

StretchLoc™ Tension Straps

StretchLoc™ Mounting Attachment System

Corrugated converters continue to look for methods to reduce press setup time. Container Graphics Corporation offers a superior tension strap product for mounting plates to the print cylinder that addresses converters' needs.

The straps can be shipped with the printing plate and are designed to stay with the printing plate in storage to make setup fast

the first time and each time the plate is used. They stay permanently attached in use and in storage; however, the straps are designed to be easily removed manually, if desired.

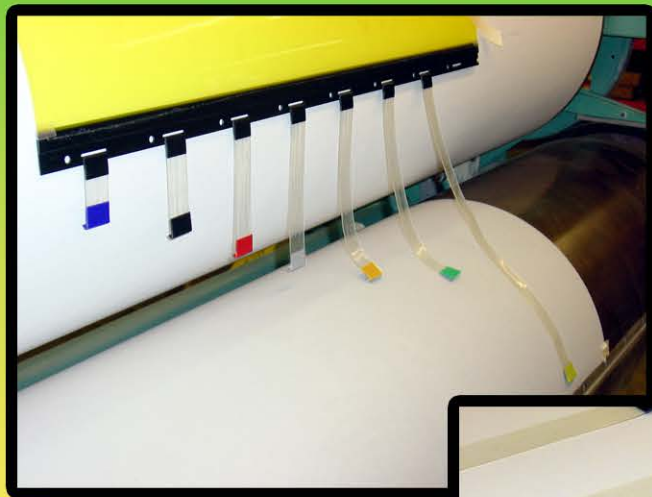

The unique, two hook/end tension belt concept is available in seven color-coded, fixed lengths. The strap has a J hook end for attaching it to a plate mount trail edge slot, and a 45 degree hook end for attaching it to the press plate cylinder latch slot.
