

Organic-Waste Plant and Lagoon Treatment using **DRP Accelerator®**

Effective Plant and Lagoon Treatment Additive

DRP Accelerator® is a patented multi-function additive that cost-effectively reduces solids and eliminates odors in organic waste treatment lagoons. It contains no formaldehyde, enzymes, or other harmful chemicals, and comes in blocks or powder, which makes it easy to ship, store, and apply.

DRP Accelerator® is a **natural, environmentally friendly** and non-hazardous product. Here are just some of its benefits:

- Accelerates the reproduction of aerobic and facultative bacteria in wastewater systems by up to 40 times, inducing them to consume more organic solids.
- Up to 95% reduction in H₂S and effective elimination of odours.
- Contains no bacteria, enzymes or nitrates.
- Non-toxic (totally safe for people and animals).
- No requirement for costly pumps and other equipment and less wear on existing equipment.
- Effective even where low levels of biocides such as iodine, sodium hypochlorite, and formaldehyde have been used, provided some active bacteria are left alive.
- **DRP Accelerator®** eliminates the need for costly dredging or mechanical removal of organic solids.
- Consumes fats, oils and greases (FOGs).
- No special equipment or systems required.
- Reduces or eliminates pump and sprinkler plugging problems for land applications.
- Results in cleaner water discharge, with little if any organic solids leaving the lagoon.
- Treated water will not harm fish or other aquatic life in lakes or streams.
