6.2. Summary of Smelter and Refiner Status 14

1. Introduction

This Conflict Minerals Report for the year ended December 31, 2025, outlines Hypertechnologie Ciara Inc.'s approach to responsible mineral sourcing and the due diligence activities undertaken throughout the reporting period. The report has been prepared in accordance with our Responsibly Sourced Minerals Policy and supports our commitment to ethical business practices, human rights, and responsible supply chain management.

Conflict minerals currently include tantalum, tin, tungsten, and gold (3TG), which are commonly used in electronic components and are necessary to the functionality of many of our hardware products. As a technology manufacturer, Hypertechnologie Ciara recognizes its responsibility to understand and address potential risks associated with the sourcing of these minerals.

Our responsible minerals program is designed to align with the requirements of Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act and the guidance provided by the Organisation for Economic Co-operation and Development (OECD) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (CAHRAs). As part of this program, we conduct a Reasonable Country of Origin Inquiry (RCOI) and perform risk-based due diligence to assess whether the minerals contained in our products may have originated from the Democratic Republic of the Congo (DRC) or adjoining countries and whether their extraction, transport, or trade may have directly or indirectly contributed to armed conflict or human rights abuses.

Hypertechnologie Ciara is committed to sourcing minerals in a manner that respects human rights, promotes ethical business conduct, and supports sustainable economic development. Our objective is not to avoid sourcing minerals from the DRC, adjoining countries, or other conflict-affected and high-risk areas. Rather, we seek to support legitimate and responsible sources that do not contribute to armed conflict, corruption, forced labour, child labour, or other human rights violations.

We recognize that responsible mineral sourcing requires collaboration across the global supply chain. Governments, industry associations, suppliers, civil society organizations, and non-governmental organizations all play an important role in improving transparency and traceability within mineral supply chains. To support these efforts, Hypertechnologie Ciara has been an active member of the Responsible Minerals Initiative (RMI) since 2020 and participates in industry programs that promote responsible sourcing practices and continuous improvement throughout the minerals supply chain.

As part of our broader human rights and sustainability strategy, we continue to assess mineral sourcing risks beyond the traditional conflict minerals scope and monitor emerging risks associated with Conflict-Affected and High-Risk Areas worldwide. This report summarizes the due diligence measures implemented during 2025 and the results of our responsible minerals program.

2. Objectives

Hypertechnologie Ciara Inc.'s responsible minerals program is designed to strengthen supply chain transparency, support responsible sourcing practices, and mitigate risks associated with conflict minerals. Through internal controls, supplier engagement, and participation in industry initiatives, we pursue the following objectives:

- Promote the participation of smelters and refiners in independent third-party assessment programs aligned with the OECD Due Diligence Guidance, such as the Responsible Minerals Assurance Process (RMAP) administered by the Responsible Minerals Initiative (RMI).
- Encourage smelters and refiners within our supply chain to successfully complete independent assessments, including RMAP audits, that evaluate conformance with internationally recognized responsible sourcing standards.
- Support transparency and accountability by encouraging smelters and refiners to publicly demonstrate their commitment to responsible sourcing through participation in recognized industry programs and associations, including RMI, the London Bullion Market Association (LBMA), and the Responsible Jewellery Council (RJC).
- Align our due diligence activities with internationally recognized responsible mineral sourcing strategies applicable to Conflict-Affected and High-Risk Areas (CAHRAs), including the Democratic Republic of the Congo (DRC) and adjoining countries. These strategies focus on:
    - Supply chain due diligence and risk assessment
    - Independent assessments and on-site audits
    - Governance and accountability
    - Capacity building and continuous improvement
    - Supply chain traceability and transparency
    - Mitigation of environmental, social, and governance (ESG) risks
    - Stakeholder engagement and collaboration
- Demonstrate our commitment to responsible sourcing by actively participating in industry initiatives and leveraging recognized tools and resources that support supply chain transparency, risk management, and continuous improvement.

