Austin's

SECRET TO A BEAUTIFUL SMILE

Dr. Lance Loveless moved to Austin to begin his dental career after graduating from the acclaimed University of Texas San Antonio Dental School in 1997. He established BridgeView Dental in 2000. Dr. Loveless is known for his breathtaking smile makeovers, precision full-mouth restorations and comprehensive services, including exceptional general dentistry.

Recently, DentaLife interviewed Dr. Loveless about his practice and his personalized approach to cosmetic dentistry.

What is your practice philosophy?

Patients trust me with their smile whether it's for an extreme smile makeover, filling a cavity or periodontal therapy. I feel a great responsibility to meet their dental health needs and their personal smile desires. To do this, it's important to take time to get to know my patients, listen to their concerns and earn their trust. My team finds this equally important. We know that patients benefit from a relationship with a dentist that they can trust throughout their lifetime. This has led our team to offer "five star" treatment and comprehensive services. Coming to our office for routine dental care is a pleasant experience. In fact, most of our patients tell us that they actually look forward to their office visits.

You are known for your natural-looking, custom-designed smiles. What is your approach to aesthetically improving patient smiles?

My goal is to conservatively address the patient's smile individually and address the health and appearance of the teeth on a tooth-by-tooth basis. For example, it might be easier to replace a cracked tooth with a porcelain crown, but if it's not necessary, I will find a way to preserve as much of the healthy tooth as possible while strengthening the tooth and improving its appearance.

With your friendly, easy-going manner, you encourage patients to share their desires and concerns about their smile. Given this, how do you handle this personal information?

A patient's expectations and dreams are critical to designing a smile that the patient will be happy with. A complimentary consultation often reveals why they have chosen to visit our office, what bothers them most about their smile and shows me how I can help.

What services are typically involved in a smile makeover?

Many new smiles are created with a combination of services—porcelain veneers, all-porcelain crowns, implant restorations, laser gumlift, teeth whitening, etc.—to deliver the best results.

Every smile is unique and can range from minor changes to those that may be extreme. Often

procedures as simple as teeth whitening and laser gum re-contouring can make a dramatic improvement. In other cases, Invisalign® orthodontics is recommended to correct a bad bite prior to aesthetic restoration. In some situations, contact lens-thin, low- or no-prep veneers called Lumineers® are a great alternative to traditional porcelain veneers.

What other types of technology do you use in your office?

I'm a "gadget" type-of-guy and I believe in offering anything that can help make my patients' experience more convenient or comfortable. We use a laser for cavity detection, soft tissue lasers for gum re-contouring, 3D Xray imaging by Gaileos, digital X-rays for an instant image and less radiation than traditional xrays, intra-oral cameras so patients can see what I see and more. One of the ultra-convenient services that we provide is same-day, single visit crowns using the CEREC® 3D system (imagine a 3D porcelain printer combined with a 3D camera).

You mentioned that helping patients feel comfortable is a top priority. Can you tell us more about this?

I have a wonderful team. Some have been with me since I opened this practice. Patients are greeted with a smile and are never rushed. We respect our patient's time and don't over-book appointments.

The office is inviting and relaxed. There's a fish aquarium in the reception area, a coffee bar, snacks, a refrigerator with cold drinks, and complimentary high-speed wireless Internet.

Comfort extends into the operatories. We provide warm blankets and offer entertainment to help pass the time. Patients can view cable TV or watch a movie. We have noise cancelling stereo headphones so patients can listen to music and are also welcome to bring their iPod or MP3 player.

How can you help people who have a fear of going to the dentist?

We offer nitrous oxide and oral sedation when appropriate. We work to gain the patient's trust so they know that their comfort is a priority and that things can proceed at their pace. For these patients we schedule dental work in segments that offer an anxious-free pace.

Do you find your work fulfilling?

When a patient sees his or her new smile for the first time, it can be quite emotional. It's not uncommon for a patient to tear up. I get many hugs and so does my team. When patients return for a check-up, they are smiling; often dress differently; many have lost weight; they start wearing contact lenses instead of glasses and just look happier. It can be an amazing transformation. I love what I do and look forward to coming to the office every day.

