

MARINA INTERNATIONAL SCHOOL

PHYSICS SCHEME OF WORK

FORM 7 - TERM 1

WEEK	TOPIC	TOPIC DETAILS
1.1	PHYSICAL QUANTITIES AND UNITS	<p>SI units</p> <ul style="list-style-type: none"><input type="checkbox"/> recall the SI base quantity of amount of substance (mol) and its unit mole(mol) <p>The Avogadro constant</p> <ul style="list-style-type: none"><input type="checkbox"/> understand that the Avogadro constant N_A is the number of atoms in 0.012 kg of carbon-12 <ul style="list-style-type: none"><input type="checkbox"/> use molar quantities where one mole of any substance is the amount containing a number of particles equal to the Avogadro constant N_A
2.1	Practical	<p>Practical</p> <ul style="list-style-type: none"><input type="checkbox"/> Planning<input type="checkbox"/> Evaluation

WEEK	TOPIC	TOPIC DETAILS
3.1	ELECTRIC FIELDS	<p>Electric fields and field lines</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand that an electric field is an example of a field of force and define electric field as force per unit positive charge <input type="checkbox"/> recall and use $F = qE$ for the force on a charge in an electric field <input type="checkbox"/> represent an electric field by means of field lines <p>Uniform electric fields</p> <ul style="list-style-type: none"> <input type="checkbox"/> recall and use $E = \Delta V / \Delta d$ to calculate the field strength of the uniform field between charged parallel plates <input type="checkbox"/> describe the effect of a uniform electric field on the motion of charged particles <p>Electric force between point charges</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand that, for a point outside a spherical conductor, the charge on the sphere may be considered to be a point charge at its centre <input type="checkbox"/> recall and use Coulomb's law $F = Q_1Q_2 / (4\pi\epsilon_0r^2)$ for the force between two point charges in free space <p>Electric field of a point charge</p> <ul style="list-style-type: none"> <input type="checkbox"/> recall and use $E = Q / (4\pi\epsilon_0r^2)$ for the electric field strength due to a point charge in free space <p>Electric potential</p> <ul style="list-style-type: none"> <input type="checkbox"/> define electric potential at a point as the work done per unit positive charge in bringing a small test charge from infinity to the point <input type="checkbox"/> recall and use the fact that the electric field at a point is equal to the negative of potential gradient at that point <input type="checkbox"/> use $V = Q / (4\pi\epsilon_0r)$ for the electric potential in the field due to a point charge <input type="checkbox"/> understand how the concept of electric potential leads to the electric potential energy of two point charges and use $EP = Qq / (4\pi\epsilon_0r)$

WEEK	TOPIC	TOPIC DETAILS
4.1	MOTION IN A CIRCLE	<p>Kinematics of uniform circular motion</p> <ul style="list-style-type: none"> <input type="checkbox"/> define the radian and express angular displacement in radians <input type="checkbox"/> understand and use the concept of angular speed <input type="checkbox"/> recall and use $\omega = 2\pi / T$ and $v = r\omega$ <p>Centripetal acceleration</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand that a force of constant magnitude that is always perpendicular to the direction of motion causes centripetal acceleration <input type="checkbox"/> understand that centripetal acceleration causes circular motion with a constant angular speed <input type="checkbox"/> recall and use $a = r\omega^2$ and $a = v^2 / r$ <input type="checkbox"/> recall and use $F = mr\omega^2$ and $F = mv^2 / r$
5.1	**CAPACITANCE	<p>Capacitors and capacitance</p> <ul style="list-style-type: none"> <input type="checkbox"/> define capacitance, as applied to both isolated spherical conductors and to parallel plate capacitors <input type="checkbox"/> recall and use $C = Q / V$ <input type="checkbox"/> derive, using $C = Q / V$, formulae for the combined capacitance of capacitors in series and in parallel <input type="checkbox"/> use the capacitance formulae for capacitors in series and in parallel <p>Energy stored in a capacitor</p> <ul style="list-style-type: none"> <input type="checkbox"/> determine the electric potential energy stored in a capacitor from the area under the potential-charge graph <input type="checkbox"/> recall and use $W = 1/2QV = 1/2CV^2$ <p>Discharging a capacitor</p> <ul style="list-style-type: none"> <input type="checkbox"/> analyse graphs of the variation with time of potential difference, charge and current for a capacitor discharging through a resistor

