

Compliance & Regulatory Execution

Compliance is not documentation.

Compliance is execution.

Legal Tech Counsellor builds compliance as **technical infrastructure**, not as policies, PDFs, or advisory opinions.

We focus on **compliance-by-design** — systems where legal and regulatory requirements are **enforced directly in software**, logged automatically, and ready for audit at any time.

What We Mean by Compliance

Compliance in our context means:

- rules are **machine-enforced**
- actions are **traceable**
- evidence is **generated automatically**
- systems are **audit-ready by default**

No manual checklists.

No “we think we comply”.

Only **provable execution**.

Regulatory Domains We Cover

Data Protection & Privacy (GDPR)

- Consent and access logic
- Purpose limitation enforcement
- Audit logs and evidence trails
- Data handling transparency

AI & Automated Decision-Making (EU AI Act)

Risk-aware system design

Human-in-the-loop controls

Logging of automated decisions

Technical safeguards and traceability

Digital Identity (EUDI Readiness)

Identity and credential flow analysis

Wallet compatibility mapping

Consent and access enforcement

Regulator-facing documentation

Financial & Transactional Compliance

Contract-linked billing logic

VAT and invoicing consistency

Accounting-ready execution

Traceable financial flows

How Compliance Is Implemented

We implement compliance through:

Rule-based execution logic

Infrastructure-level enforcement

Automated audit logs

Exportable compliance evidence

Compliance is **built into the system**, not added later.

Who This Is For

SaaS and platform companies

SMEs operating cross-border

Regulated digital services

Founders preparing for audits, funding, or scale

Outcome

Audit-ready systems

Reduced regulatory risk

Clear execution trace

Confidence in growth

Compliance should slow down violations — not innovation.
