

# Accelerate Your Enterprise with AI-Ready Data Access

Enterprises need to move faster with AI, but fragmented access and inconsistent data controls slow progress and add risk. TrustLogix gives teams unified, secure access to the data that drives AI—so innovation moves quickly, safely.

## The Data Security Platform for Faster, Safer Access Across Sharing, Analytics and AI

TrustLogix delivers a patented, AI-powered data security platform that unifies data visibility, policy enforcement, and AI protection across every data system. It continuously detects inappropriate access, right-sizes entitlements, and enforces least-privilege controls across Snowflake, Databricks, Power BI, and AI agents—keeping policies aligned as users, data, and platforms evolve.

# AI-Powered Data Security that Adapts as Your Business Moves

## Data Security Posture Management with Business Context

Continuously discover risks, recommend least-privilege policies, and simplify compliance based on the business context of your data.

## Dynamic Access Controls with Metadata-Aware Policies

Enforce granular, business-aware access controls across platforms and dynamically adjust entitlements as roles and classifications change.

## AI Data Security with Business Classification Awareness

Enforce business-aware access for AI agents, automatically apply data sensitivity policies in training and inference, and monitor activity to prevent misuse or leakage.

The TrustLogix Data Security Platform yielded immediate visibility and prescriptive recommendations. That helped us automate and operationalize our access controls, audit, and compliance processes and respond to data access requests and issues. So customers always have access to the right data at the right time. ”