3. Scope

- This report covers the whole product portfolio based on the substance inventory of our materials (components and parts)
- This report covers the Participation of Smelters and Refiners in a third-party mechanism that is aligned with the OECD Due Diligence Guidance for Supply Chains of Minerals Regions from «Conflict-Affected and High-Risk Areas (CAHRAs)» and assesses due diligence for sourcing from «Covered Countries or Conflict-Affected and High-Risk.

- This report covers the assessment of the «Responsible Minerals Initiatives (RMI)» specifically the Upstream Assessment Program under the Responsible Minerals Assurance Process (RMAP)
- This report does not cover Smelters and Refiners of Recycled or Scrap minerals, which are covered by the Downstream Assessment Program of RMI.

4. Definitions

- **Conflict Mineral:** As defined in 2010 United States legislation, Dodd-Frank Wall Street Reform and Consumer Protection Act, Section 1502(e)(4): CONFLICT MINERAL.—The term ''conflict mineral'' means—(A) columbite-tantalite (coltan), cassiterite, gold, wolframite, or their derivatives; or (B) any other mineral or its derivatives determined by the Secretary of State to be financing conflict in the Democratic Republic of the Congo or an adjoining country.
- **Conflict-affected and High-Risk Areas (CAHRA)**: These are areas in a state of armed conflict, fragile post-conflict areas, as well as areas witnessing weak or non-existing governance and security, such as failed states, and widespread and systematic violations of international law, including human rights abuses.
- **DRC:** Democratic Republic of Congo.
- **Gold (Au) refiner (smelter): A** gold refiner is a metallurgical operation that produces fine gold with a concentration of 99.5% or higher from gold and gold-bearing materials with lower concentrations.
- **OECD:** Organization for Economic Co-operation and Development.
- **RBA:** Responsible Business Alliance**.**
- **SOR:** Smelter or Refiner
- **Recycled or Scrap Sources:** Recycled or scrap sources are recycled metals that are reclaimed end-user or post-consumer products or scrap-processed metals created during product manufacturing. Recycled metal includes excess, obsolete, defective, and scrap metal materials that contain refined or processed metals that are appropriate to recycle in the production of tin, tantalum, tungsten, and/or gold. Minerals partially processed, unprocessed or byproducts from other ores are not included in the definition of recycled metal.
- **Responsible Minerals Assurance Process (RMAP):** The Responsible Minerals Assurance Process (RMAP) is a process developed by the RBA to enhance the company's capability to verify the responsible sourcing of metals.
- **Responsible Minerals Initiative:** Founded in 2008 by members of the Responsible Business Alliance, the Responsible Minerals Initiative has grown into one of the most utilized and respected resources for companies addressing conflict minerals issues in their supply chains. Over 360 companies from 10 different industries participate in the RMI

today, contributing to a range of tools and resources, including the Responsible Minerals Assurance Process, the Conflict Minerals Reporting Template, Reasonable Country of Origin Inquiry data, and a range of guidance documents on conflict minerals sourcing. The RMI also runs regular workshops on conflict minerals issues and contributes to policy development and debates with leading civil society organizations and governments.

