Webflow Expert

I'm a multidisciplinary web designer and developer with hands-on experience in building scalable websites and web applications using modern no-code tools. I specialize in UI/UX design with **Figma**, front-end development with **Webflow**, and advanced logic/API integration using **Wized** and **Xano**.

Throughout my career, I've had the opportunity to work with startups, government agencies, and major regional brands. At **Dezigners**, a French startup, I was trained in Figma and Webflow according to European standards, and gained deep expertise in the **Finsweet Client First framework**. I later joined **Entlaqah**, where I contributed to large-scale projects such as the **NIGSD (Egypt's Ministry of Planning)** website and a real estate platform for **MANAJ** in Dubai.

At **Rafah AI**, I led the design and development of a mental health web app powered by AI, enabling personalized dashboards, psychological testing, and real-time progress tracking for users. The platform was built using **Webflow**, **Wized**, and hosted on **AWS**, in collaboration with a skilled team.

In addition to my full-time roles, I've delivered dozens of successful freelance projects for marketing and advertising agencies, including **Effect** (MBC Group's partner), **Dreamspace**, and **Kanaf Real Estate**.

With a strong foundation in design, no-code development, and user-centered thinking, I'm passionate about building digital products that are both beautiful and functional.

Experience

Dezigners

I worked for a French startup called Dezigners, which specializes in website design and development. There, I was trained to use Figma according to European standards, as well as to develop complete user interfaces and experiences. I also learned to use Webflow for front-end development. I received thorough training in using the Finsweet Client First and Wized for logic and APIs and xano for back-end part

ENTELAQA

I worked with Entlaqah, an Egyptian company with Emirati roots, where my role involved designing and developing websites for both governmental and private sector clients.

Among the many projects I handled were the design and development of the official website for Egypt's Ministry of Planning (NIGSD), as well as the website for MANAJ, a well-known real estate development company based in Dubai

RAFAH AI

I worked at Rafah AI, a company focused on mental health through an AI-powered web application.

My role involved designing and developing the platform to efficiently handle all subscriptions and users. Each user

had access to a personalized dashboard, allowing them to interact with the company's AI assistant, update their personal information, track their mental health progress, and take psychological assessments that help analyze their mental state.

This was a large-scale project that I developed using Wized and Webflow, integrated with an Amazon server, in collaboration with a team of colleagues

Freelance work

I have worked on numerous freelance projects for digital marketing and advertising companies, including well-known names such as Effect — a partner of the MBC Group — as well as the Saudi company Dreamspace and Kanaf Real Estate.

I possess extensive experience and have completed dozens of freelance projects, which you can explore through my Behance portfolio

Skills

Figma Ux/ Ui Design | Webflow Development | Wized Logic and Apis | Xano No-Code Back-End Data Base | Finsweet Client First Framework | Fully Functional SAAS Websites and Webapps

Education

Zagazig University | Faculty of engineering | Civil Engineering Department
