

Legal Tech Counsellor

Execution-Level Legal, FinTech & Identity

Infrastructure for Europe

About the Company

Legal Tech Counsellor is a European LegalTech & FinTech company building execution-level digital infrastructure for businesses operating in regulated and cross-border environments.

We design and deploy systems where law, digital identity, finance, security, and automation work together— not as documentation or advisory services, but as enforced, auditable, and production-ready infrastructure.

Our mission is simple: turn regulatory complexity into scalable digital execution.

Areas of Activity

LegalTech & Contract Automation

AI-driven systems for cross-border contract generation, jurisdiction-aware logic, modular clauses, and audit-ready legal outputs.

FinTech, Invoicing & VAT Automation

Invoice generation, EU VAT logic, accounting-ready exports, and contract-linked billing flows.

Security, IP Protection & Anti-Copy Systems

Infrastructure-level protection including licensing logic, access control, and audit logging.

EUDI Readiness & Digital Identity Compliance

EUDI gap audits, identity flow analysis, wallet compliance mapping, and regulator-ready documentation.

Execution & Compliance Infrastructure

Machine-enforced compliance covering GDPR, EU AI Act, and EUDI principles.

Why It Matters

Europe does not lack regulation; It lacks execution-grade systems that make regulation work.

Product Portfolio

Legal Tech Counsellor

1. ContractBot™

AI Contract Automation Platform

What it is

ContractBot is an AI-powered platform for generating and managing **cross-border B2B contracts** with jurisdiction-aware legal logic.

Why it exists

Traditional contracts are static documents. ContractBot turns contracts into **structured, executable legal components** that integrate with billing, compliance, and identity systems.

What it does

- Generates contracts based on jurisdiction (EU & non-EU)
- Applies modular clauses and compliance inserts
- Produces audit-ready legal documents
- Supports multiple contract types and governing law options

Who it's for

- SMEs operating cross-border
- SaaS companies
- Consultants and service providers
- LegalTech and compliance-driven teams

Status

Active platform / commercial MVP

2. VAT Bot™

EU VAT & Invoicing Automation

What it is

VAT Bot is an automation engine that handles **VAT logic, invoice processing, and reporting** connected directly to contracts and payments.

Why it exists

VAT compliance in Europe is fragmented and manual. VAT Bot removes spreadsheet-driven errors by enforcing VAT rules at execution level.

What it does

- Calculates EU VAT logic
- Generates invoices and reports
- Exports accounting-ready files
- Integrates with billing systems

Who it's for

- Solo founders and SMEs
- Cross-border service providers
- SaaS companies selling in the EU

Status

Active MVP / early commercial use

3. BookkeepBot™

Accounting & Financial Execution Layer

What it is

BookkeepBot connects contracts and invoices to **accounting workflows**, creating a bridge between legal execution and financial reporting.

Why it exists

Accounting systems receive data too late. BookkeepBot ensures financial data is **structured correctly from the start**.

What it does

- Links contracts → invoices → ledger
- Prepares accounting exports
- Supports country-specific accounting logic

Who it's for

- SMEs
- Accounting firms
- SaaS platforms needing clean financial data

Status

Active platform / commercial MVP

4. EUDI Readiness Audit™

EU Digital Identity Compliance Assessment

What it is

A structured **EUDI readiness audit** that evaluates whether a company's systems are prepared for the EU Digital Identity Wallet framework.

Why it exists

Most companies don't know how EUDI applies to their systems. This audit translates regulation into **technical reality**.

What it does

- Performs gap analysis against EUDI requirements
- Reviews identity and consent flows
- Produces regulator-ready documentation
- Provides an implementation roadmap

Who it's for

- SaaS and platform providers
- Regulated digital services
- Identity-dependent applications

■ Status

Active service (48h / 24h Fast Track)

5. CyberForest Shield™

Security, IP Protection & Anti-Copy Infrastructure

What it is

CyberForest Shield is a security layer protecting **digital products, SaaS platforms, and intellectual property**.

Why it exists

Most SaaS products leak IP and data silently. Shield enforces protection **at the infrastructure level**.

What it does

- Prevents copying and scraping
- Controls access and licensing
- Generates security audit logs
- Supports compliance investigations

Who it's for

- SaaS founders
- Digital product creators
- Compliance-sensitive platforms

Status

Active infrastructure module

6. Execution Layer™

Compliance-by-Design Infrastructure

What it is

Execution Layer is the core system that **enforces legal, financial, and identity rules directly in software**.

Why it exists

Policies don't execute themselves. Execution Layer makes compliance **machine-enforceable**.

What it does

- Enforces GDPR, EU AI Act, EUDI principles
- Generates audit trails and evidence
- Applies rule-based execution logic
- Supports regulator-ready exports

Who it's for

- Regulated platforms
- Enterprise SaaS
- Public-facing digital services

Status

Core infrastructure / internal platform

Contracts → Finance → Identity → Security →
Execution
