why worry about

QUALITY CARPET CLEANING?

SERVICES

we provide

Hot Water Extraction

Hot water extraction is the process of forcing super-heated, pressurized water or cleaning solution into carpets.

Powerful vacuums suck out the solution leaving a residue free carpet. Your carpet is your building's biggest filter, hot water extraction can remove dirt and assist with the disinfection process.

Upholstery Cleaning

Upholstery cleaning is often neglected and reduces the lifespan of your furnishings.

Professional cleaning can remove trapped dirt, bacteria, viruses, allergens, skin cells, oils and grime. Upholstery cleaning is essential to keeping the workplace safe and aesthetically pleasing.

SERVICES

we provide

Encapsulation

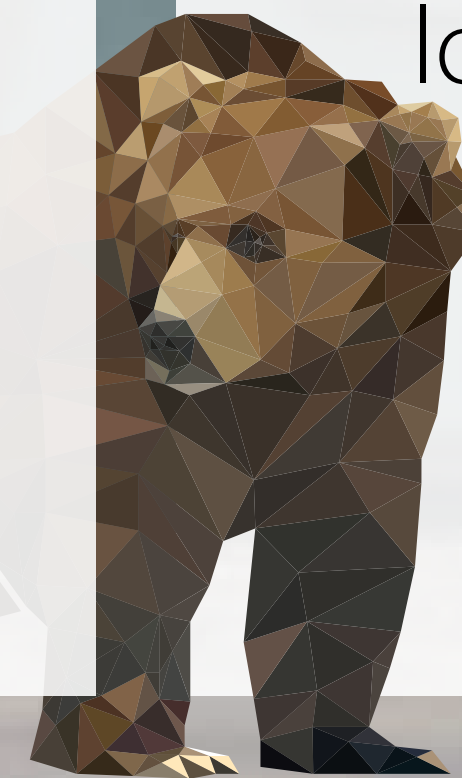

Encapsulation brings up the trapped dirt stuck deep within your carpets allowing it to be vacuumed.

A polymer based solution is agitated into the carpet. It dries into a microscopic crystals surrounding embedded soils. They are then ready to be easily removed with a beater-bar equipped dry vacuum.

Maintenance Programs

We offer complete, customized maintenance programs to ensure your carpets stay fresh.

By properly maintaining your carpets, the lifespan of the carpet can dramatically increase. This will significantly reduce your long-term costs as carpet replacement is costly.
