

Trading

Trading at a Liechtenstein bank. Execution and settlement run directly against custody, built for performance, reliability and scale.

Institutional Execution. Built to Scale.

Advanced order execution for professional needs. Efficient execution. Reduced market impact.

Deep Liquidity. Direct Access.

Direct connectivity to institutional liquidity providers. Tight spreads, no intermediary layers.

Settlement Within the Bank.

Trade proceeds settle into your Celsion account. No external fiat transfer required.

Licensed Bank. Legal Clarity.

Licensed under Liechtenstein banking law. Authorised under MiCAR.

Without Celsion Bank

Fragmented Setup.
Multiple Providers.

Exchange

Liquidity Provider

Custody

Payments

No single view. No verified control.

Venue fragmentation

Liquidity split-less efficient, harder to oversee

Custody breaks & wallet hops

Friction, delays and settlement risk

Prefunding locked

Capital tied up – not efficiently deployed

Manual reconciliation

Disconnected data across departments

CELSION | BANK

One counterparty.
One regulated environment.

Global Liquidity Network

Settled directly into your Celsion account

One banking relationship

Full settlement visibility

Single-source audit ready reporting

Coming Soon

Extending the Platform

Next capabilities to expand execution, risk control and client connectivity within the same regulated environment.

1

Settlements Limits

Configurable exposure thresholds by asset, counterparty and time period.

2

Derivatives

Cash-settled hedging tools within the same regulated framework.

3

Celsion APIs

Direct connectivity for market data, order flow and automated execution.

4

Scalable Architecture

Built to extend assets, products and workflows without operational fragmentation.
