

Teamwork • Integrity • Initiative • Innovation

Value Proposition

Since our founding in 2014, T3i has aggressively worked to solve complex customer challenges with innovative solutions, drawing on our diverse experience in special operations, conventional forces, combat support, tactical cyber, unmanned systems, and human performance.

At T3i, we proactively listen to and embrace our customers' concerns, needs, and desires, making their priorities our own. We take calculated risks to develop and implement innovative ideas and new technologies to advance our customers' missions and ensure their success.

T3i's cost-conscious staffing and management, combined with a commitment to professional development, profit sharing, and equity ownership, fosters exceptional retention and provides customers with critical continuity and institutional knowledge.

Our Solutions

Unmanned Systems: We deliver industry-leading C-UAS and FPV solutions - from mission-ready systems and field service support to immersive training that prepares units for real-world operations. Our tactical drone training (ISR and FPV) programs are designed for small-unit integration with full-mission profiles, teaching offensive and defensive tactical flying and ordnance delivery, and one-way-attack scenarios. We design, manufacture, program, and field our purpose-built FPV weapon system, Blackfoot, ensuring hardware, software, and training are tightly integrated for maximum operational support.

SERE Training & Exercises: Since 2020, we have provided continuous support to four distinct Department of War (DoW) Code of Conduct (Level C) SERE (Survival, Evasion, Resistance, and Escape) training programs. Our dedicated full-time SERE instructors (140+) train more than 5,100 students annually - preparing them to survive and return with honor.

Human Performance: We provide tailored HP solutions designed to develop human capabilities while preserving long-term foundational health. Our approach helps customers establish enduring organizations with a focus on fundamentals, continual improvement, and a team-minded culture that benefits the warfighter.

Cyber Operations: We provide advanced network and analytical support to global offensive cyber operations. Our team designs and deploys tactical cyber edge tools, with a focus on low-SWaP payload delivery, radio frequency manipulation, and dynamic C2 solutions to support operations in contested environments.

Data Analytics: We provide advanced data science and analytics expertise to enhance our customers' planning, forecasting, and operational efficiency. Our data analytics teams apply their technical expertise to deliver high-quality data visualization and predictive modeling, enabling data-driven decision-making.

Lone Operator: Our Lone Operator series of courses is designed to provide deploying personnel with personal force protection techniques and combative concepts tailored to the unique demands of solo or small-team operations in today's complex threat environment. This non-sport, street-effective system blends empty-hand, edged weapons, and combat ballistic weapon strategies for the modern low-visibility operator.

Training Services: Our highly specialized team of leaders, cadre, and support personnel deliver a comprehensive suite of both initial and advanced training programs spanning a broad spectrum of mission-critical disciplines—from foundational (SERE) training to cutting-edge instruction and support in attributable offensive drone and CUAS operations.

Vision:
Advance US national security through good ideas, innovation, and hard work.

Mission:
Provide our customers the best services, technologies, and ideas.
