

Diep Sleep
BY EULER™

LUXURY, ENGINEERED FOR ALTITUDE.

Intuitive design meets elevated expectations. Purpose-built for private aviation, our in-flight systems and cabin compliments deliver uncompromising comfort and elegant functionality.

THIS IS THE BED
YOU HAVE BEEN
DREAMING OF

CLUB SEAT | CREW REST | CONFERENCE GROUPING | DIVAN | FIXED BED

The Diep Sleep System™ by Euler Products™ brings everything you’ve come to expect from private jet travel to the sleep experience. Handcrafted and bespoke, the Diep Sleep System fits into the interior of your aircraft seamlessly, deploys and stows away effortlessly, and delivers a sound sleep, incomparably. It’s simply the bed of your dreams.

Unlike in-flight bed systems that inflate, the Diep Sleep System removes the need for a noisy air pump. It sets up quickly, doesn’t impede cabin airflow, and is 100% reliable. So, you can leave worries, patch kits, and wasted time behind.

In fewer than 30 seconds, the Diep Sleep System transforms from an amazingly compact package into a stable, supremely comfortable bed. The sturdy platform gives completely lay-flat support for the memory foam mattress. This means no lumps. No bumps. Nothing to distract from perfect repose.

To ensure complete comfort to match your liking, each memory foam mattress is available in three comfort levels– from soft to firm– the perfect place for restful slumber for up to two people. So, stretch, yawn, lie back and relax.

When you awaken, the entire system folds and stows into its ingeniously compact and stylish package in less than one minute.

Each bed is completely custom and sized to fit your aircraft. Handmade from fine woods, high-quality leathers and plating options to suit your personal taste and match your interior, your Diep Sleep System feels and looks as though it was made for your aircraft– because it is.

Thoughtfully designed with ultimate quality, efficiency, comfort and luxury in mind, the Diep Sleep System delivers an exceptional travel sleep experience.

SYSTEM

Designed and made in USA. US Patent Pending
FAR 25.853(a)(c) Compliant. Flame Retardant and Tested per ASTM D3575.

TRUE COMFORT ON A PERSONAL LEVEL

It doesn't matter how ingenious the design is if your bed isn't comfortable! Rest assured, as much thought and care is put into our mattress as the rest of the Diep Sleep System. In fact, our mattresses come with a five-year* warranty.

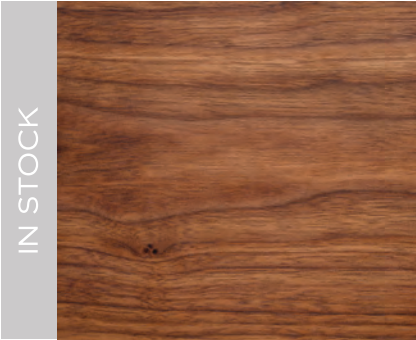

Each mattress comprises three layers of the highest quality foam in thicknesses limited only by your personal preference. Choose from our standard offering of soft, medium or firm, or

specify your desired custom height. Standard mattresses available at three-, four-, five- or six-inch height. Customized mattresses built to any size or height upon request.

We'll build it, then cover it in 100% refined flannel Chilean wool. Visually handsome, with a cashmere feel, this fabric is naturally flame retardant. From takeoff to drift off, rest easy knowing you'll soon sink into cloud-like, personalized comfort.

*Prorated (details available upon request).

CUSTOM TAILORED JUST FOR YOU

The Diep Sleep System is fully customizable. So, we'll build it to both fit and match your aircraft interior and your unique style preferences. We've curated palettes to suit the most discerning of styles in the highest quality

woods, leathers and metal finishes. Select from an array of beautiful materials and to make each bed entirely your own.

IN STOCK

In stock materials are available with no delay or additional cost.

SPECIAL ORDER

These color and finish selections are not guaranteed to be immediately available and thus may add production time and special order fees.

US PATENT NO. 11,299,277 B2

All mattress component materials have passed the 14CFR 25.853(a) 12-second vertical burn test. Further enhancing safety, our mattress has also passed the 16CFR 1633 mattress fire test, which requires a substantial open flame impinged upon the mattress assembly.

The exceptional physical properties of the mattress have been confirmed through rigorous dynamic compression and IFD fatigue loss testing per ASTM D3574 i3.
