

PRESS RELEASE

Chartered Group Co-Founders Chartered Vectorial to Advance AI-Native Enterprise Intelligence

SINGAPORE, April 2026 — Chartered Group today announced the co-founding of Chartered Vectorial, an AI-native applied intelligence company created to address one of the most pressing challenges facing enterprises today: translating artificial intelligence from strategy into real-world execution.

Artificial intelligence has rapidly shifted from experimentation to a business imperative. Yet across industries, many organisations continue to struggle with operationalising AI at scale, particularly in areas such as integration, governance, and deployment within existing workflows.

Chartered Vectorial has been established to bridge this gap. Headquartered in Singapore and operating across Japan, ASEAN, and Europe, the company designs and deploys production-grade AI systems that integrate directly into enterprise operations. Its solutions enable organisations to automate decision-making, enhance operational efficiency, and unlock actionable intelligence from their internal data.

Chartered Vectorial: Advancing AI from Strategy to Deployment

While investment in artificial intelligence continues to accelerate globally, the transition from pilot initiatives to enterprise-wide implementation remains a significant challenge. Many organisations continue to face barriers in translating AI ambition into scalable, production-grade systems.

Chartered Vectorial addresses this gap through its VectorEdge Suite, a portfolio of AI-native enterprise intelligence solutions, and its proprietary VectorForge methodology, which enables organisations to move from concept to deployment in weeks rather than months.

By combining consulting-grade strategic insight with AI-native engineering and governance-led deployment, the company focuses on delivering practical, scalable intelligence systems embedded directly within enterprise workflows.

For Chartered Group, the co-founding of Chartered Vectorial reflects its conviction that artificial intelligence will become a foundational capability across modern enterprises. Over the past 35 years, the Group has built and supported businesses across Europe and Asia, with a focus on long-term value creation, institutional trust, and forward-looking innovation. This experience provides a strong foundation for delivering AI solutions that are both operationally relevant and scalable.

Chartered Vectorial is founded and led by Pradeep Menon, who brings over two decades of experience at the intersection of enterprise technology and artificial intelligence. He combines C-suite strategy with engineering rigor to deliver agentic AI systems that transform businesses. Over his career, he has held senior roles at Microsoft, Alibaba Cloud, and IBM, and has led teams delivering live enterprise solutions across Europe and Asia. He is also a published author and frequent keynote speaker on AI transformation and modern data architecture.

Chartered Group

Leadership Perspectives

Eyal Agmoni, Founder and Chairman of Chartered Group, commented:

“Artificial intelligence is no longer an emerging trend, it is becoming the operating layer of modern enterprises. The question is no longer whether organisations adopt AI, but how effectively they integrate it into their core systems. At Chartered Group, we see this as a defining shift. The co-founding of Chartered Vectorial reflects our commitment to enabling enterprises to move beyond experimentation and embed intelligence directly into how they operate, make decisions, and scale.”

Pradeep Menon, Founder and CEO of Chartered Vectorial, said:

“AI is not a tool you use. It is the means through which the firm operates in every fabric of the company: strategy, building, operations, governance. It is not an application running on your company. It is the operating system of your company. When we built Chartered Vectorial, we did not ask where can we use AI. We asked: what does a firm look like when intelligence is the operating layer beneath everything? The answer changed everything.”

About Chartered Group

Chartered Group is a global private equity firm dedicated to delivering bespoke investment opportunities for accredited and institutional investors. The Group offers a comprehensive suite of financial solutions, underpinned by deep market expertise and an extensive international network, enabling access to high-quality opportunities across real estate, financial services, and transformative technologies.

Through its integrated platform spanning asset management, investment banking, and strategic advisory, Chartered Group curates disciplined, tailored investment strategies focused on long-term value creation.