WEEK	TOPIC	TOPIC DETAILS
6.1	GRAVITATIONAL FIELDS	<p>Gravitational field</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand that a gravitational field is an example of a field of force and define gravitational field as force per unit mass <input type="checkbox"/> represent a gravitational field by means of field lines <p>Gravitational force between point masses</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand that, for a point outside a uniform sphere, the mass of the sphere may be considered to be a point mass at its centre <input type="checkbox"/> recall and use Newton's law of gravitation $F = Gm_1m_2 / r^2$ for the force between two point masses <input type="checkbox"/> analyse circular orbits in gravitational fields by relating the gravitational force to the centripetal acceleration it causes <input type="checkbox"/> understand that a satellite in a geostationary orbit remains at the same point above the Earth's surface, with an orbital period of 24 hours, orbiting from west to east, directly above the Equator <p>Gravitational field of a point mass</p> <ul style="list-style-type: none"> <input type="checkbox"/> derive, from Newton's law of gravitation and the definition of gravitational field, the equation $g = GM / r^2$ for the gravitational field strength due to a point mass <input type="checkbox"/> recall and use $g = GM / r^2$ <input type="checkbox"/> understand why g is approximately constant for small changes in height near the Earth's surface <p>Gravitational potential</p> <ul style="list-style-type: none"> <input type="checkbox"/> define gravitational potential at a point as the work done per unit mass in bringing a small test mass from infinity to the point <input type="checkbox"/> use $\phi = -GM / r$ for the gravitational potential in the field due to a point mass <input type="checkbox"/> understand how the concept of gravitational potential leads to the gravitational potential energy of two point masses and use $E_P = -GMm / r$

WEEK	TOPIC	TOPIC DETAILS
7.1	MAGNETIC FIELDS	<p>Concept of a magnetic field</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand that a magnetic field is an example of a field of force produced either by moving charges or by permanent magnets <input type="checkbox"/> represent a magnetic field by field lines <p>Force on a current-carrying conductor</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand that a force might act on a current-carrying conductor placed in a magnetic field <input type="checkbox"/> recall and use the equation $F = BIL \sin \theta$, with directions as interpreted by Fleming's left-hand rule <input type="checkbox"/> define magnetic flux density as the force acting per unit current per unit length on a wire placed at right angles to the magnetic field <input type="checkbox"/> define magnetic flux density and the tesla <input type="checkbox"/> understand how the force on a current-carrying conductor can be used to measure the flux density of a magnetic field using a current balance <p>Force on a moving charge</p> <ul style="list-style-type: none"> <input type="checkbox"/> determine the direction of the force on a charge moving in a magnetic field <input type="checkbox"/> recall and use $F = BQv \sin \theta$ <input type="checkbox"/> understand the origin of the Hall voltage and derive and use the expression $V_H = BI / (ntq)$, where t = thickness <input type="checkbox"/> understand the use of a Hall probe to measure magnetic flux density <input type="checkbox"/> describe the motion of a charged particle moving in a uniform magnetic field perpendicular to the direction of motion of the particle <input type="checkbox"/> explain how electric and magnetic fields can be used in velocity selection <input type="checkbox"/> explain the main principles of one method for the determination of v and e/me for electrons

WEEK	TOPIC	TOPIC DETAILS
7.2	Magnetic fields due to currents	<p data-bbox="520 170 922 203">Magnetic fields due to currents</p> <ul style="list-style-type: none"> <li data-bbox="520 210 1473 282">□ sketch magnetic field/flux patterns due to the currents in a long straight wire, a flat circular coil and a long solenoid <li data-bbox="520 327 1434 398">□ understand that the magnetic field due to the current in a solenoid is increased by a ferrous core <li data-bbox="520 483 1426 555">□ explain the origin of the forces between current-carrying conductors and determine the direction of the forces <li data-bbox="520 600 1377 672">□ describe and compare the forces on mass, charge and current in gravitational, electric and magnetic fields, as appropriate <li data-bbox="520 757 999 790">Nuclear magnetic resonance imaging <ul style="list-style-type: none"> <li data-bbox="520 797 1362 904">□ explain the main principles behind the use of nuclear magnetic resonance imaging (NMRI) to obtain diagnostic information about internal structures <li data-bbox="520 949 1422 1057">□ understand the function of the non-uniform magnetic field, superimposed on the large constant magnetic field, in diagnosis using NMRI

