

## **The Pytchley Group Advances UK Bereavement Technology with Major Suite-Wide Upgrades.**

The Pytchley Group, the family-owned organisation behind Gower Consultants, Deceased Online and Manuscripti, has announced a coordinated modernisation of its core bereavement technology products. After more than 35 years supporting councils, crematoria and cemetery teams, the group is investing in advanced cloud and AI systems, improved access to historic data and more resilient digital workflows.

**Deceased Online** has launched an entirely redesigned website, offering faster search, clearer navigation and improved access to the UK's growing archive of digitised burial and cremation records. Working with councils nationwide, the service preserves vulnerable registers and makes them instantly searchable for staff and the public whilst simultaneously generating income. Monthly subscriptions are now available, widening access to researchers, family historians and professionals.

**Epilog**, full modernisation is progressing well, one of the UK's most established cemetery and crematorium management systems. The updated platform will bring a modern architecture, better performance and improved workflow capability. Full release is targeted for Q4 2026, giving bereavement services a future-proof operational system.

### **Erasmus Cloud – Cloud-Native Inspections from 2026**

From Q1 2026, Erasmus Cloud will introduce a new cloud-based memorial inspection workflow. The rollout includes a browser admin portal with real-time oversight, a mobile inspection app and secure hosting that removes the need for local installations.

### **Manuscripti – Strengthening Preservation and Digital Access**

Manuscripti continues to expand its specialist scanning, restoration and digitisation services for burial, cremation registers and maps. The service prepares legacy documents for long-term preservation and enables their use within modern platforms like Deceased Online and all management systems.

### **Leadership Comment**

"This is an important moment for our organisation and for the sector," said Jamie Burges-Lumsden, Group Managing Director. "We are bringing long-standing bereavement systems into a modern, resilient digital environment. The new Deceased Online platform, the Epilog modernisation and the rollout of Erasmus Cloud show our commitment to delivering technology that genuinely supports frontline teams and the public."
