

Compound™ Top Film

Challenge

Reclosable packaging should preserve freshness — but often, it doesn't. Seals lose adhesion after one or two uses, letting air in and product quality drop. For the consumer, it's a daily reminder that the promise didn't hold.

Solution

Compound Top Film™ is engineered to reseal again and again. Its reclosable layer maintains tack over time and in cold storage, keeping sliced cheese or deli meats fresh and protected without compromising seal strength or usability.

Top film with options — combining secure sealing and enhanced consumer convenience

Top Film, Engineered for Performance

- | Smooth processing on automated thermoforming lines
- | Strong hot-tack and hermetic sealing
- | Compatible with a range of bottom films for full system integration
- | Safe for pasteurization and sterilization

Shelf Appeal That Supports Your Brand

- | High transparency and gloss for strong visual impact
- | Printable surface for custom designs and messaging
- | Clean peel and durable structure enhance consumer experience
- | Easy to integrate into existing flow wrapping setups

Reclosable That Actually Reseals

- | Maintains adhesion after repeated openings
- | Prevents oxygen ingress and preserves product quality
- | Performs consistently even in cold or humid conditions