MEET DR. LANCE LOVELESS, FAGD

Dr. Loveless is a general dentist, who decided on his career when he was in high school and went on to realize his dream, receiving his dental degree from the prestigious University of Texas Dental School in San Antonio. He is a Fellow of the Las Vegas Institute for Advanced Dental Studies (LVI). He is also a Fellow in the Academy of General Dentistry (AGD).

Practicing general dentistry, Dr. Loveless is a member of numerous professional organizations, including the American Dental Association (ADA) and the American Academy of Cosmetic Dentistry (AACD), Texas Dental Association (TDA), Academy of General Dentistry (AGD), International Association of Comprehensive Aesthetics (IACA). He welcomes the challenges of general dentistry and in so doing, stays abreast of new materials, devices and techniques in all aspects of dentistry, taking time for continuing education and ensuring that his team does the same. Happily married, Dr. Loveless and his wife DeAnna have two young sons.

EXPERIENCE THE LVI DIFFERENCE

The Las Vegas Institute (LVI) strives to empower dentists and their team to offer cutting-edge dental care through training at LVI's beautiful hands-on post graduate dental training facility. Dentist, their teams and patients travel to Summerlin, Nevada where through live patient training they are instructed in Advanced techniques and practices in a variety of integrated dental disciplines.

Dr. Loveless has completed over 300 hours of CE at LVI. He was awarded his Fellowship in 2009. LVI Fellow is a distinction awarded to those doctors that have completed the LVI Core Curriculum which includes a minimum of 228 continuing education hours of training in advanced aesthetics, and neuromuscular science, and who has successfully completed a comprehensive examination.

Lance Loveless

A DENTIST, A PATIENT AND A BELIEVER

My story: "My wife, DeAnna had serious TMJ problems. Our search for relief for her condition seemed to point to jaw surgery as the only option. However, we finally discovered neuromuscular jaw treatment to restore her bite without surgery. DeAnna's TMJ was completely gone through neuromuscular treatments and restoring her teeth to a balanced bite. I became totally committed to making neuromuscular therapy and treatment as a part of my practice. I studied diligently for three years earned a certificate as a Fellow at LVI, the Las Vegas Institute of Dental Studies. Though LVI is not a dental school, dentists train there from all over the world and their training saved my wife from having jaw surgery and enhancing her smile all at the same time while improving the quality of her life."

"Then, something happened to me! I had migraines that came out of nowhere and I could not pinpoint the source. I would wake up in the morning knowing that by 10:00 a.m., I might have to cancel a day with my patients. The migraines were so severe that I would literally lie in a dark, cold room until they subsided.

"I went through every allergy test imaginable and even had MRI's because I was sure that there was something going on in my brain. It never occurred to me that I needed neuromuscular treatment and restorative dentistry to treat my condition. It never occurred to me that I had developed a TMJ problem.

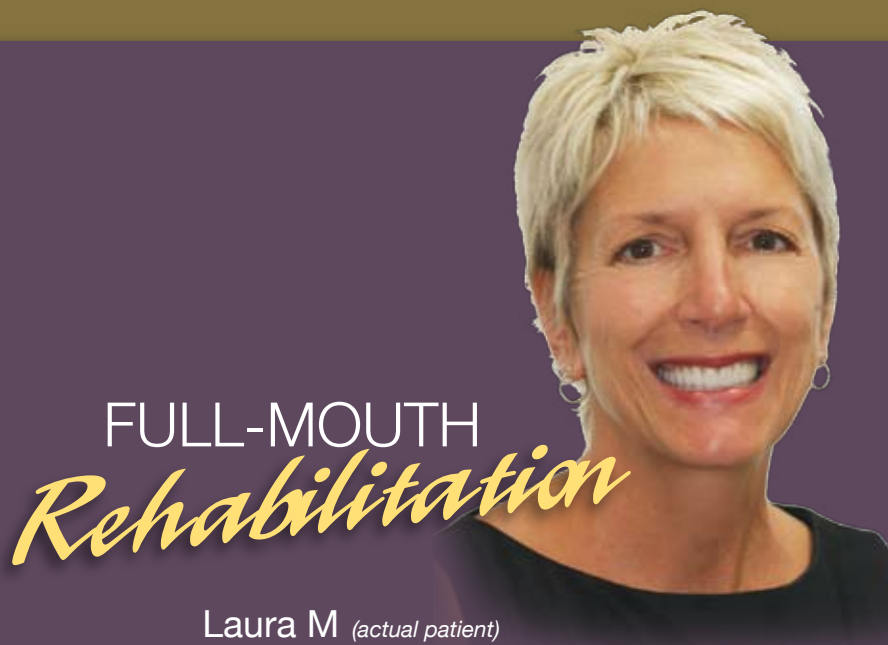

"Like as the saying goes, it is the shoemaker who fails to consider why his feet hurt or are cold. He is normally the last to make a good set of shoes for himself. That would describe me in my situation. I finally reached for my testing equipment and I was shocked to see one of the worst scans that I had seen in years. And it was mine! To my good