- **RMAP Conformant Smelter List:** The Responsible Minerals Assurance Process (RMAP) Conformant Smelter List is a published list of smelters and refiners that have undergone assessment through the RMAP, a program of the Responsible Minerals Initiative (RMI) or industry equivalent program (such as Responsible Jewellery Council or London Bullion Market Association) and have been validated to be in conformance with the protocols. If a smelter or refiner is not on the list, it has either not completed a RMAP assessment or is not in conformance with the RMAP protocol.
- **SEC:** U.S. Securities and Exchange Commission.
- **Smelter:** A smelter or refiner is a company that procures and processes mineral ore, slag, and/or materials from recycled or scrap sources into refined metal or metal-containing intermediate products. The output can be pure (99.5% or greater) metals, powders, ingots, bars, grains, oxides, or salts. The terms "smelter" and "refiner" are used interchangeably throughout various publications.
- **Smelter Identification Number:** A unique identification number the RMI assigns to companies that have been reported by members of the supply chain as smelters or refiners, whether or not they have been verified to meet the characteristics of smelters or refiners as defined in the RMAP audit protocols.
- **Tantalum (Ta) smelter:** A tantalum smelter (also known as a processor) is defined as a company that converts Ta-containing ores, concentrates, slags or secondary materials into tantalum intermediate products or other tantalum-containing products for direct sales or further processing into Ta-containing products, such as Ta powders, Ta components, Ta oxides, alloys, wires, sintered bars, etc.
- **Tin (Sn) smelter:** Primary [tin] smelters are companies with one or more facilities treating tin-containing ore concentrates in order to produce tin metal. Secondary [tin] smelters are companies with one or more facilities that treat secondary materials by reducing the production of crude or higher-grade tin or tin products such as solder. A smelter, as referred to within this audit protocol, may operate as either one or both types of business operation.
- **Tungsten (W) smelter:** A company with one or more facilities that convert W-containing ores (such as wolframite and scheelite), W concentrates, or W-bearing scrap (secondary material) into tungsten-containing intermediates such as Ammonium Para-Tungstate (APT), Ammonium Meta-Tungstate (AMT), ferrotungsten, and tungsten oxides for direct sales or further processed into W-containing products (such as W powder or W-carbide powder).

- **Dodd-Frank :** 2010 United States legislation, Dodd-Frank Wall Street Reform and Consumer Protection Act, Section 1502 ("Dodd-Frank")

5. Description

Hypertechnologie Ciara has implemented its responsible sourcing conflict mineral program, and it is described as follows:

Step 1: Establish Strong Company Management Systems

Responsible Minerals Policy: Hypertechnologie Ciara is committed to sourcing minerals responsibly and ethically. Through our Responsibly Sourced Minerals Policy and our commitment to the Responsible Business Alliance (RBA) Code of Conduct, we require suppliers to support responsible sourcing practices and conduct appropriate due diligence within their own supply chains. Our policy is publicly available on our website: https://hypertec.com/sustainability

Governance: The QA & Sustainability team is responsible for the development, implementation, and oversight of Hypertechnologie Ciara's Responsible Minerals Program. This initiative is supported by the Compliance, Supply Chain, Product Management, and Sales teams. The QA & Sustainability works closely with the Supply Chain team to assess and manage supply chain risks related to conflict minerals. It is also responsible for responding to customer inquiries regarding the sourcing of conflict minerals in products sold by Hypertechnologie Ciara.

System of controls and transparency and Traceability: To improve supply chain transparency, Hypertechnologie Ciara uses the Responsible Minerals Initiative (RMI) Conflict Minerals Reporting Template (CMRT). Relevant suppliers are required to complete and submit the CMRT annually, providing information regarding the smelters and refiners (SORs) in their supply chains and the country of origin of the minerals contained in supplied products.

Supplier Engagement: Responsible sourcing expectations are communicated through our Responsibly Sourced Minerals Policy, supplier requirements, and purchasing processes. Suppliers are expected to acknowledge these requirements or demonstrate alignment with equivalent responsible sourcing program

Grievance Mechanism: Hypertechnologie Ciara maintains a grievance mechanism through its Social Accountability Management System to allow stakeholders to raise concerns related to human rights, ethical conduct, and responsible sourcing practices. Concerns related to smelters and refiners participating in the Responsible Minerals Assurance Process (RMAP) may also be reported through the Responsible Minerals Initiative's Minerals Grievance Platform: https://www.responsiblemineralsinitiative.org/rmap/grievance-mechanism/.