WEEK	TOPIC	TOPIC DETAILS
8.1	IDEAL GASES	<p>Equation of state</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand that a gas obeying $pV \propto T$, where T is the thermodynamic temperature, is known as an ideal gas <input type="checkbox"/> recall and use the equation of state for an ideal gas expressed as $pV = nRT$, where n = amount of substance (number of moles) and as $pV = NkT$, where N = number of molecules <input type="checkbox"/> recall that the Boltzmann constant k is given by $k = R / N_A$ <p>Kinetic theory of gases</p> <ul style="list-style-type: none"> <input type="checkbox"/> infer from a Brownian motion experiment the evidence for the movement of molecules <input type="checkbox"/> state the basic assumptions of the kinetic theory of gases <input type="checkbox"/> explain how molecular movement causes the pressure exerted by a gas and derive and use the relationship $pV = \frac{1}{3}Nm$, where m is the mean-square speed (a simple model considering one dimensional collisions and then extending to three dimensions using $\frac{1}{3}$ is sufficient) <input type="checkbox"/> understand that the root-mean-square speed $c_{r.m.s.}$ is given by square root of <input type="checkbox"/> compare $pV = \frac{1}{3}Nm$ with $pV = NkT$ to deduce that the average translational kinetic energy of a molecule is $\frac{3}{2} kT$ <p>Kinetic energy of a molecule</p> <ul style="list-style-type: none"> <input type="checkbox"/> recall that the Boltzmann constant k is given by the expression $k = R/N_A$ <input type="checkbox"/> compare $pV = \frac{1}{3} Nm$ with $pV = NkT$ and hence deduce that the average translational kinetic energy of a molecule is proportional to T
9.1	ELECTROMAGNETIC INDUCTION	<p>Laws of electromagnetic induction</p> <ul style="list-style-type: none"> <input type="checkbox"/> define magnetic flux and the weber <input type="checkbox"/> recall and use $\Phi = BA$ <input type="checkbox"/> define magnetic flux linkage <input type="checkbox"/> infer from appropriate experiments on electromagnetic induction: <ul style="list-style-type: none"> • that a changing magnetic flux can induce an e.m.f. in a circuit • that the direction of the induced e.m.f. opposes the change producing it • the factors affecting the magnitude of the induced e.m.f. <input type="checkbox"/> recall and solve problems using Faraday's law of electromagnetic induction and Lenz's law <input type="checkbox"/> explain simple applications of electromagnetic induction

WEEK	TOPIC	TOPIC DETAILS
9.2	ALTERNATING CURRENTS	<p>Characteristics of alternating currents</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand and use the terms period, frequency, peak value and root-mean-square value as applied to an alternating current or voltage <input type="checkbox"/> deduce that the mean power in a resistive load is half the maximum power for a sinusoidal alternating current <input type="checkbox"/> represent a sinusoidally alternating current or voltage by an equation of the form $x = x_0 \sin \omega t$ <input type="checkbox"/> distinguish between r.m.s. and peak values and recall and solve problems using the relationship $I_{\text{r.m.s.}} = I_0 / \sqrt{2}$ for the sinusoidal case
10.1	TEMPERATURE	<p>Thermal equilibrium</p> <ul style="list-style-type: none"> <input type="checkbox"/> appreciate that (thermal) energy is transferred from a region of higher temperature to a region of lower temperature <input type="checkbox"/> understand that regions of equal temperature are in thermal equilibrium <p>Temperature scales</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand that a physical property that varies with temperature may be used for the measurement of temperature and state examples of such properties <input type="checkbox"/> understand that there is an absolute scale of temperature that does not depend on the property of any particular substance (i.e. the thermodynamic scale and the concept of absolute zero) <input type="checkbox"/> convert temperatures measured in kelvin to degrees Celsius and recall that $T / \text{K} = T / ^\circ\text{C} + 273.15$ <p>Practical thermometers</p> <ul style="list-style-type: none"> <input type="checkbox"/> compare the relative advantages and disadvantages of thermistor and thermocouple thermometers as previously calibrated instruments