fortune, the training that I underwent allowed me to read the scans to know the difference between a good scan and a bad scan. I had to laugh. In many ways it was like the doctor diagnosing the doctor.

"Reality is, you cannot treat yourself so I sought the help of another neuromuscular dentist. He created an orthotic device that immediately helped relieve the pressure of my overworked jaw muscles. The orthotic device relaxed my jaw muscles and my migraines were gone.

"My unbalanced bite had taken a toll of my teeth. Many were ground down and I still had silver fillings from my childhood. That gave me the incentive to restore both my upper and lower teeth and my bite back to its proper position."

"Today my teeth are beautiful and I can see the aesthetic benefit of restoring my bite in my lower face and in the area of my chin. I learned first hand that form does follow function and my overall migraine issues are gone."

"About two years ago, I decided to improve my smile. I interviewed two dentists and decided to work with Dr. Loveless about improving my smile. My reason for this was that he and his staff made everything, including the results I desired, very simple.

I had old silver fillings that I wanted to replace and old crowns that needed to be removed. However, I decided to have my entire smile restored once I was given my options.

From the payment plans that they offered: to the staging of my smile, to making certain that the results that I desired were perfect, the process of restoring my smile was effortless. The most difficult part of the entire experience for me was sitting in the dental chair for several hours.

Dr. Loveless restored both my upper and lower teeth. Today when I drive to work, I pull down my visor to put on my lipstick and am dazzled by the beautiful smile that I see in the mirror. The best part of this, is the smile is mine.

One of my funniest experiences occurred during our family photo session. My mother looked at me and said, "Can you turn that smile down a little!" I had to laugh. For years all they could get in a family photo from me was a grin.

Taking care of my smile is as important as taking care of my body. I do not miss my dental appointments and know that my dental health is affecting my overall health. I plan to live with my new smile for a very long time."

FULL-MOUTH *Rejuvenation*

There are occasions when a patient's mouth is in very poor condition. It may be due to neglect, periodontal disease or even occlusal (bite-related) disease. Under these circumstances, treating one area, or even just one arch, will not resolve the problem. That is when full-mouth rejuvenation is recommended.

For clarification, full-mouth rejuvenation does not mean surgery. It is a non-surgical, comprehensive approach to getting the upper and lower jaws in proper alignment; removing all decay; and repairing all chipped, weakened, broken and severely worn teeth (as seen in photo below). There is no guesswork when providing the patient with such comprehensive treatment.

Dr. Loveless uses sophisticated advanced computerized technology that allows him to

precisely calculate where to position your new bite so that it is most comfortable. The neuromuscular instrumentation includes electromyography to verify the muscles are in a relaxed state in the new position and jaw tracking to establish the proper path of movement of your jaw.

In addition, Dr. Loveless uses only the most advanced all-porcelain restorations with no metal when restoring your entire mouth. The entire morning is reserved exclusively for you during the restorative treatments. Your all-porcelain restorations can be completed in two visits for your entire mouth. Ultimately, full-mouth rejuvenation creates a healthy mouth with a fantastic smile allowing you to keep your teeth for a lifetime!

Jim (actual patient)

"I broke my jaw during a Karate practice. The Navy repaired the injury but my bite was never corrected. After that, I continually ground my teeth and the enamel was worn on most.

"My wife and I began doing research and looked at cosmetic dentistry, dentures, and neuromuscular dentistry. My sister encouraged me to go to Dr. Loveless but I was resistant. Money was tight as my daughters were nearing college. My oldest daughter received a scholarship and that encouraged me to make the call. I decided to have all of my teeth

restored with dental implants, porcelain crowns and porcelain veneers.

