

TREATMENT OF BLEEDING

- instructions for using Tranexamic acid

Preventive treatment

- 1 ampoule mixed with 100 ml of physiological saline
- A mouthful is held in the mouth for 2-3 minutes and then spit out
- Repeat 3-4 times daily for 1.5 weeks

Treatment for acute bleeding

- A gauze pad is soaked in "pure" Tranexamic acid and applied to the tooth socket
- Chew gently to create a compress
- Keep the gauze pad in the mouth for at least 15 minutes or until the bleeding stops
- If the bleeding doesn't stop, call the clinic or your nearest emergency room
