

External Links

Access third party webpages right from the Snpasheet platform.

Extend your unified claim view to include partners, tools, and systems.

Adjusters constantly jump between claim files and external vendor portals, partner platforms, and specialized tools. Every switch breaks focus, slows work, and creates risk for data errors when copying information between systems.

External Links lets you embed third-party web pages directly into a claim file at the exposure level. Whether it's a repair shop portal, fraud detection tool, or partner data system, adjusters can access what they need without opening multiple tabs or losing their place in the claim.

Vendor Management

Open repair shop portals to check estimates, approve work, or view photos without leaving the claim

Risk Detection

Access third-party fraud tools with claim data automatically populated for faster analysis.

Partner Systems

Pull data from TPA platforms, carrier systems, or other external sources mid-workflow

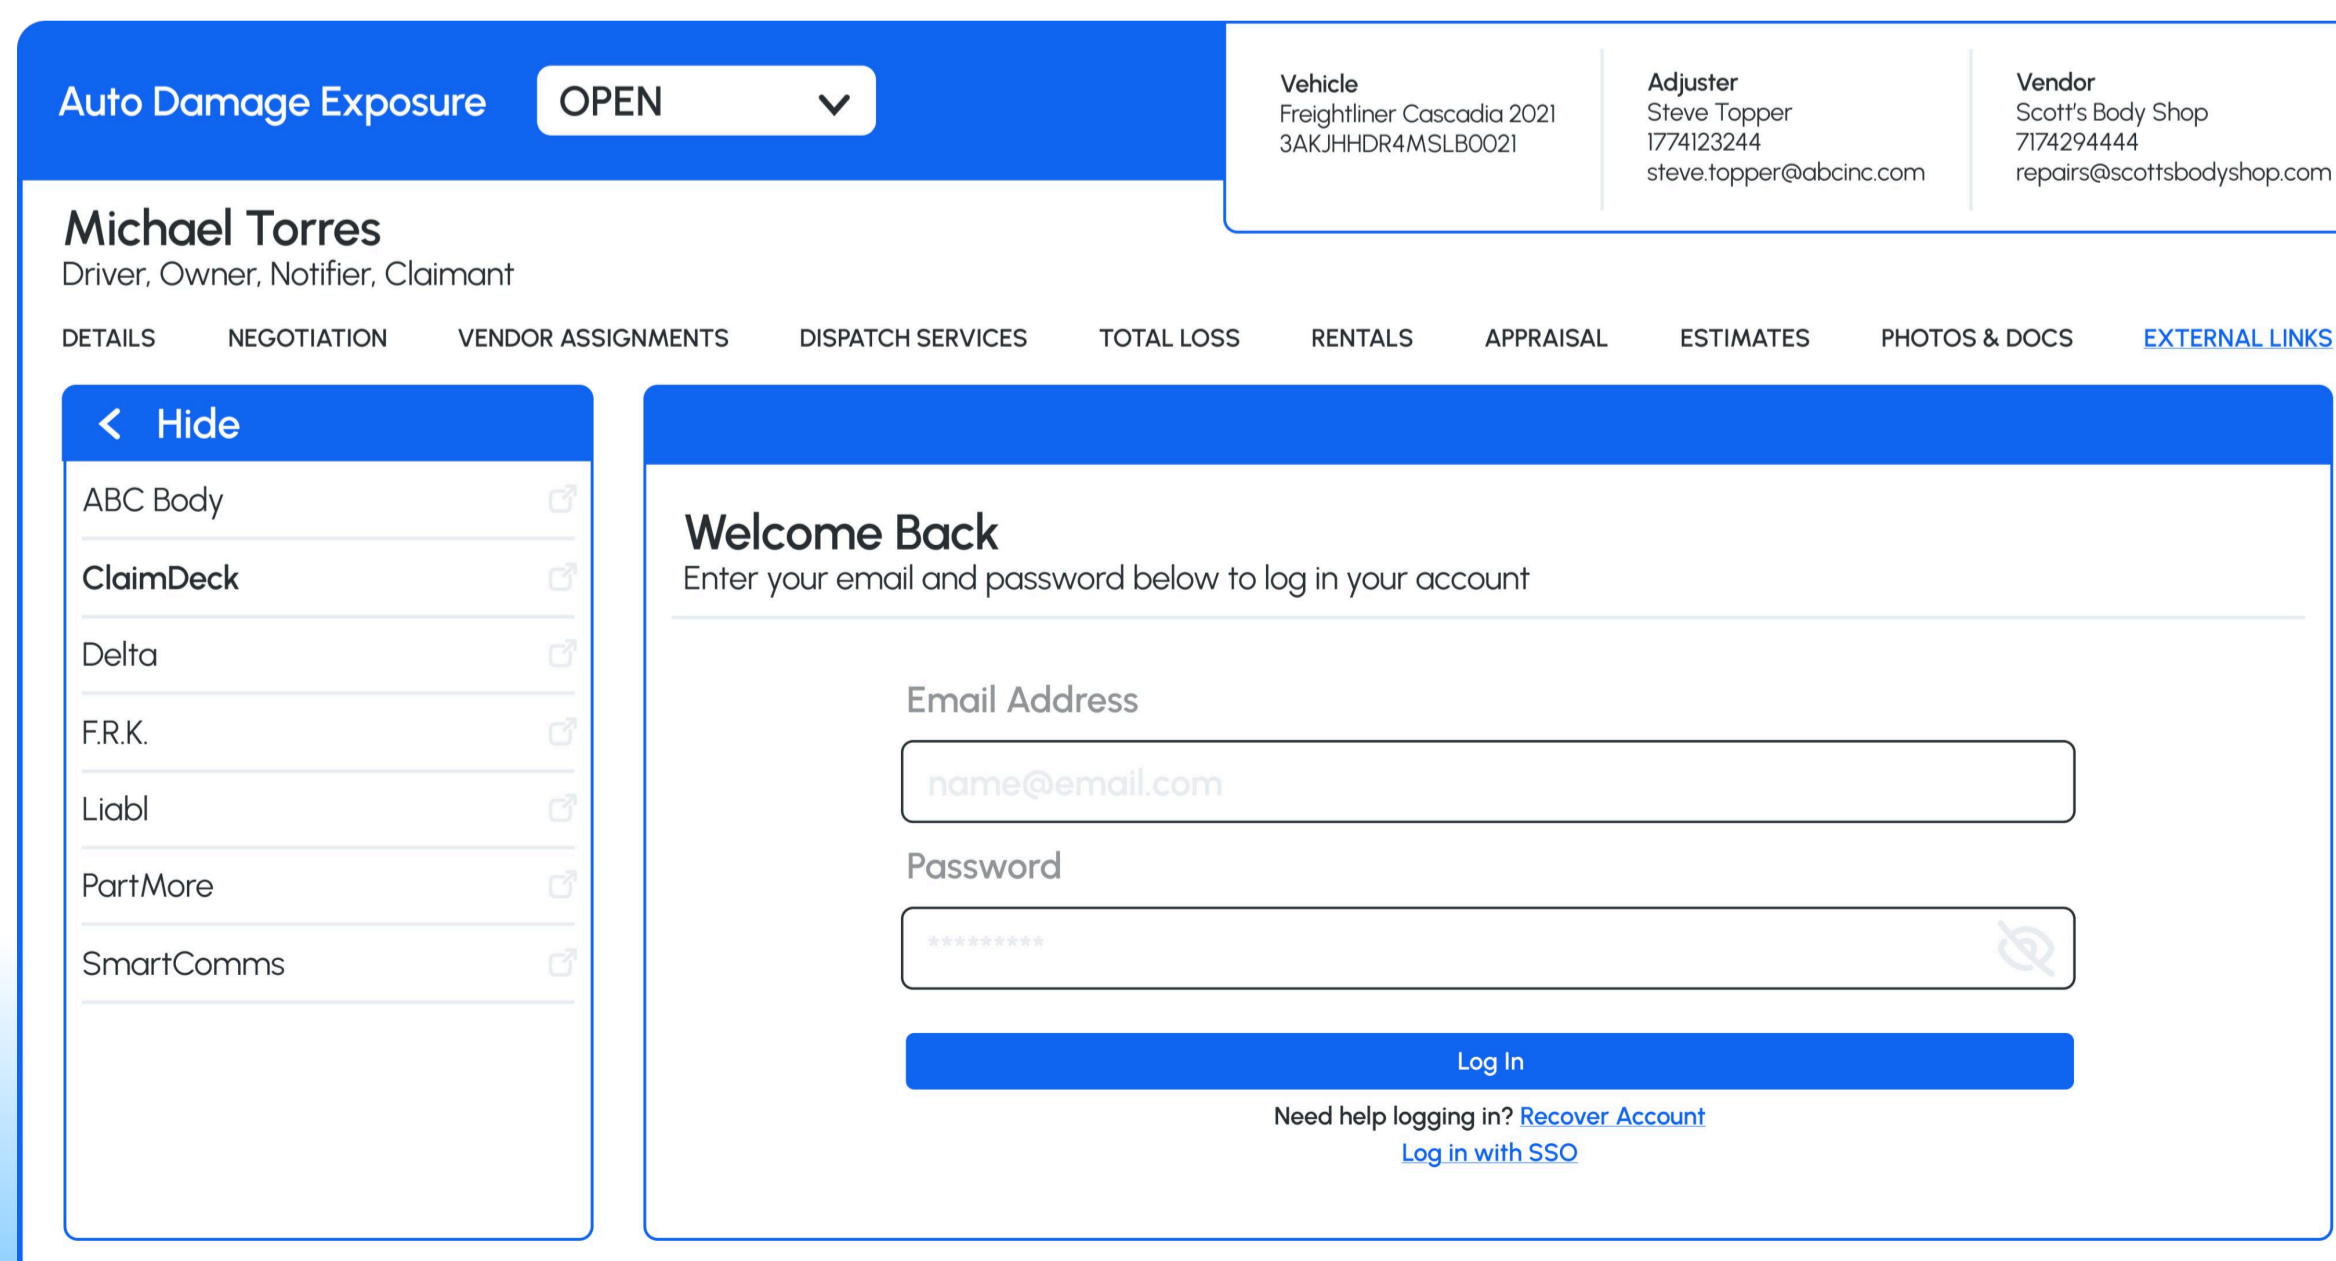

Specialty Tools

Integrate appraisal platforms, parts pricing databases, or LOB-specific applications your team relies on

One system for a superior adjuster experience

No context-switching means faster claim handling and less cognitive load.

Customizable Display

Define display names for each link and set back-end reference codes to keep data aligned.

Automatic Data Passing

Claim IDs, exposure details, and other relevant information populates without requiring manual copy-paste.

Flexible Integration

Connect to any web-based tool or system your team already uses that meets standard tech requirements.