"There is a tremendous difference in my appearance today. I used to hide my smile and now I smile freely. I feel that this has given me a commanding presence. I have even changed jobs. I have the confidence to smile and laugh with others new and feel that because of this, others feel closer to me. Restoring my teeth is a decision that I will enjoy for a lifetime."

Robert (actual patient)

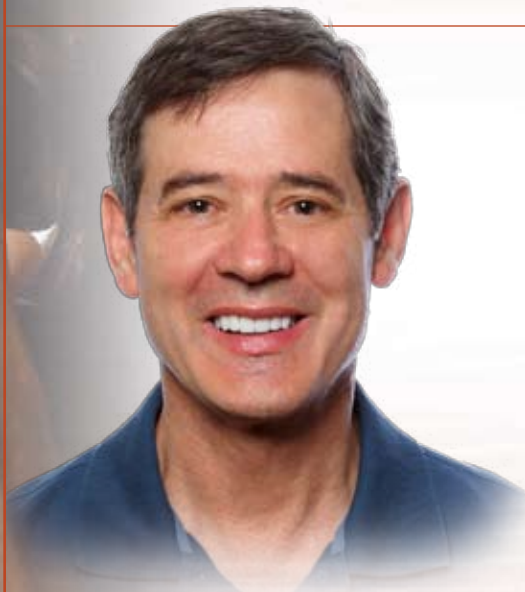

"I have always wanted a beautiful smile. As I got older, my teeth were not as white. I had had to have crowns placed on my front teeth and they distracted from my smile. And, throughout time, seven of the fillings on my back teeth were damaged and needed replacement due to night grinding from an unbalanced bite."

"I noticed the DentaLife about Dr. Loveless and his practice and decided that it would not hurt to test out his practice by going in for a cleaning. Upon meeting Dr. Loveless and his staff, I was immediately put at ease about the concerns that I had with my teeth. Dr. Loveless made several recommendations about how to improve my dental health and my smile and explained

the procedures that would ultimately give me the smile that I desired.

"Though I had worn two sets of braces, one standard set at the age of 12 and Invisalign® at the age of 40, my bite had still become unbalanced. The neuromuscular procedures repositioned my bite. Following that, all of my teeth were prepped for permanent restorations in the same day. The temporaries that I left with looked natural and were quite comfortable to wear. My permanent restorations were also placed in one appointment three weeks later. Today I love my beautiful white smile!"

Scott (actual patient)

"My teeth were stained and cracked. My bite was also off. I decided to look into my options."

"I met Dr. Loveless and loved what he had done for other people's smiles. Once I understood the technical part of restoring your teeth, I understood the dramatic results it achieved."

"I had my teeth completely restored. We transformed the personal arch first and then the bottom teeth nine months later."

"I loved the fact that Dr. Loveless had an attention to detail and I felt he did that just for me because I was so technical. I love my smile. My friends tease me and ask me when I am going to Hollywood!"

ALL-ON-4

IMPLANT-SUPPORTED
COSMETIC DENTURES

**A Full Arch of
Teeth Now Can
Be Replaced
with Just Four
Implants,
Without Bone
Grafting!**

CASE STUDY : ANA (actual All-on-4 patient as pictured above)

"When I met Dr. Loveless, my teeth were in very bad shape. Some were crooked or missing, and it was difficult for me to chew."

"Dr. Loveless showed me a dental system called the 'All-on-4' Implant. The implants permanently placed a horseshoe shaped supported denture over my teeth. I liked the idea of restoring my upper teeth with a denture that I did not have to remove or worry would slip."

"My bite was balanced with an orthotic device that I wore on my lower teeth. Once my bite was stabilized in its corrected position, my missing teeth were restored with implants that look like real teeth. The appearance of my lower teeth was improved dramatically with porcelain veneers and porcelain crowns."

"Now people comment on how young I look. They notice something different about my appearance but they cannot seem to quite put their finger on what it is! I used to smile with my mouth closed, but now I smile big—revealing my beautiful teeth!"

Judy (actual patient)

OTHER ALL-ON-4 Patients

"I wore dentures for seven years and they broke. The VA made another set for me and they were horrible. I went to 18 different dentists to find someone to expertly replace my dentures.