Step 2: Identify and Assess Risk in the Supply Chain

- **Identification of suppliers** by defining the relevant products in the scope of the conflict minerals program in the whole product portfolio corresponding to 3TGs (Gold, Tin, Tungsten, and Tantalum). The identified relevant suppliers belong to our material category, such as microelectronic and/or materials manufacturers (components and parts). Relevant actors of the purpose of this report include smelters and refiners, which are sourced by the 3TGs Mines. Moreover, smelters and refiners of the recycled and scrap minerals are also identified but are not part of the due diligence process as they do not meet the definition of a smelter or refiner according to the applicable RMAP standard. https://www.responsiblemineralsinitiative.org/minerals-due-diligence/standards/
- **Request information from relevant suppliers by** using the CMRT to collect yearly the names of the SOR(s) from the identified suppliers, which is the conflict mineral reporting template that facilitates the transfer of information through the supply chain regarding the mineral country of origin and the smelters and refiners being utilized. The template also facilitates the identification of new smelters and refiners to potentially undergo an audit via the RMI's Responsible Minerals Assurance Process (RMAP). Prior to a new vendor being approved, it will be asked to supply a CMRT. If an incomplete or unsatisfactory response is provided, the potential vendor will be disqualified.
- **Use the Reasonable Country of Origin Inquiry Data (RCOI)** provided by the responsible minerals' initiatives. This list provides country of origin information for the mined material of conformant smelters and refiners in the RMAP and gold refiners that have successfully completed a cross-recognized assessment through the London Bullion Market Association (LBMA) or Responsible Jewelry Council (RJC). RCOI data is released by the RMI on a bimonthly basis.
- **Compare SOR(s) identified by the supply chain to assess possible risks:** The QA & Sustainability team compares the names of the SOR(s) listed in the CMRTs against the CFSI (Conflict-Free Smelter Initiative) Conflict-Free Smelter Program list from RMI through the Facility Data Base platform. https://www.responsiblemineralsinitiative.org/facility-links/facility-database/. Moreover, the QA & Sustainability team reviews smelter status every six months by consulting the RMI Facility Database to reassess each smelter's status and update audit dates within the defined review period.

Hypertechnologie Ciara Inc. Conflict Minerals Supply Chain

Step 3: Risk Management

Establishing the Red flag triggers by SORs through the requirement of our direct suppliers: this process is evaluated through the RMAP audits by RMI. The following red flags trigger further due diligence to be conducted by SORs:

- Unidentified smelters
- The minerals originate from or have been transported via a conflict-affected or high-risk area.
- The minerals are claimed to originate from a country that has limited known reserves, likely resources, or expected production levels of the mineral in question.
- The minerals are claimed to originate from a country in which minerals from conflict-affected and high-risk areas are known to transit.
- The company's suppliers or other known upstream companies have shareholders or other interests in companies that supply minerals from or operate in the above mentioned red flag locations of mineral origin and transit.
- The company's suppliers or other known upstream companies are known to have sourced minerals from a red flag location of mineral origin or transit in the last 12 months.

Due diligence review: since Hypertechnologie Ciara is not directly in contact with SORs, the QA & sustainability team is performing a documentation-based review as follows:

- Independent assessment or validation schemes such as RMAP and cross-recognized upstream mechanisms established by RMI.

- Statements or other assertions of SOR(s), such as public commitments about their policies, initiatives, certifications, and accredited members of industry associations.
- Indirect information (such as smelter location, metal association reports, independent reports, UN reports, etc.)

Third-party assessment: Regarding the responsible sourcing conflict mineral program on the third-party assessments of smelters and refiners executed by RMI through the RMAP, we take into account the audit cycle period and the eligibility of the smelter and refiner. Therefore, we follow the eligibility status stated by RMI, which consists of conformant and active status. Active status means that smelters and refiners who have committed to undergo an RMAP assessment have completed the relevant documents and scheduled the on-site assessment. These may be in the pre-assessment, assessment, or corrective-action phases of the assessment. The audit cycle is based on a 1-year Standard assessment period for RMAP smelters and a 3-year Assessment period for smelters in a Risk-Based Audit Program and TI-CMC (Tungsten Industry Conflict Mineral Council) members. The conformant list includes the names, locations and links to supply chain policies of all refiners that are conformant with the relevant RMAP Standards. This includes gold refiners that have successfully completed a cross-recognized assessment with either the London Bullion Market Association (LBMA) or the Responsible Jewelry Council (RJC). The definition of a complaint is that the SOR is enrolled in the RMI conflict mineral program.

