

# FRY REGLET

## EXTRUDED ALUMINUM LEED FACT SHEET

PRODUCTS: Trims & Reveals Systems

MATERIAL: Aluminum 6063

Fry Reglet's aluminum profiles are extruded in Newnan, GA 30263, and fabrication and/or distribution of profiles is performed in Alpharetta, GA 30004 or Santa Fe Springs, CA 90670.

The primary raw materials consist of aluminum scrap and various alloys, which are acquired from domestic and foreign producers in open-market purchases.

The recycled content of the aluminum used to produce 6063 aluminum extruded profiles consists approximately of 60% scrap aluminum, of which 55% is post-industrial press scrap and 5% post-consumer. This complies to LEED requirement for recycled content (MR Credits 4.1 and 4.2), and with ISO 14021- 'Environmental Labels and Declarations', where the recycled aluminum content is greater than 50%.

Extruded aluminum profiles do not comply with LEED Regional Materials (MR Credits 5.1 and 5.2) as aluminum is typically extracted, processed, and manufactured in foreign countries.