"I finally found Dr. Loveless and he made me a set of dentures that used the original bridge and added beautiful restorations that look so natural and beautiful. My dentures were then secured with dental implants. Believe it or not, not only do I now have beautiful dentures that look like natural teeth but I also saved money from the other eighteen estimates."

"Acidic saliva runs in my family and, unfortunately, I inherited this as well as the destruction that it creates on the enamel of your teeth. So, through the years my teeth weakened and decayed. My teeth needed to be replaced with dentures. After the acid in my saliva ruined four pairs of my dentures, I decided to look into Dental Implants.

"After speaking to my Dental Surgeon, I took his advice and I made an appointment with Dr. Loveless so that he could implant permanent restorations in my mouth. Due to the size and shape of my mouth, regaining a natural-looking smile took precision and a lot of patience. Dr. Loveless took the time to make certain that my Dental Implants would give me a smile that I would love.

"I love my new smile and wish that I had been able to have had a beautiful smile like this in my 30s! Dental Implants have given me a smile that is ageless!"

Edith (actual patient)

DENTAL IMPLANTS HAVE PROVEN TO BE AN IDEAL SOLUTION FOR THOSE MISSING ALL OF THEIR TEETH ON ONE OR BOTH ARCHES:

- Dental implants are fixed in place and do not move. Therefore, a permanent set of replacement teeth can be attached to the implants, and will function almost like natural teeth.
- Dental implant-supported teeth can give you back most of your natural biting and chewing capability. You will be able to eat the foods you like without the embarrassment of worrying about your teeth.
- Dental implants look and feel like natural teeth. You will have the complete confidence to eat, speak, sing, laugh, be active, and do all the things you do with natural teeth, knowing that you have a beautiful smile and fully functioning teeth.

Solution!**

NEUROMUSCULAR DENTISTRY

the right bite can relieve a host of painful symptoms

DO YOU SUFFER FROM:

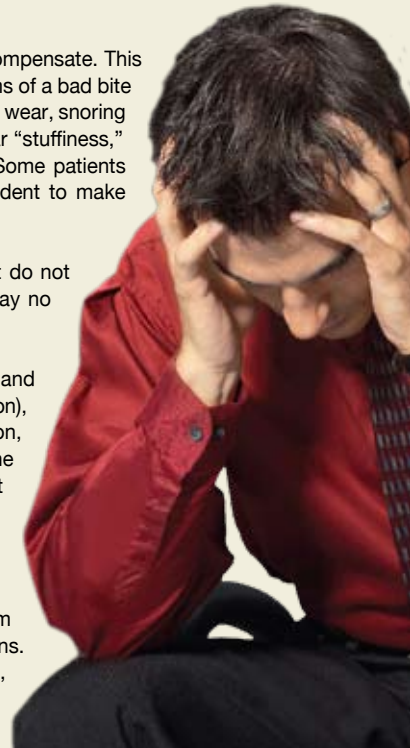

- Headaches or migraines
- Pain or pressure in and about the eyes
- Sinus problems
- Tinnitus (ringing in the ear)
- Clogging or stuffiness of the ears
- Subjective hearing loss
- Pain in or around the jaw
- Stiffness or soreness in the neck, shoulders and back
- Radiating pain down your arm to your fingers
- Snoring
- Vertigo (dizziness)
- Habits of grinding
- Clenching your teeth

When the teeth and jaw are out of alignment, muscles in the neck and shoulders try to compensate. This can cause pain and headaches that can't be relieved until the jaws are realigned. Symptoms of a bad bite and jaw misalignment include frequent head, neck, back or shoulder aches, abnormal tooth wear, snoring and pain in and around the jaw and TMJ area. You may also suffer from earaches and ear "stuffiness," ringing in your ears; and you may hear clicking and popping sounds when you chew. Some patients experience dizziness, difficulty swallowing and even chronic fatigue. However, it is prudent to make certain these symptoms are not medically related, which require the care of a physician.

It is estimated that 40-50 million Americans suffer from these symptoms, although most do not relate them to jaw misalignment. Thanks to the field of neuromuscular dentistry, you may no longer have to endure unnecessary pain and suffering due to a "bad bite" (malocclusion).