SOR status under RMI	Description
Conformant	Smelters and refiners that are conformant with the relevant RMAP Standards and have successfully completed a cross-recognized assessment in the case of gold SORs.
Active	Smelters and refiners who have committed to undergo an RMAP assessment completed the relevant documents and scheduled the on-site assessment. These may be in the pre-assessment, assessment, or corrective-action phases of the assessment.
Non-conformant	Smelters and refiners that are not conformant with the relevant RMAP Standards.

Risk evaluation: By having this previous mineral supply chain structure, Hypertechnologie Ciara is able to determine the risk of Smelter and Refiners by categorizing them as low, medium, and high risk.

- The low-risk smelters and refiners are the ones that are categorized Conformant and Complaint by RMI based on the RMAP audit report, not classified high- risk location and no findings founded.
- The medium-risk smelter and refiners are the ones that are categorized compliant, active, not classified as high-risk location, findings founded, or Not members of RMI, but are members of LBMA and RJC.

- The high risk of smelters and refiners is defined by its geographic risk as high-risk location and RMAP status non-conformant and non-compliant and findings found.

We use the RMI's Global Risk Map provided by RMI to its members. Moreover, Russia is considered a high-risk country, determined by the Good Delivery Current List Gold, due to the political instability that impacts human rights, governance, and conflict areas. We also identified the country of origin mineral sourcing to the SORs under the definition according to the RMI RMAP Standard, and the CAHRAs shall include, at a minimum, countries identified as high-risk by relevant conflict minerals regulation, such as The Democratic Republic of the Congo (DRC) and its nine adjoining countries as outlined in Section 1502 of the Dodd-Frank Act, namely Angola, Burundi, Central African Republic, Republic of the Congo, Rwanda, South Sudan, Tanzania, Uganda, and Zambia; and, the indicative and non-exhaustive list of CAHRAs provided by the European Commission pursuant to Article 14.2 of the European Union Regulation 2017/821.

Risk Level of SOR	Description
Low-Risk	Conformant, Compliant, not classified as a high-risk location, no findings. Re-assessment or Re-audit status "Yes" and/or cross-recognized assessment "Yes" status.
Medium-Risk	Compliant, Active, not classified as a high-risk location, no findings or They are not members of RMI but are members of LBMA and RJC.
High-Risk	Not Compliant, Non-Conformant, classified high-risk location, findings, not cross-recognition assessment, and not members of LBMA and RJC.

Monitoring and actions to be taken: Creating a list to monitor the status of the SOR(s) annually. This monitoring list is called the "SORs Responsible Sourcing Compliance Monitoring List." If SOR (s) cannot be identified or if any other red flag - as described above - is triggered, Hypertechnologie Ciara will require relevant suppliers to encourage sourcing directly from an SOR that participates in an independent validation scheme such as RMI and its recognized upstream mechanisms. In addition to that, we communicate with our direct supplier to encourage SORs to enroll in the RMI.

Step 4: Smelters or Refiners (Third-party due diligence)

- As this step is related to the third-party due diligence of SORs by RMI managing by our direct supplier, Hypertechnologie Ciara only monitors and gives guidelines or instructions through our mineral sourcing policy to our suppliers.
- Hypertechnologie Ciara has been a member of Responsible Business Alliance (RBA) since 2020. Being a member of RBA allows us to be part of the Responsible Minerals Initiative (RMI) which is in compliance with the OECD Due Diligence Guidance for Responsible

Supply Chains of Minerals from Conflict-Affected and High-Risk Areas in the Democratic Republic of the Congo (DRC) and the Great Lakes Region (GLR) of Central Africa. https://www.responsiblemineralsinitiative.org/membership/.

