BETTER INSIGHTS. BETTER CONVERSATIONS. BETTER PATIENT OUTCOMES.

Welcome to IBD Connect

Every consultation tells part of the story. IBD Connect helps fill in the gaps between appointments.

People living with IBD experience changes in their symptoms every day — not just when they visit the clinic. IBD Connect helps bridge the gap between consultations by encouraging people to track their symptoms over time, complete pre-clinic questionnaires and actively engage in their care.

The result is better prepared patients, more meaningful conversations and greater confidence in clinical decision-making.

Why IBD Connect Matters

Managing IBD extends well beyond the consultation room. Symptoms can change, quality of life fluctuates and it's often difficult to recall important information during appointments.

IBD Connect bridges this gap by encouraging people to record their symptoms between appointments, complete pre-clinic questionnaires and actively engage in their care. The result is better prepared patients, more meaningful consultations and greater confidence in clinical decision-making.

IBD CONNECT

How It Helps Your Practice

SPEND LESS TIME ON ADMINISTRATION

IBD Connect is linked to the Crohn's Colitis Care (CCCare) platform. This enables streamlined collection of pre-clinic questionnaires and reduced paperwork and manual administration, while ensuring patient information is available ahead of appointments.

SUPPORT PATIENTS BETWEEN APPOINTMENTS

IBD Connect encourages people to stay engaged with their condition between appointments, helping them better understand symptom patterns, quality of life and factors that may influence disease activity.

BETTER PREPARED CONSULTATIONS

People arrive having already reflected on their symptoms and completed their questionnaires, allowing consultations to focus on clinical decisions rather than information gathering.

ENCOURAGE CONSUMER EMPOWERMENT

By providing simple, accessible tools for self-monitoring, IBD Connect empowers people to take an active role in managing their health while strengthening conversations with their care team.

A CLEARER PICTURE OF YOUR PATIENT'S JOURNEY

Rather than relying solely on a patient's recollection during an appointment, IBD Connect supports symptom tracking between appointments, that helps everyone recognise patterns and provides valuable context for clinical discussions. As future versions evolve, clinicians will have access to richer longitudinal data that supports more informed decision making.

CONTRIBUTE TO THE FUTURE OF IBD CARE

As clinicians adopt the platform and consumers contribute data over time, the insights generated will help inform future research, improve clinical resources and support the ongoing development of evidence-based care pathways.

Together, we're building a more connected, proactive approach to IBD care.

Supporting Better IBD Outcomes

The ultimate goal of IBD Connect is simple: to help more people achieve remission —and help those already in remission maintain it.

By encouraging regular engagement, improving communication and supporting earlier recognition of changes in IBD activity, IBD Connect aims to strengthen the partnership between clinician and consumer throughout every stage of care.

More Than an App

IBD Connect is designed to complement —not replace—clinical care.

It provides people with practical tools to better understand their condition while giving clinicians confidence that consultations are supported by better prepared patients, streamlined workflows and a growing foundation of meaningful health information.