WEEK	TOPIC	TOPIC DETAILS
11.1	ALTERNATING CURRENTS	<p>The transformer</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand the principle of operation of a simple laminated iron cored transformer and recall and solve problems using $NS/NP = VS/VP = IP/IS$ for an ideal transformer <input type="checkbox"/> understand the sources of energy loss in a practical transformer <p>Transmission of electrical energy</p> <ul style="list-style-type: none"> <input type="checkbox"/> appreciate the practical and economic advantages of alternating current and of high voltages for the transmission of electrical energy <p>Rectification</p> <ul style="list-style-type: none"> <input type="checkbox"/> distinguish graphically between half-wave and full-wave rectification <input type="checkbox"/> explain the use of a single diode for the half-wave rectification of an alternating current <input type="checkbox"/> explain the use of four diodes (bridge rectifier) for the full-wave rectification of an alternating current <input type="checkbox"/> analyse the effect of a single capacitor in smoothing, including the effect of the value of capacitance in relation to the load resistance
12.1	THERMAL PROPERTIES OF MATERIALS	<p>Specific heat capacity and specific latent heat</p> <ul style="list-style-type: none"> <input type="checkbox"/> explain using a simple kinetic model for matter: <ul style="list-style-type: none"> • the structure of solids, liquids and gases • why melting and boiling take place without a change in temperature • why the specific latent heat of vaporisation is higher than specific latent heat of fusion for the same substance • why a cooling effect accompanies evaporation <input type="checkbox"/> define and use the concept of specific heat capacity, and identify the main principles of its determination by electrical methods <input type="checkbox"/> define and use the concept of specific latent heat, and identify the main principles of its determination by electrical methods <p>Internal energy and the first law of thermodynamics</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand that internal energy is determined by the state of the system and that it can be expressed as the sum of a random distribution of kinetic and potential energies associated with the molecules of a system <input type="checkbox"/> relate a rise in temperature of a body to an increase in its internal energy <input type="checkbox"/> recall and use the first law of thermodynamics $\Delta U = q + w$ expressed in terms of the increase in internal energy, the heating of the system (energy transferred to the system by heating) and the work done on the system

WEEK	TOPIC	TOPIC DETAILS
13.1	PRODUCTION AND USE OF ULTRASOUND IN DIAGNOSIS	<ul style="list-style-type: none"> <li data-bbox="520 168 1404 235">□ explain the principles of the generation and detection of ultrasonic waves using piezo-electric transducers <li data-bbox="520 280 1396 347">□ explain the main principles behind the use of ultrasound to obtain diagnostic information about internal structures <li data-bbox="520 392 1356 459">□ understand the meaning of specific acoustic impedance and its importance to the intensity reflection coefficient at a boundary <li data-bbox="520 504 1388 571">□ recall and solve problems by using the equation $I = I_0 e^{-\mu x}$ for the attenuation of ultrasound in matter <li data-bbox="520 705 1324 772">□ explain the principles of the production of X-rays by electron bombardment of a metal target <li data-bbox="520 817 1460 884">□ describe the main features of a modern X-ray tube, including control of the intensity and hardness of the X-ray beam <li data-bbox="520 929 1444 1041">□ understand the use of X-rays in imaging internal body structures, including a simple analysis of the causes of sharpness and contrast in X-ray imaging <li data-bbox="520 1086 1388 1153">□ recall and solve problems by using the equation $I = I_0 e^{-\mu x}$ for the attenuation of X-rays in matter <li data-bbox="520 1198 1396 1265">□ understand the purpose of computed tomography or CT scanning <li data-bbox="520 1288 1077 1332">□ understand the principles of CT scanning <li data-bbox="520 1377 1452 1444">□ understand how the image of an 8-voxel cube can be developed using CT scanning

PHYSICS SCHEME OF WORK

FORM 7 - TERM 2

WEEK	TOPIC	TOPIC DETAILS
1.1	OSCILLATIONS	<p>Simple harmonic oscillations</p> <ul style="list-style-type: none"><input type="checkbox"/> describe simple examples of free oscillations <input type="checkbox"/> investigate the motion of an oscillator using experimental and graphical methods <input type="checkbox"/> understand and use the terms amplitude, period, frequency, angular frequency and phase difference and express the period in terms of both frequency and angular frequency <input type="checkbox"/> recognise and use the equation $a = -\omega^2x$ as the defining equation of simple harmonic motion <input type="checkbox"/> recall and use $x = x_0 \sin \omega t$ as a solution to the equation $a = -\omega^2x$ <input type="checkbox"/> recognise and use the equations $v = v_0 \cos \omega t$ and <input type="checkbox"/> describe, with graphical illustrations, the changes in displacement, velocity and acceleration during simple harmonic motion <p>Energy in simple harmonic motion</p> <ul style="list-style-type: none"><input type="checkbox"/> describe the interchange between kinetic and potential energy during simple harmonic motion

