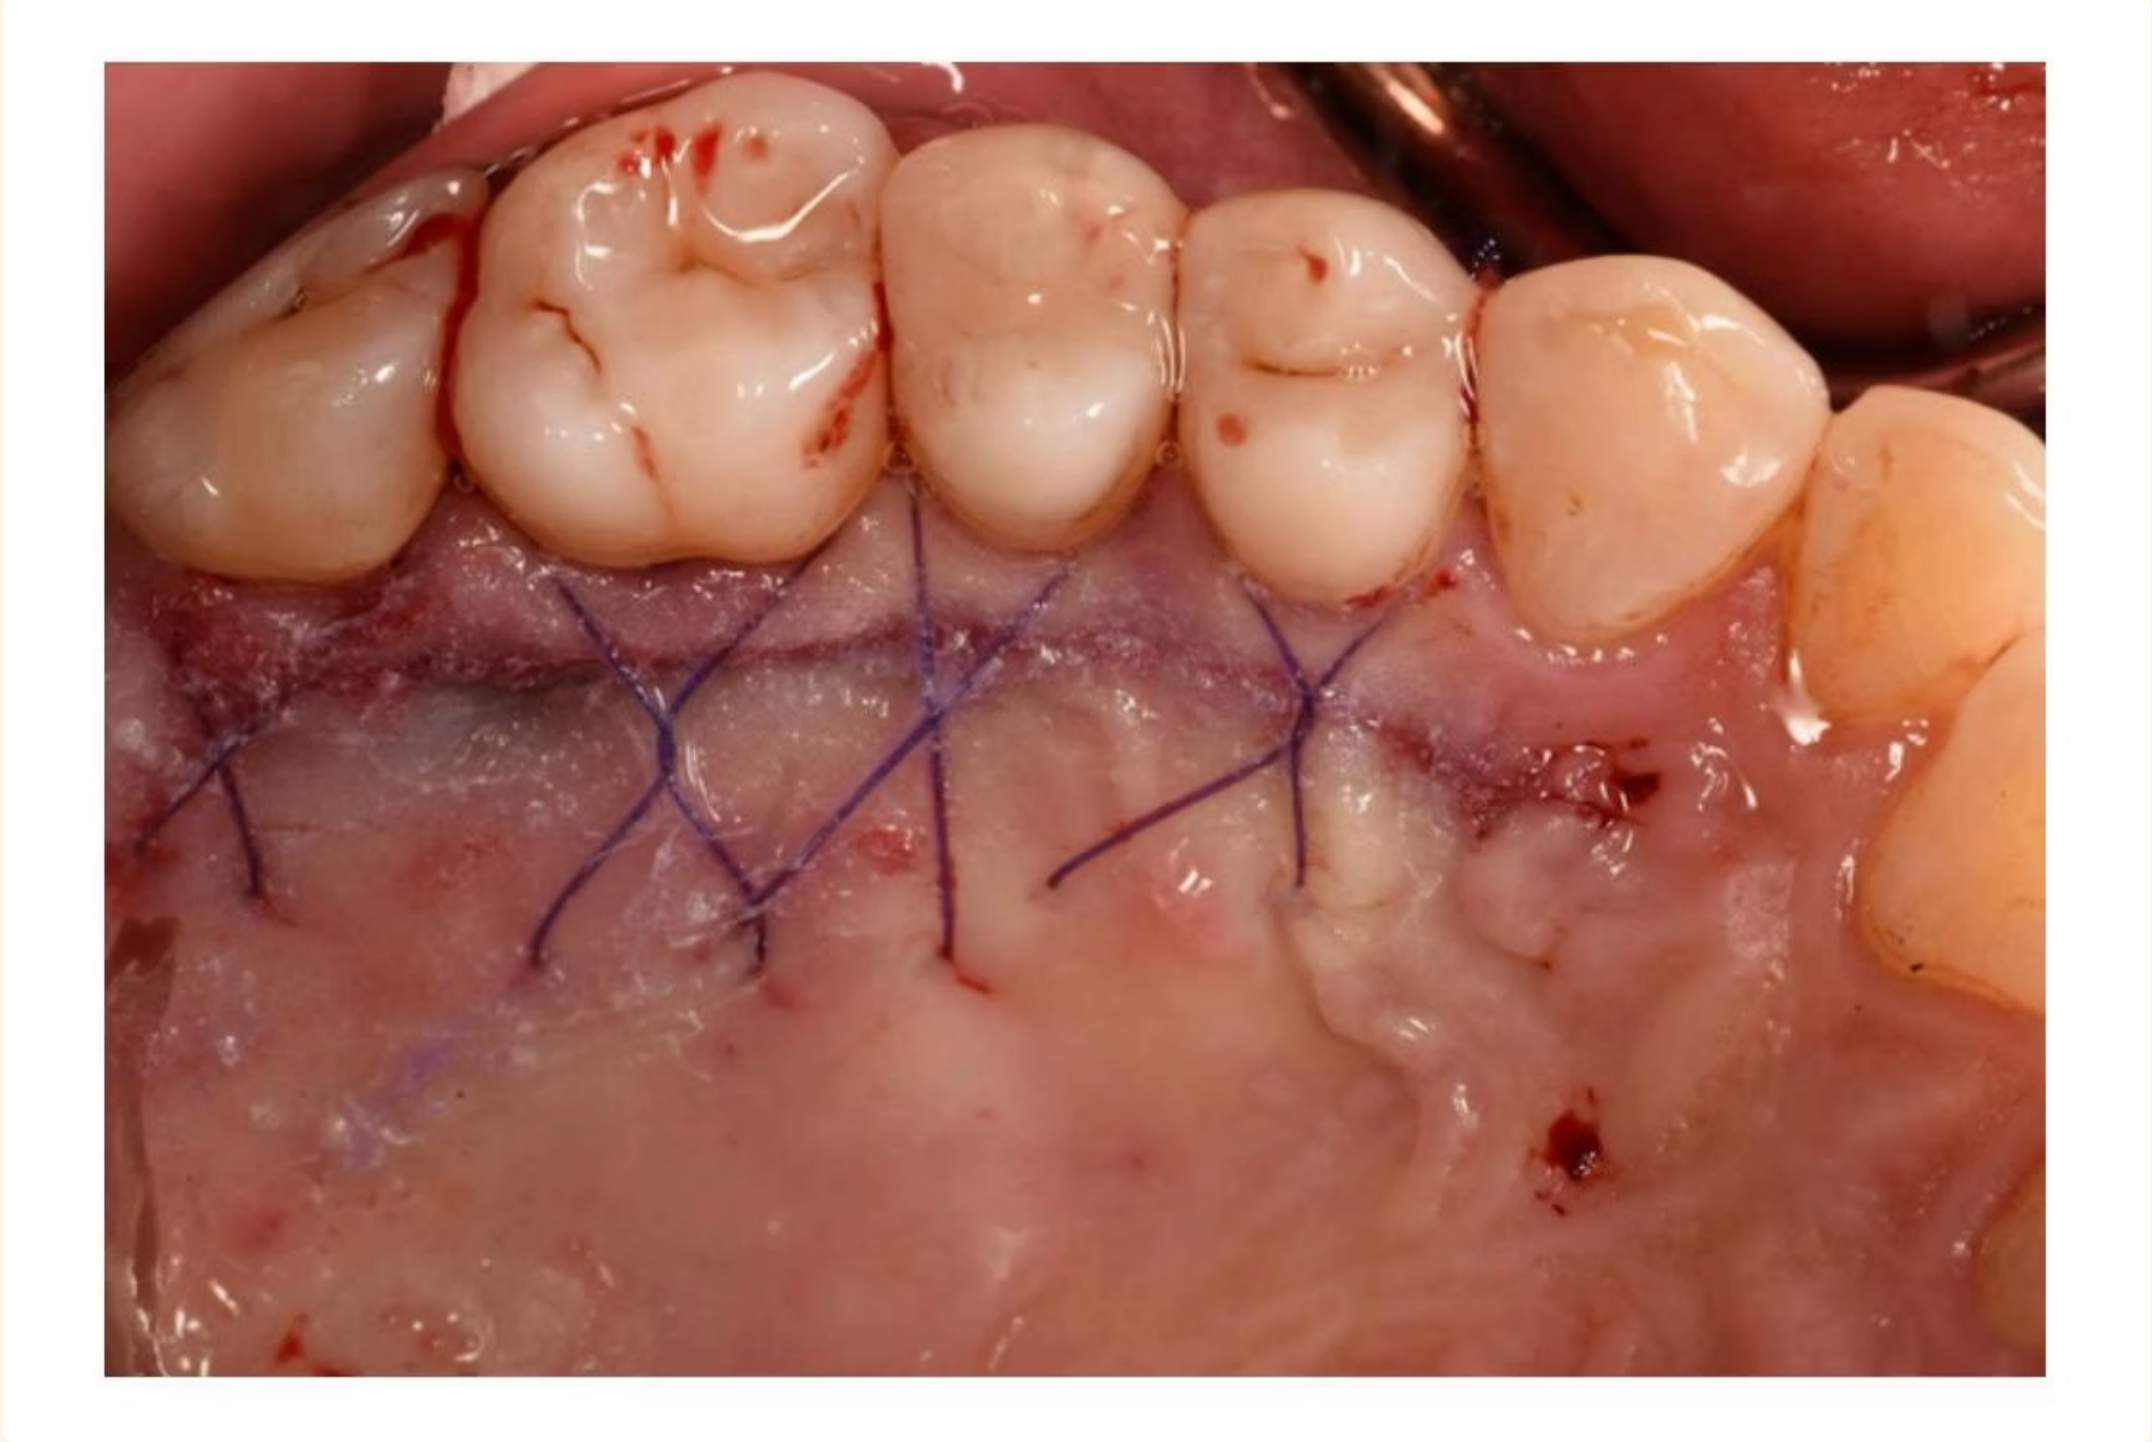

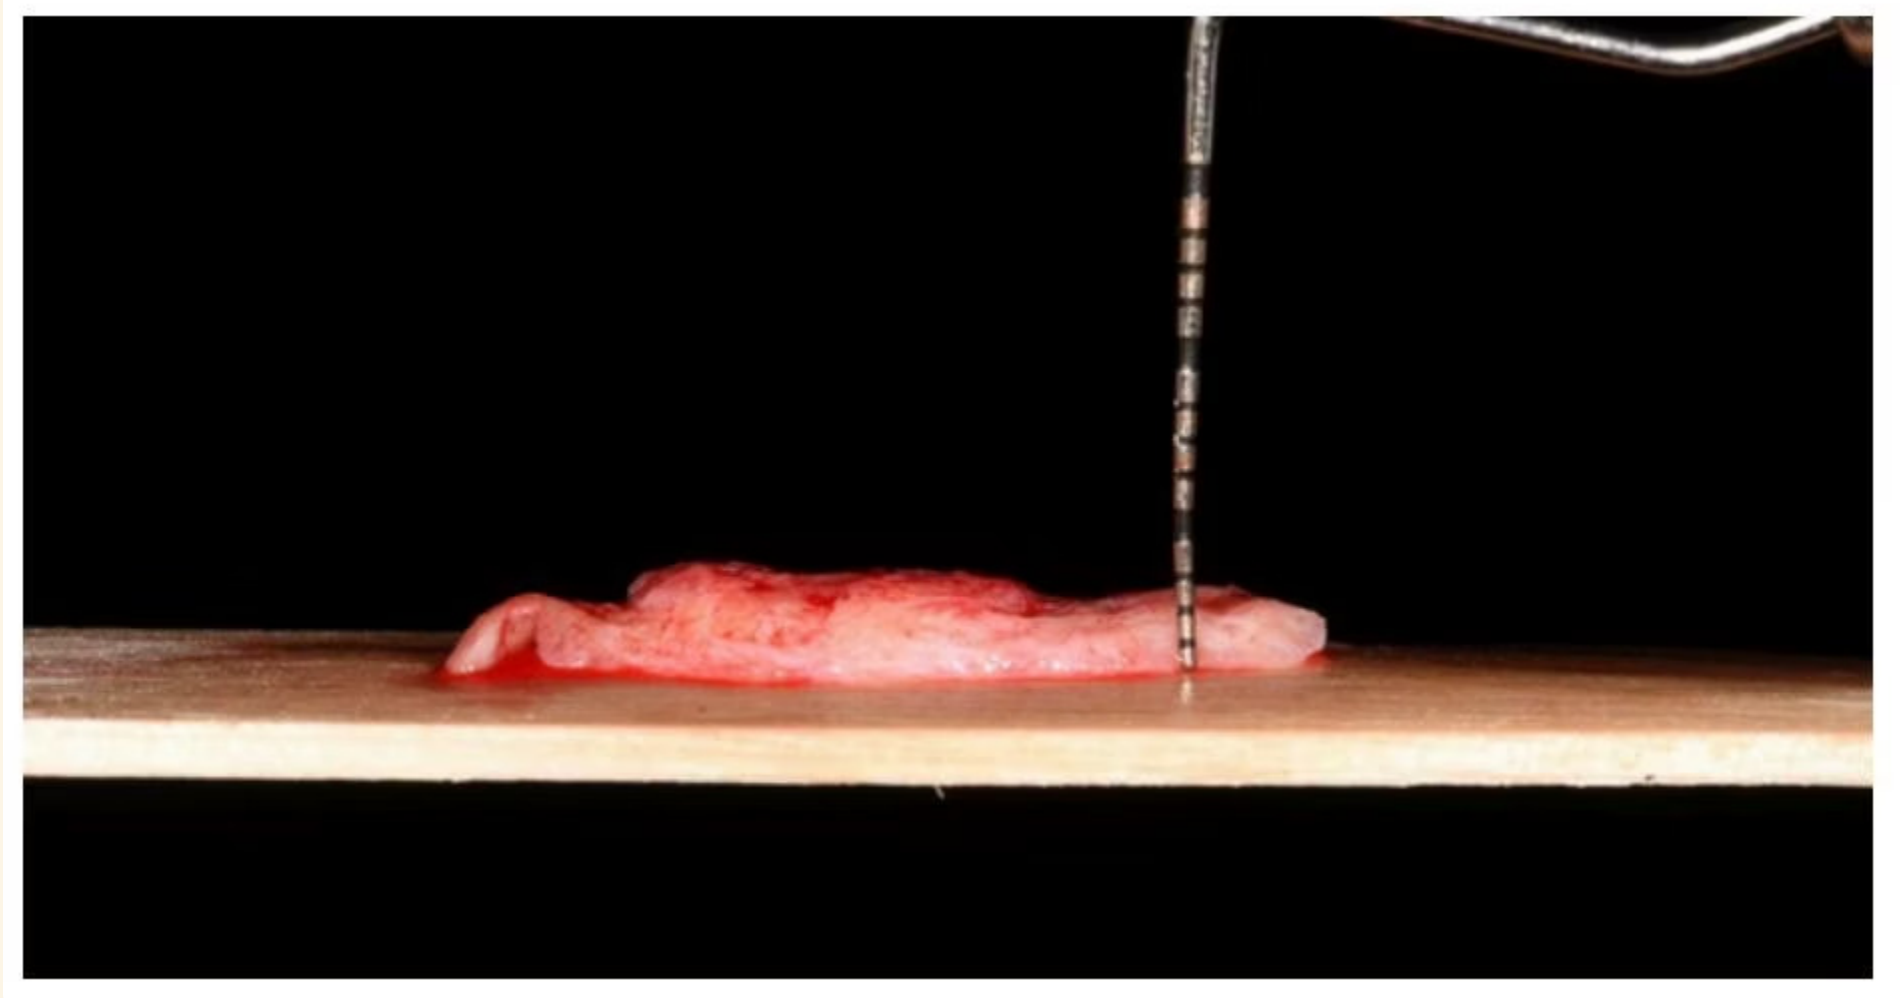

Second connective tissue grafting case showing excellent root coverage results and improved gingival thickness and keratinized tissue width.

CONNECTIVE TISSUE GRAFTING FOR RECESSION CASE #3

PRE-OP

SURGERY

3 MONTH POST-OP

Comprehensive documentation of connective tissue grafting procedure from pre-operative assessment through surgical technique to post-operative healing.

CONNECTIVE TISSUE GRAFTING FOR RECESSION CASE (OTHER SIDE FROM PREVIOUS CASE)

