

SEMICONDUCTOR & MANUFACTURING

What semiconductor and manufacturing leaders say about TrustLogix

Design IP, yield, and customer data now feed analytics and AI agents. Industry leaders explain how they keep that access least-privilege, auditable, and compliant.

“Finally getting a handle on practical permissions management, oversight and delegation!”

“Their features and roadmap were a good match for what our organization needed, and we have a continuous guidance, feedback and support loop.”

Data & Analytics Manager Semiconductor Manufacturing

“A flexible, easy-to-use tool for user and access management.”

IT Associate
Semiconductor Manufacturing

“Complete auditability and contractual compliance for access to our data products and customer data.”

Data & Analytics
Telecommunications Manufacturing

“TrustLogix is easy to set up and deploy in a production environment.”

Global VP, Data & Analytics
Manufacturing

TRUSTLOGIX BENEFITS

Access oversight & delegation

Purpose- and org-based entitlements with policy-based access control, enforced natively at the source.

Auditability & compliance

Continuous posture visibility and evidence for contractual and regulatory data-sharing obligations.

AI agent security

The same least-privilege policies govern what copilots, RAG pipelines, and MCP-connected agents can reach.