WEEK	TOPIC	TOPIC DETAILS
2.1	Damped and forced oscillations, resonance	<ul style="list-style-type: none"><li data-bbox="504 170 1476 282">□ describe practical examples of damped oscillations with particular reference to the effects of the degree of damping and the importance of critical damping<li data-bbox="504 327 1358 360">□ describe practical examples of forced oscillations and resonance<li data-bbox="504 405 1476 551">□ describe graphically how the amplitude of a forced oscillation changes with frequency near to the natural frequency of the system, and understand qualitatively the factors that determine the frequency response and sharpness of the resonance<li data-bbox="504 595 1406 663">□ appreciate that there are some circumstances in which resonance is useful and other circumstances in which resonance should be avoided

WEEK	TOPIC	TOPIC DETAILS
3.1	COMMUNICATION	<p>Communication channels</p> <ul style="list-style-type: none"> <input type="checkbox"/> appreciate that information may be carried by a number of different channels, including wire-pairs, coaxial cables, radio and microwave links, optic fibres <p>Modulation</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand the term modulation and be able to distinguish between amplitude modulation (AM) and frequency modulation (FM) <input type="checkbox"/> recall that a carrier wave, amplitude modulated by a single audio frequency, is equivalent to the carrier wave frequency together with two sideband frequencies <input type="checkbox"/> understand the term bandwidth <input type="checkbox"/> recall the frequencies and wavelengths used in different channels of communication <input type="checkbox"/> demonstrate an awareness of the relative advantages of AM and FM transmissions <p>Digital communication</p> <ul style="list-style-type: none"> <input type="checkbox"/> recall the advantages of the transmission of data in digital form, compared with the transmission of data in analogue form <input type="checkbox"/> understand that the digital transmission of speech or music involves analogue-to-digital conversion (ADC) before transmission and digital-to-analogue conversion (DAC) after reception <input type="checkbox"/> understand the effect of the sampling rate and the number of bits in each sample on the reproduction of an input signal <p>Relative merits of channels of communication</p> <ul style="list-style-type: none"> <input type="checkbox"/> discuss the relative advantages and disadvantages of channels of communication in terms of available bandwidth, noise, crosslinking, security, signal attenuation, repeaters and regeneration <input type="checkbox"/> recall the relative merits of both geostationary and polar orbiting satellites for communicating information <p>Attenuation</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand and use signal attenuation expressed in dB and dB per unit length <input type="checkbox"/> recall and use the expression number of dB = $10 \lg (P1/P2)$ for the ratio of two powers

WEEK	TOPIC	TOPIC DETAILS
4.1	QUANTUM PHYSICS	<p>Energy of a photon</p> <ul style="list-style-type: none"> <input type="checkbox"/> appreciate the particulate nature of electromagnetic radiation <input type="checkbox"/> recall and use $E = hf$ <p>Photoelectric emission of electrons</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand that the photoelectric effect provides evidence for a particulate nature of electromagnetic radiation while phenomena such as interference and diffraction provide evidence for a wave nature <input type="checkbox"/> recall the significance of threshold frequency <input type="checkbox"/> explain photoelectric phenomena in terms of photon energy and work function energy <input type="checkbox"/> explain why the maximum photoelectric energy is independent of intensity, whereas the photoelectric current is proportional to intensity <input type="checkbox"/> recall, use and explain the significance of $hf = \Phi + \frac{1}{2}mv_{\text{max}}^2$
5.1	QUANTUM PHYSICS	<p>Wave-particle duality</p> <ul style="list-style-type: none"> <input type="checkbox"/> describe and interpret qualitatively the evidence provided by electron diffraction for the wave nature of particles <input type="checkbox"/> recall and use the relation for the de Broglie wavelength $\lambda = h/p$ <p>Energy levels in atoms and line spectra</p> <ul style="list-style-type: none"> <input type="checkbox"/> show an understanding of the existence of discrete electron energy levels in isolated atoms (e.g. atomic hydrogen) and deduce how this leads to spectral lines <input type="checkbox"/> distinguish between emission and absorption line spectra <input type="checkbox"/> recall and solve problems using the relation $hf = E_1 - E_2$ <p>Band theory</p> <ul style="list-style-type: none"> <input type="checkbox"/> appreciate that, in a simple model of band theory, there are energy bands in solids <input type="checkbox"/> understand the terms valence band, conduction band and forbidden band (band gap) <input type="checkbox"/> use simple band theory to explain the temperature dependence of the resistance of metals and of intrinsic semiconductors <input type="checkbox"/> use simple band theory to explain the dependence on light intensity of the resistance of an LDR