Neuromuscular dentistry addresses the muscles that control the jaw position, swallowing and chewing. Founded on the belief that a healthy smile begins with a healthy bite (occlusion), neuromuscular dentistry strives to reposition the jaw to its optimal physiological position, thus relieving the symptoms. Proper diagnosis is critical to make sure you receive the best treatment for your particular condition. Dr. Loveless may recommend treatment after conducting a thorough health history, a clinical exam and other diagnostic tests. Only minor corrective treatment may be needed, but orthodontics (braces) or full-mouth reconstruction may be required.

When optimal correction is achieved, patients can experience benefits ranging from decreased pain and discomfort to better overall health and longer-lasting dental restorations. Many patients enjoy another fringe benefit of neuromuscular dentistry—a more well-rested, revitalized person can have the facial appearance of being 10 years younger!

Aaron (actual patient)

"I experienced so much pain in my left jaw and was embarrassed that it clicked. I knew Dr. Loveless personally, and shared my TMJ condition with him. He convinced me to begin with a tens unit treatment and that helped him determine where my bite was supposed to be naturally. It took 2 or 3 visits to do this. Dr. Loveless took impressions of my teeth and shared my options to correct my bite. At first, I chose to wear an orthotic that helped move my jaw into position. But, I kept grinding my teeth at night even using the device."

"I had two other options available for correction, orthodontics or restoring my teeth. I chose the later. He first restored my back upper teeth but I thought my front teeth looked too small after that. So, he restored my upper front teeth and I have a big beautiful smile today. All of my TMJ conditions are completely gone. My jaw no longer clicks and I have no jaw pain. I was also treated for sleep apnea with a snoring device. Today he and his wife sleep soundly at night."

Lynn (actual patient)

"I was having horrible trouble with my bite. Crowns broke constantly. I had continuous joint discomfort and constant headaches."

"A friend of mine recommended that I find a dentist who performed neuromuscular dentistry. I found Dr. Loveless. We began the treatment for these conditions with TENSing treatments and after my first treatment the jaw pain began to subside. My back teeth had been restored with crowns and my bite was completely unbalanced."

"Because of this, I decided to have all of my teeth restored. Dr. Loveless worked with me to change the size and shape of my teeth. This was all completed in several dental appointments."

"I love my smile today. My tiny broken down teeth are now incredibly shaped and beautiful. My jaws no longer hurt. And, prior to restoring my teeth, my uncorrected bite kept me from scuba diving because I could not clear my ears. Today, I can scuba dive whenever and wherever I want!"

ADVANCED TECHNOLOGY

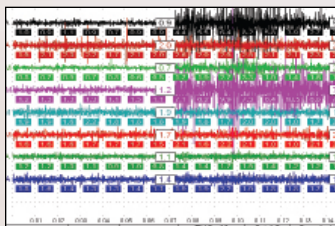

it's changing the face of dentistry

3D X-RAY BY GALILEOS

Does your dentist use 3D x-rays or are they still using traditional 2D x-rays? Dr. Loveless invests in state-of-the-art 3D technology and uses it effectively in his office. 3D imaging insures the highest accuracy for correct diagnosis. This amazing image quality technology reveals the finest details in

three dimensions. Galileos 3D X-Ray technology represents the future of dentistry.

MYOTRONICS K7

The Science and Technology of TMJ treatment

Have you ever wondered why you have headaches so frequently? Do you catch yourself reaching for Advil each day as if you were taking vitamins? Are you waking up with sore jaw muscles? Do you see your teeth

getting shorter over the years? Before your nose touches your chin, don't you think it might be time to investigate the cause of your problem rather than treating its symptoms? There is a scientific way that you can. It begins with the Myotronics K7.

The Myotronics K7 is an advanced piece of computerized diagnostic equipment used for diagnosing conditions attributed to a bad bite (malocclusion). "Bite disease" and temporomandibular joint (TMJ/TMD) disorders can be effectively detected, measured and treated using computerized electronics. Yes, dentistry has come a long way!

CEREC® TECHNOLOGY

A Time-Saving One-Visit Breakthrough in Dental Technology

If you have ever had a large cavity, a large filling that needed to be replaced

Cerec's 3-D precision technology offers the ability to create a customized restoration that fits your teeth precisely.

with a crown or a broken tooth, odds are you underwent two to three dental visits to fully restore your tooth. In the past, this required one visit to prepare your tooth and take an impression. Then you left with a temporary restoration. A second visit was necessary to deliver a permanent crown. A third visit might also have been required to adjust the crown. Today, Cerec offers the convenience and value of a one-visit restoration.

