Street Communication

Introduction of gameplay

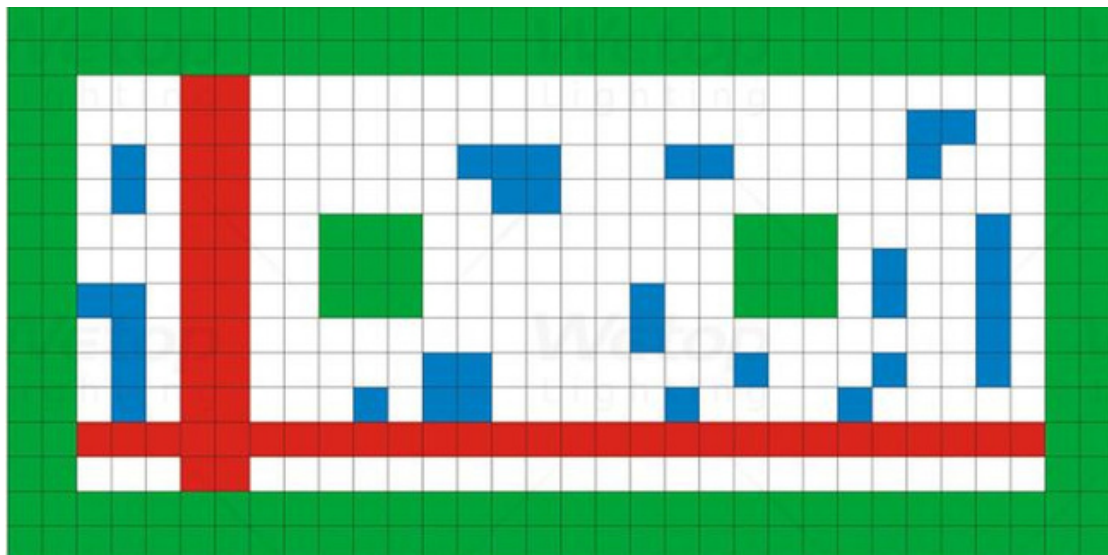

There are LED floor tiles with the same specifications and different colors in the game area (red, blue, green)

Red: danger zone

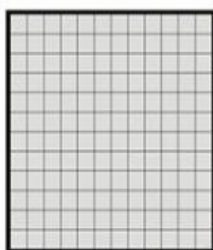

Green: safe zone

Blue:game score zone

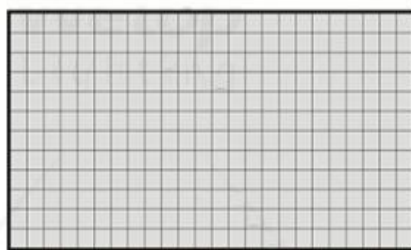

Players not only need to avoid the red grid, but also need to stamp out the blue grid to get scores to pass levels and competitions, Games levels are changeable continuously, adjust the quantity, position and speed of blue grid & red grid to increase the game difficulty and achieve stimulation feel when passing level.(Supports upgrading to more game play modes and multiple game elements)

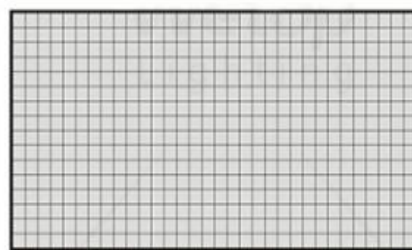

Suggested configuration of games room.

12x12=144 pcs

12x24=288 pcs

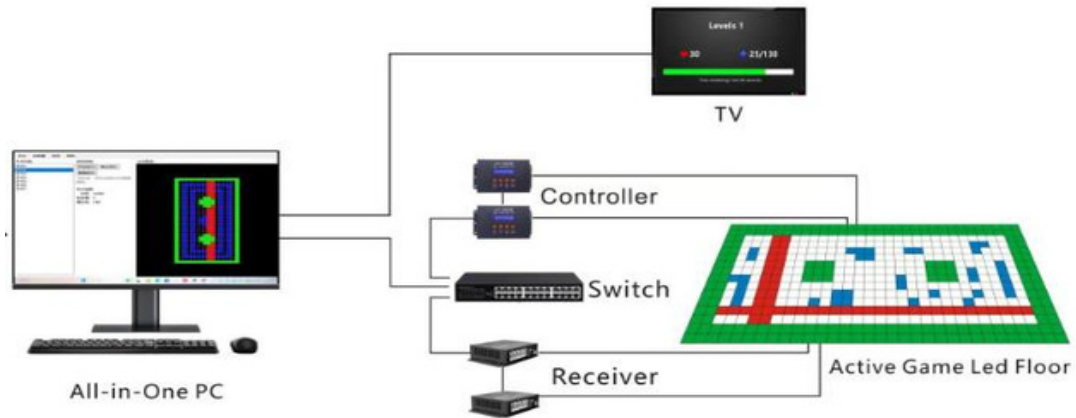

16x32=512 pcs

You can also customize the quantity and place it according to the actual venue