WEEK	TOPIC	TOPIC DETAILS
6.1	SENSING DEVICES	<p>Sensing devices</p> <ul style="list-style-type: none"> <input type="checkbox"/> show an understanding of the change in resistance with light intensity of a light-dependent resistor (LDR) <input type="checkbox"/> sketch the temperature characteristic of a negative temperature coefficient thermistor <input type="checkbox"/> show an understanding of the action of a piezo-electric transducer and its application in a simple microphone <input type="checkbox"/> describe the structure of a metal-wire strain gauge <input type="checkbox"/> relate extension of a strain gauge to change in resistance of the gauge <input type="checkbox"/> understand that an electronic sensor consists of a sensing device and a circuit that provides an output that can be registered as a voltage <input type="checkbox"/> explain the use of thermistors, light-dependent resistors and strain gauges in potential dividers to provide a potential difference that is dependent on temperature, illumination and strain respectively

WEEK	TOPIC	TOPIC DETAILS
7.1	NUCLEAR PHYSICS	<p>Mass defect and nuclear binding energy</p> <ul style="list-style-type: none"> <input type="checkbox"/> show an appreciation of the association between energy and mass as represented by $E = mc^2$ and recall and use this relationship <input type="checkbox"/> understand the significance of the terms mass defect and mass excess in nuclear reactions <input type="checkbox"/> represent simple nuclear reactions by nuclear equations of the form <input type="checkbox"/> define and understand the terms mass defect and binding energy <input type="checkbox"/> sketch the variation of binding energy per nucleon with nucleon number <input type="checkbox"/> explain what is meant by nuclear fusion and nuclear fission <input type="checkbox"/> explain the relevance of binding energy per nucleon to nuclear fusion and to nuclear fission <p>Radioactive decay</p> <ul style="list-style-type: none"> <input type="checkbox"/> infer the random nature of radioactive decay from the fluctuations in count rate <input type="checkbox"/> show an appreciation of the spontaneous and random nature of nuclear decay <input type="checkbox"/> define the terms activity and decay constant and recall and solve problems using $A = \lambda N$ <input type="checkbox"/> infer and sketch the exponential nature of radioactive decay and solve problems using the relationship $x = x_0 e^{-\lambda t}$, where x could represent activity, number of undecayed nuclei or received count rate <input type="checkbox"/> define half-life <input type="checkbox"/> solve problems using the relation

WEEK	TOPIC	TOPIC DETAILS
8.1	**ELECTRONICS	<p>The ideal operational amplifier</p> <ul style="list-style-type: none"> <input type="checkbox"/> recall the main properties of the ideal operational amplifier (op-amp) <p>Operational amplifier circuits</p> <ul style="list-style-type: none"> <input type="checkbox"/> deduce, from the properties of an ideal operational amplifier, the use of an operational amplifier as a comparator <input type="checkbox"/> understand the effects of negative feedback on the gain of an operational amplifier <input type="checkbox"/> recall the circuit diagrams for both the inverting and the noninverting amplifier for single signal input <input type="checkbox"/> understand the virtual earth approximation and derive an expression for the gain of inverting amplifiers <input type="checkbox"/> recall and use expressions for the voltage gain of inverting and of non-inverting amplifiers
9.1	ELECTRONICS	<p>Output devices</p> <ul style="list-style-type: none"> <input type="checkbox"/> understand that an output device may be required to monitor the output of an op-amp circuit <input type="checkbox"/> understand the use of relays in electronic circuits <input type="checkbox"/> understand the use of light-emitting diodes (LEDs) as devices to indicate the state of the output of electronic circuits <input type="checkbox"/> understand the need for calibration where digital or analogue meters are used as output devices
