CELSIUS | BANK

Staking

Staking services for a selection of digital assets, integrated directly into the custody infrasctructure. Full transparency on rewards, fees and risk parameters at point of commitment.

Integrated with Custody

Stake eligible digital assets directly from custody within the same banking environment. Assets remain under established governance, approval and reporting processes throughout the staking lifecycle.

Validator Infrasctructure

Staking is executed through a selected validator framework based on defined operational and risk criteria. Network-specific parameters, validator setup and relevant slashing considerations are disclosed at onboarding.

Transparent Economics

For each supported network, clients receive clear information on estimated reward ranges, applicable fees, payout mechanics and accrual treatment. Reporting supports treasury, audit and accounting processes.

Banking License & MiCAR Authorised

Delivered within a licensed European banking framework with applicable controls for onboarding, governance, custody and service delivery. Regulatory treatment depends on the specific asset and service scope.

Supported Networks

Staking is available for a curated selection of networks meeting our institutional eligibility criteria. Additional networks are added on an ongoing basis as they meet our standards for network maturity, liquidity depth.

Ethereum (ETH)

Solana (SOL)

More on request

Performance Reporting

Transparent reporting of staking results and historical performance.

Reward Payout

Monthly payout, credited directly to the crypto balance in full in the relevant asset.

Fee Structure

Fees are charged separately in CHF, so that the full staking reward remains visible in the crypto balance.

Operational Disclosures

For each supported network, the bank discloses at point of commitment: estimated annual reward range, applicable fee, net return, unbonding period, slashing risk profile, validator setup and relevant regulatory classification. Accrued rewards, validator performance and unbonding status are reflected in standard client reporting.
