

TURNING INSPECTION DATA INTO DRILLING POWER.

Tubular Pro is a cutting-edge software platform built for the oil and gas drilling industry, empowering service companies and operators to unlock maximum performance and lifespan from their drilling tubulars through enhanced, data-driven inspection insights.

Inspection Data & Reporting

Tubular Pro was designed to enhance and leverage existing inspection data with the goal to provide valuable insights into the utilization and performance of all drilling tubulars and accessories.

Drill String Health & Performance

Tubular Pro empowers users with the ability to gain deeper insights into their drill string inspection data by analyzing string health, string life percentages, and key pipe body wear indicators that impact drilling performance and safety.

Data Importing

Create and manage your inspection report templates within Tubular Pro for each of your end-users and customers.

Drill String Health

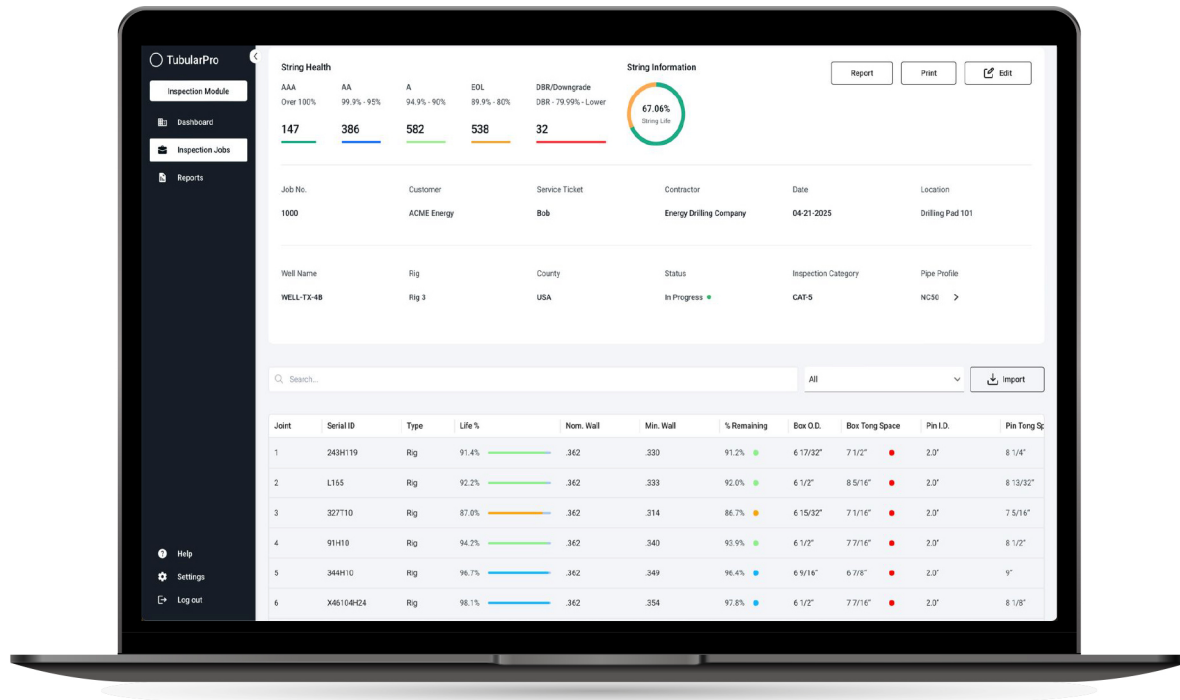

Tubular Pro analyzes current and historical inspection data to calculate drill string health based on key drill pipe wear indicators and inspection data points such as wall thickness to provide insights into the health of the drill string.

Enhanced Report Creation

Tubular Pro allows you to create enhanced inspection reports that highlight drill string conditions and overall string health.

Pipe Life Expectancy

Tubular Pro can help customers determine pipe life expectancy based on pipe profile and inspection criteria including minimum wall thickness. Tubular Pro natively supports all types of drilling tubulars, tubing, OCTG, and drilling accessories.

END-USER WEB PORTAL

Tubular Pro was designed to collect and share inspection data across the operational supply chain which includes customers and end-users. Tubular Pro provides an End-User web portal where customers can access all their critical inspection and analysis data from any web browsers or mobile device.

Inspection Data Segregation

Tubular Pro natively separates all inspection data by customer and end-users.

End-User Web Portal

Tubular Pro's web portal lets end-users securely manage inspection data.

White Label & Branding

Tubular Pro lets customers white-label with their own branding.

Application Features & Benefits

Tubular Profiles

Supports all tubular types: drill pipe, OCTG, casing, tubing, accessories.

End-Users & Access

Add multiple users, rigs, and logins.

Sites & Providers

Manage sites and service providers for job and pipe transfers.

Attachments & Notes

Upload documents, images, and customer notes per inspection.

Map View

See jobs and inventory by location.

RFID

Supports UHF, HF, and NFC frequencies.

UT Integration

Compatible with major UT inspection systems.