The Cerec technology creates beautiful inlays and onlays, veneers

and crowns and eliminates the necessity of ongoing dental appointments. Cerec's 3-D precision technology offers the ability to create a customized restoration that fits your teeth precisely. This restoration is created in the dental office while you wait. During the same visit, it is placed and adjusted. Your dental visit is concluded when you leave with a beautiful porcelain restoration that is bio-compatible to your very own tooth structure. This is unquestionably the most cost-efficient and time-saving restoration offered in dentistry today.

SOFT TISSUE LASER

A state-of-the-art soft tissue laser is used to gently reshape and recontour the gums to enhance your smile. It is also used to treat fever blisters and periodontal disease.

DIAGNODENT LASER CAVITY DETECTOR

More and more patients place value on healthy and attractive teeth. In order to maintain optimum dental health, the earliest possible detection of tooth decay and care are essential. Dr. Loveless uses the DIAGNOdent laser to assist in the early detection of cavities. When very small cavities are detected in the earliest stage, patients gain the advantage of protecting and preserving the tooth structure.

I N V I S A L I G N ®

Invisalign® takes a modern approach to straightening teeth, using a custom-made series of aligners created for you and only you. These aligner trays are made of smooth, comfortable and virtually invisible plastic that you wear over your teeth. Wearing the aligners will gradually and gently shift your teeth into place, based on the exact movements your dentist or orthodontist plans out for you. There are no metal brackets to attach and no wires to tighten. You just pop in a new set of aligners approximately every two weeks, until your treatment is complete. You'll achieve a great smile with little interference in your daily life. The best part about the whole process is that most people won't even know you're straightening your teeth.

Actual results from Invisalign by Dr. Loveless

PORCELAIN VENEERS

Producing a perfect smile is an art, as unique and individual as a person's features. The components that produce a beautiful smile require great attention to detail on a tooth-by-tooth basis. With proper design measurements, the exact proportions of a new smile can be achieved. Meticulous records, measurements and photographs are used to evaluate your smile needs and determine what it will take to produce the perfect smile for you. A wax model is made from an impression of your teeth before you begin, allowing you to see the result that can be achieved with porcelain restorations. Designing a beautiful, natural-looking smile takes preparation and planning. Dr. Loveless, while practicing general dentistry, has undergone extensive advanced training in cosmetic dentistry at the Las Vegas Institute for Advanced Dental Studies (LVI).

WHAT ARE PORCELAIN VENEERS?

Porcelain veneers are very thin porcelain facings. They are used to change

the shape, color, size and spacing of your teeth. They have a life-like appearance with the strength, beauty and durability that only porcelain restorations offer. In addition, they will not discolor or wear like natural tooth enamel.

DO PORCELAIN VENEERS ALL LOOK THE SAME?

No. Porcelain is very life-like when done correctly. The difference in the porcelain is the skill of the ceramist. Also, your smile is custom designed specifically for you. There are various shapes in veneers. You can choose a smile design that is sporty, natural or has that Hollywood look. Creating the perfect smile requires a blending of precision dentistry, perfect planning and an artist's eye for detail. Porcelain veneers are the perfect answer for those who want a dazzlingly white, beautiful smile.

Ken (actual patient)

"My teeth were affected from multiple years of neglect and accidents. I own an Accounting Firm, and one of my accountants has great teeth! She told me that improving my smile would be a financial commitment that would benefit my life greatly in many ways. And she was right!"

"Dr Loveless restored nine of my teeth, six of my upper teeth and three of my lower. Dr. Loveless matched the color of the restorations perfectly to the color of my other teeth. I have noticed that since I restored my smile, people now look at me differently. My wife loves my new smile! My smile has changed my life so much. People say that I seem happier, but the truth is, I had to learn how to smile again. Now that I have that down, I smile all the time!"

Kathy (actual patient)

"My teeth were uneven and my gums were prominent. The overall size and shape of my teeth had no unity and were jagged on the edges. Dr. Loveless was my dentist and I complained to him for a number of years before I decided to make a change. Dr. Loveless explained my choices and each step each process would require. I chose to improve the appearance of my teeth with eight porcelain veneers. My smile literally changed in only three office visits!"

