

Contents Claims Intelligence

Build AI-driven contents valuations directly into your claims operations.

Claimtouch replaces manual research and multiple parallel systems with direct deployment of AI, machine learning and big-data valuation into Snapsheet workflows for a faster, more defensible path to contents settlement.

Tara Smith - 880124			
Loss Date: 4/12/2026			
Item	Submitted	Matched	Status
Dyson V12 Detect Slim	\$649.00	\$589.00	Auto
KitchenAid Stand Mixer	\$499.00	\$399.00	Auto
Samsung 65" QLED TV	\$1,299.00	\$1,097.00	Review
Levi's 501 Jeans (x3)	\$180.00	\$165.00	Auto
RCV	Depreciation	ACV	Deductible Bal
\$4,218.00	(\$612.40)	\$3,605.60	\$2,500.00

Touchless intelligence that eliminates the bottleneck, leakage, and painful delays from one of the most manual processes in property claims.

Control costs at scale

AI matching catches price discrepancies item by item to flag overvalued submissions and applying LKQ (Like Kind and Quality) standards that blanket estimates miss.

Finalize settlements faster

A multi-day contents process becomes an instant AI workflow. Adjusters move from FNOL to settlement-ready in minutes, not days.

Validate in real-time

Every matched value ties to a live, verifiable product listing to give adjusters and admins a clear, documented rationale for every settlement figure.

Valuation starts at intake...

Claimtouch identifies relevant claims and pulls necessary data directly from Snapsheet APIs the moment a contents claim opens.

- ✓ Claim number, loss date, and loss type
- ✓ Policy data, deductibles, and policyholder info
- ✓ Property data, location, and sales tax

... and populate right in the claim file.

Once claimtouch completes its AI-driven valuation, the full results — matched unit prices, depreciation calculations, flagged items, and final ACV — deliver directly into the Snapsheet claim record. Adjusters review and approve without leaving the platform.
