

Cyber-Forest Execution API™ — Integration Options

Backend integration is available on request.

Cyber-Forest Execution API can be integrated directly into client systems, including:

- Custom backend services (Node.js, Python, Java, etc.)
- Google Apps Script (GAS)
- Cloudflare Workers
- Serverless and edge environments
- Internal tools and enterprise platforms

Integration is performed **after event confirmation** and requires only an outbound HTTP POST request.

Managed integration is available for clients who prefer us to handle setup, configuration, and validation.

Short version

Backend, GAS, Cloudflare Workers and serverless integrations are available on request. Managed integration supported.

Sales & marketplace one-liner

Direct backend integration (including GAS and Cloudflare Workers) is supported on request, with optional managed setup.