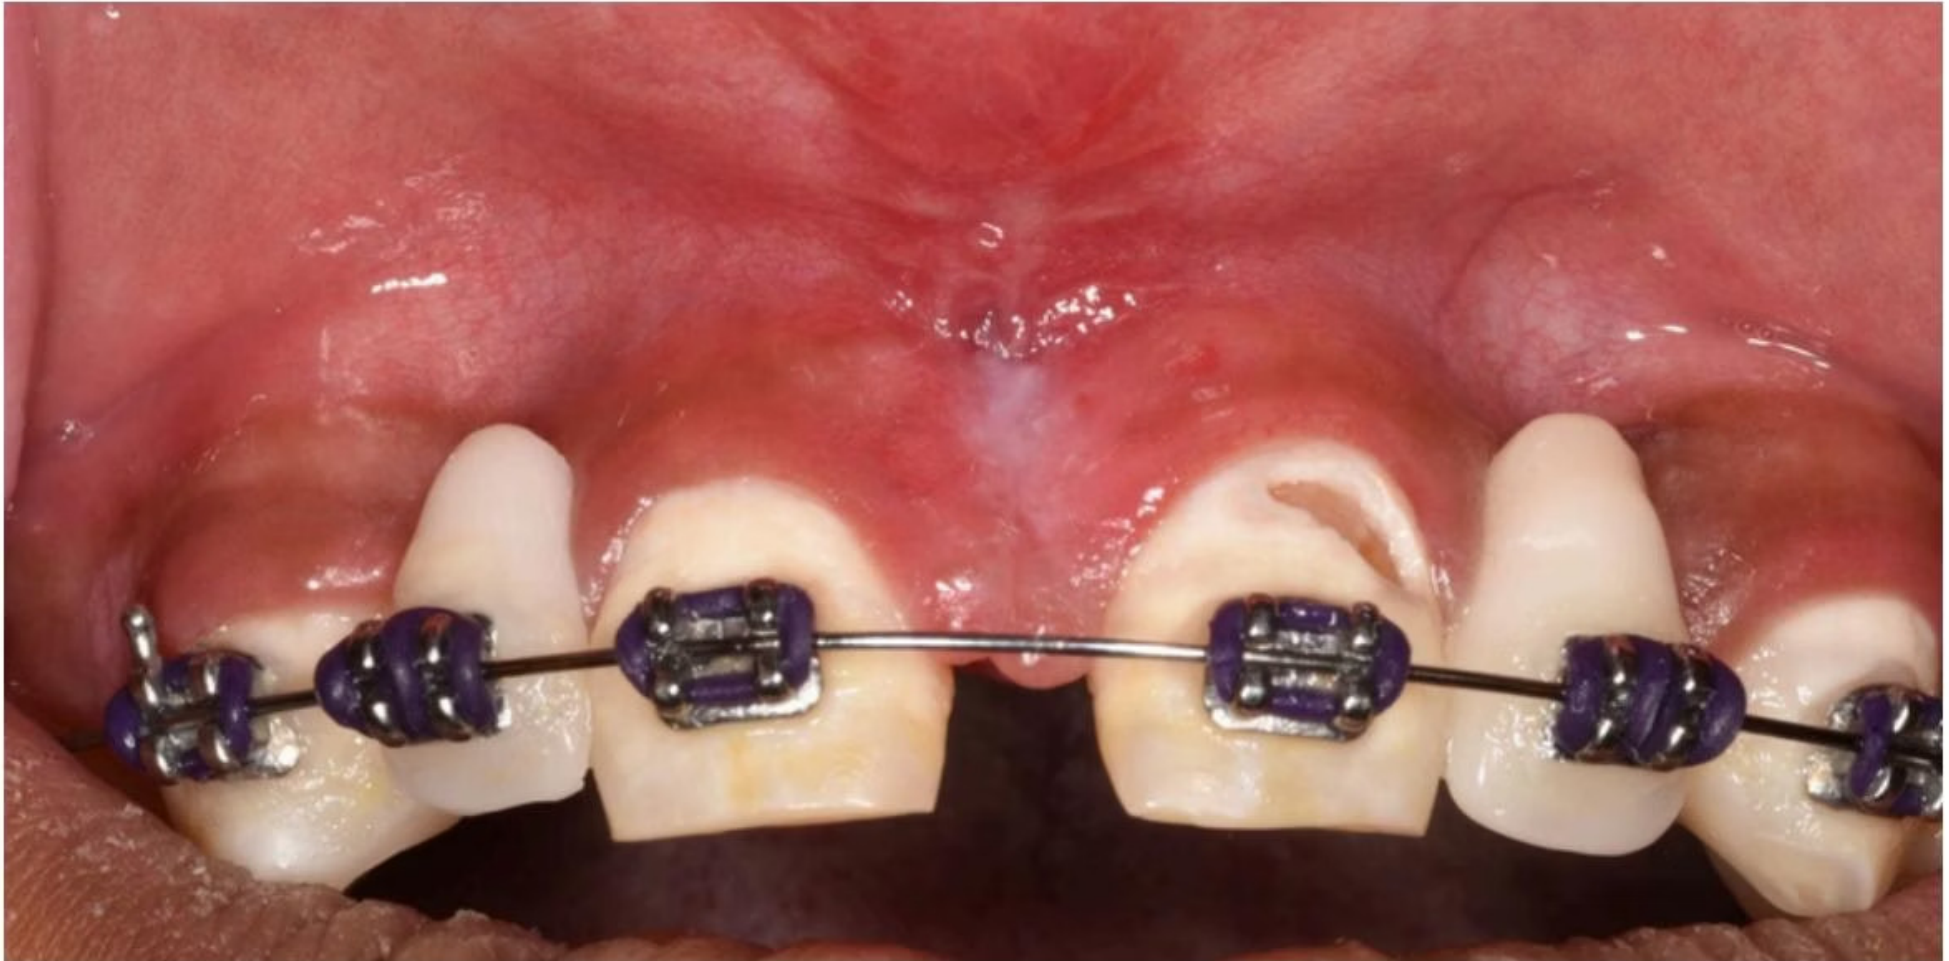

LASER DEPIGMENTATION

Bilateral connective tissue grafting case and laser depigmentation procedure for esthetic gingival enhancement.

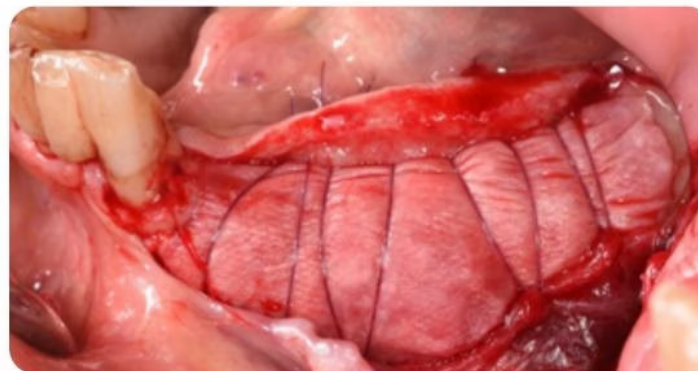

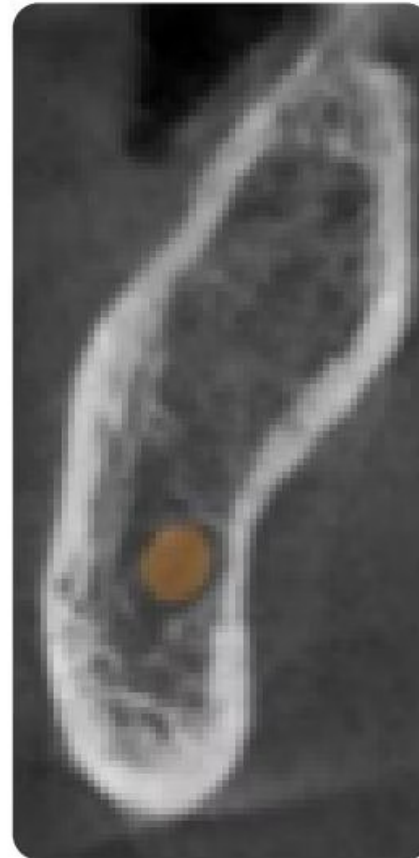

Frenectomy Procedure Documentation

This case demonstrates the surgical technique and outcomes for frenectomy procedures. The following images show the step-by-step process and healing progression.

IMPLANT SITE DEVELOPMENT AND IMPLANT PLACEMENT

Comprehensive documentation of implant site preparation and placement procedures, showcasing the surgical techniques and protocols used for optimal implant integration.

FREE GINGIVAL GRAFT

Free gingival graft procedures are essential for increasing keratinized tissue and improving periodontal health. This case series demonstrates the surgical technique and healing outcomes.

Gingival Graft Healing Process

Post-operative healing and tissue integration following free gingival graft procedures. These images document the progressive healing and successful tissue incorporation.

Thank You for Your Referrals

We appreciate the trust you place in Carolina Implants & Periodontics when referring your patients for specialized periodontal and implant procedures. Our commitment to excellence in patient care and clinical outcomes drives everything we do.