- Being a proactive member, we can contribute to a range of tools and resources, including the Responsible Minerals Assurance Process RMAP (3TG and cobalt), Risk Readiness Assessment (RRA), Minerals Reporting Templates (3TG and cobalt), industry-wide grievance mechanism, Reasonable Country of Origin Inquiry data (RCOI), RMI Learning Academy, public global smelter/refiners lists, and a range of practical guidance documents for industry.
- Hypertechnologie Ciara does not have a direct business relationship with SOR(s). To support an independent audit approach and minimize the risks of sourcing from illegal and risky sources, Hypertechnologie Ciara shares the following instructions with all its existing suppliers:
  - Suppliers must map their supply chain back to the mines the SOR(s) extract the minerals from. This must be reported yearly by completing the Conflict Minerals Reporting Template (CMRT) to identify the SOR(s) and the country of origin of the conflict minerals. This report must include complete information regarding all SOR(s) under the scope. Any changes affecting the information disclosed in the CMRT within the yearly reporting period must be promptly reported to Hypertechnologie Ciara;
  - Suppliers must only source conflict minerals from SOR(s) that have been passed successfully the RMAP audits being “conflict-free” compliant by RMI.
  - Suppliers must not use any products that would not come from these conformant or active SOR(s);
  - Documentary evidence of the audit must be provided when requested, or it is required directly to the RMI as a member of RBA.
  - If suppliers become aware that they may have sourced conflict minerals from any Covered Countries or that the minerals may have directly or indirectly financed or benefited armed groups, the suppliers must immediately notify Hypertechnologie Ciara in writing; the concerned buyer must also be copied. Notifications must include reasonable tracking information to identify which goods may have been affected and
  - Suppliers must promptly notify Hypertechnologie Ciara of all failures to meet the reporting, sourcing, and due diligence requirements.

Step 5: Reporting

- Hypertechnologie Ciara annually discloses the results of its supply chain due diligence on its corporate web page with a focus on conflict minerals. In this disclosure, Hypertechnologie Ciara reports the results of its RCOI, which is complemented by the SOR level risk, public commitments links, and the public RMAP audit link from the RMI

website. In sum, the “Conflict Mineral Disclosure Report” is publicly available on the Hypertechnologie Ciara website.

- Hypertechnologie Ciara has adopted a "Company Level" declaration scope (Option A of the RMI Conflict Minerals Reporting Template v6.6),
- Smelters and Refiners of Recycled or scrap minerals are excluded from the calculation of Smelters and Refiners under this process and the annual Conflict Mineral Disclosure report as they belong to the Downstream Assessment Program.

