Viscera Health

The only clinical workflow platform built for Urologists.

Do the job you love. Without the administrative overhead.

No more after-hour charting

No more typing

No more templates

No more chasing denials

Viscera powers the clinical workflows around your EHR, so you can stop being a data entry clerk, and go back to being a doctor. It works in real time, creating structured notes that support billing, updating charts – before the surgeon leaves the room.

2.5 hours/day

Saved on charting and administrative work, per doctor.

10x faster

Documentation, with one-click review and sign-off.

4 hours/day

Administrative time saved with no downstream chasing.

100%

More eye contact and attention for patients.

Urology's EHR autonomy platform.

EHRs were built for record-keeping, not patient care. That's why they've cost clinics countless hours navigating administrative tasks, chasing documentation, and managing insurance requirements instead of treating patients. **Viscera fixes that.**

Easy deployment

Go live in weeks, not months.

- ✓ Seamless data synchronization
- ✓ Minimal disruption to existing physician workflows
- ✓ Dedicated implementation for multi-provider clinics

Intelligent pre-charting

Everything important, before the patient walks in.

- ✓ History, labs, imaging, medications, & prior visits
- ✓ Eliminates chart digging and information hunting
- ✓ Providers start every encounter fully prepared

One minute chart review

Documentation physicians actually approve.

- ✓ 80% of notes require zero edits
- ✓ Remaining notes are typically reviewed and finalized in under one minute
- ✓ Approved documentation updates EHR automatically

Revenue capture & coding

Get paid for the care you deliver

- ✓ Supports accurate coding and visit leveling
- ✓ Reduces missed reimbursement opportunities

Denial defense

Built to prove medical necessity

- ✓ Structured evidence captured throughout the encounter
- ✓ Auto-generates documentation for audits & denials
- ✓ Respond to payer inquiries without chasing information across systems

Physician autonomy

Less administration. More patient care.

- ✓ Eliminates hours of post-visit documentation
- ✓ Reduces administrative burden across the clinic

Product Specifications

Specifications

Platform Type	Cloud-based AI platform
Primary Use	Clinical workflows around documentation & billing
Operating Environment	Exam and operating rooms
Supported Specialty	Purpose-built for Urology
Device Compatibility	iPad (supported iPadOS versions)

Security

Compliance Standards	HIPAA Compliant
Data Security	Encrypted data storage
Access Controls	Role-based access

Features

Real-time	Point-of-care capture
Billing & audit ready	Proof of medical necessity at the click of a button
Urologic Intelligence	For contextual structuring
Flexible Output	Notes, RCM Output, and EHR updates
Turnkey	Day 1 deployment with no templates or prompts
Ambient	Hands-free clinical workflow

Structured Outputs

RCM-ready visit note, procedure-aware operative note, and patient-friendly summary.

Revenue Guardrails

Hard safeguards ensure accurate classification of labs, imaging, and in-office services.

Urology Brain & Coding Index

Findings are mapped to urology-specific ICD-10/CPT with validated MDM complexity.

Prompt & Schema Enforcement

Strict schemas ensure complete, consistent, and compliant structured documentation.

Agentic AI Core

Independent agents capture subjective context, objective evidence, and clinical decision-making to build Assessment & Plan.

Clinical Signal Capture

Passive ambient audio capture from visits and procedures. No prompts, workflows, or clinician effort.
