

Senior Structural Engineer

Company Overview

Kerkhoff Engineering Ltd. has been providing structural consulting services since 2004. With over 20 years of industry experience, we specialize in complete precast and tilt-up concrete building systems. Working closely with our clients across Western Canada, our diverse team delivers comprehensive design solutions from preliminary 3D renderings and BIM modeling to complete structural steel and precast panel design.

As the precast industry continues to grow, we seek passionate professionals who are eager to grow with us and contribute to our shared success.

Position Summary

We are seeking a technically skilled Senior Structural Engineer to lead and participate in all stages of the design and construction process. You will be responsible for analyzing, designing, and overseeing the construction of various commercial and industrial structures, primarily comprising of precast concrete wall panels, steel roof, and interior structures.

The ideal candidate is a client focused, detail-oriented, professional who thrives in a collaborative team environment. This role offers an exciting opportunity for a result-driven professional who values innovation, collaboration, and high standards of design excellence.

Educational and Professional Requirements:

- BaSc in Civil Engineering at a Canadian Accredited University with a focus on structural electives
- Active membership with EGBC or APEGA as a registered P.Eng.
- Proof of ongoing professional development courses similar to SEABC course offerings
- Strong understanding of Part 4 of the BC Building code
- Familiarity with current steel, wood, concrete design codes
- Experience in precast concrete design and steel structures is an asset
- Proficiency in Revit and structural analysis tools
- Strong attention to detail and project constructability
- Excellent verbal and written communication skills in English
- Valid BC drivers license and access to a reliable personal vehicle

Key Responsibilities:

- Work both independently and collaboratively in a team to complete structural designs on large scale commercial projects
- Provide Bluebeam/pdf drafting mark ups to the drafting department
- Review shop drawings for structural components of building systems including roof decking, structural steel, roof and floor trusses, etc.
- Perform structural design calculations and peer reviews of design work
- Conduct construction site reviews, create field reports, and resolve on-site issues
- Develop detailed drawings and specifications using Revit and structural analysis software
- Collaborate effectively with architects, contractors, and other engineers to ensure accurate project execution
- Ensure compliance with industry standards and local building codes

Compensation:

- Salary \$115,000 - \$140,000 per year, depending on experience

Benefits:

- Competitive salary with annual fixed increases based on experience and performance
- Competitive benefits package
- Company funded professional development opportunities
- Collaborative and supportive work environment

If you are eager to contribute to innovative structural solutions and want to grow your career in a dynamic firm, please submit your resume and a cover letter in person or by email to info@kerkhoffeng.ca. Only short-listed candidates will be contacted.