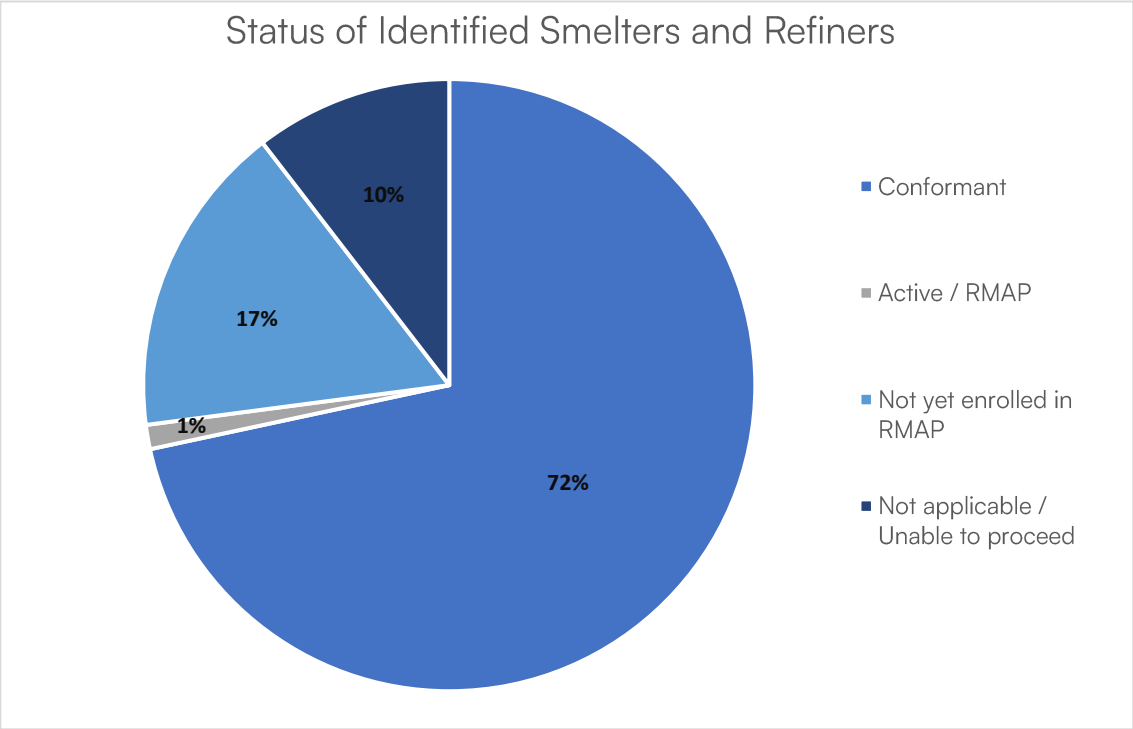

6. Conclusions

- Hypertechnologie Ciara is committed to actively participating in the RMI working groups as a small and medium enterprise in the technology industry.
- Being a member of RBA and RMI allows Hypertechnologie Ciara to access the Reasonable Country of Origin Inquiry Data (RCOI) and RMAP audit reports to execute its due diligence process. In addition to that, encourage direct suppliers and sub-tier suppliers (SORs) to enroll in RMI’s program and utilize the due diligence resources and tools.
- Hypertechnologie Ciara's due diligence process is based on a documentary review supported by the RCOI, the RMAP third-party audit report, and public commitments of each smelter and refiner that belongs to its mineral supply chain.
- The SORs Responsible Sourcing Compliance Monitoring List tracks Hypertechnologie Ciara's due diligence process. The structured data allows Hypertechnologie Ciara to determine the risk of the SORs based on a documentary review.
- Smelters and Refiners of Recycled or scrap minerals are excluded from the calculation of Smelters and Refiners under this procedure, as they belong to the Downstream Assessment Program.

6.1. Smelter and Refiner Due Diligence Results

- Hypertechnologie Ciara Inc. conducted its annual conflict minerals due diligence for the reporting period ended December 31, 2025, covering gold, tin, tantalum, and tungsten. The process followed the five-step OECD Due Diligence Guidance framework and the requirements of EPEAT Criterion.
- Through the collection and analysis of Conflict Minerals Reporting Templates (CMRTs) from direct suppliers, Hypertechnologie Ciara identified **469 unique smelters and refiners (SORs)**. All identified SORs were cross-referenced against the RMI Active and Conformant Facilities List to determine their RMAP assessment status.

- Of these 469 SORs, **336 (72%) are Conformant** and **6 (1%) are Active** with the Responsible Minerals Assurance Process (RMAP), for a combined total of **342 eligible SORs (73%)**.
- An additional **78 SORs (17%) have not yet achieved RMAP** conformance, including 36 (8%) classified as Non-Conformant and 42 with communication suspended or outreach required. Hypertechnologie Ciara has formally notified each relevant supplier and requested corrective action plans within a six-month remediation period
- The remaining **49 SORs (10%) are either not applicable for RMAP assessment or unable to proceed**. This group includes 14 Russian Federation facilities that cannot participate in the RMAP due to current geopolitical circumstances, and 13 Indonesian tin processors that do not meet the RMI's eligibility criteria for smelter assessment.

6.2. Summary of Smelter and Refiner Status

Smelter ID	Metal	Smelter / Refiner Name	Country	Status (RMI)	Eligibility
CID002708	Gold	Abington Reldan Metals, LLC	UNITED STATES OF AMERICA	Conformant	Yes
CID000015	Gold	Advanced Chemical Company	UNITED STATES OF AMERICA	Conformant	Yes

Smelter ID	Metal	Smelter / Refiner Name	Country	Status (RMI)	Eligibility
CID000035	Gold	Agosi AG	GERMANY	Conformant	Yes
CID000017	Gold	Agosi AG	Germany	Conformant	Yes
CID000019	Gold	Aida Chemical Industries Co., Ltd.	JAPAN	Conformant	Yes
CID000041	Gold	Almalyk Mining and Metallurgical Complex (AMMC)	UZBEKISTAN	Conformant	Yes