"I am so happy with my smile. My gums were re-contoured and this makes my teeth look even more beautiful. I now have the confidence to smile! My family and friends continue to compliment my smile. I can honestly say, I am not a good dental patient, but Dr. Loveless made me comfortable through each phase of restoration."

Jennifer (actual patient)

"I did not like the size or the color of my teeth. I tried ZOOM! Whitening® but that did not get the results that I wanted. My boss and several of my family member had Lumineers™ and loved their smile."

"So I started my research and found Dr. Loveless. He improved my smile dramatically with all porcelain veneers. Now my smile is white and beautiful. I was shocked that in less than one month I had an incredibly engaging smile that has helped me connect with others. I get so many compliments on my smile!"

Eddie (actual patient)

"i had visited so many dentists and had such bad experiences with each that i had anxiety just thinking about going to the dentist. Because of that, my teeth were affected by a decline in my dental health."

"i had also been quite unhappy with my smile. my teeth had noticeable gaps. one day, i decided to change my smile and visited with dr. Loveless and his staff."

"During my office visit, Dr. Loveless gave me a plan of action, which I willingly agreed to. He guided me through the entire process of changing my smile."

"six porcelain Veneers improved my smile! i am self-employed and my smile is so important. my smile is one that i am now proud of! and my wife loves too!"

If you have any of these issues, porcelain veneers could be the answer to your smile dilemma:

- ☐ Spaces between your teeth
- ☐ Broken or chipped teeth
- ☐ Unsightly, stained or washed-out fillings
- ☐ Permanently stained or discolored teeth
- ☐ Misshapen or crooked teeth
- ☐ Dark, yellow or stained teeth

Actual Patients of Dr. Loveless. Actual Results May Vary.

This patient had several layers of old bonding on his front teeth that was wearing off and stained. Instead of patching his teeth up with more bonding he decided to restore his smile using 10 all porcelain veneers. No more "patch work" for him.

Our patient in this case had small crooked teeth and didn't like that she showed so much gum when she smiled. We did a laser gum lift to make her teeth longer and reduced her "gummy smile". We finished off her smile makeover with 10 veneers. We were able to accomplish all this in just two visits!

This patient had been through jaw surgery and braces to correct her smile, but wanted that "WOW" effect so we completed her transformation by doing 10 veneers and hit a home run! She can't stop smiling now.

Our patient has had stained teeth as far back as he can remember. Since childhood he has wanted to smile with beautiful white teeth. Without removing any tooth structure, we used Lumineers to give him the bright smile that he has always dreamed of.

Our patient was unhappy with her crooked yellow teeth and old fake looking crown on the front tooth. She decided to transform her smile by placing 10- all porcelain veneers and crowns. We did a laser gum lift to even out her gum line which created a beautiful frame for her masterpiece.

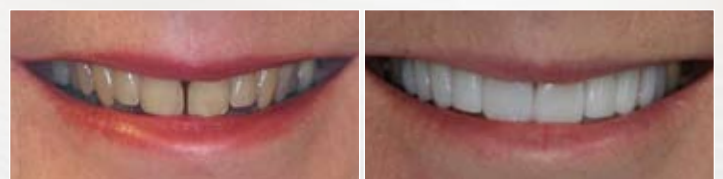

Our patient was dissatisfied with how her front teeth had worn down, creating flat, square looking teeth. We made a dramatic change in her smile by just doing 4 all porcelain veneers. Her smile line has been fully restored!

This patient had old bonding on her teeth that was not looking very good and wanted something that looked better and that would hold up better long-term. Her smile makeover consisted of porcelain crowns and veneers on all her upper 14 teeth. We were able to fix the alignment, size, shape, color and symmetry of her teeth which resulted in a beautiful smile

Our patient didn't like the lack of uniformity in the size of her teeth and didn't like how the side teeth in the back angled in so we did 10 all porcelain veneers to correct those issues. Now everything is uniform and her smile is filled out in the back.

Our patient was extremely unhappy with her teeth. She wanted to change the color, size and shape of her teeth, and she wanted to close off the space between her front two teeth. We were able to accomplish all those goals by placing 10 Lumineers with very minimal removal of her actual tooth structure. She is very pleased with her new look.

MORE SMILES CREATED BY

by Dr. Loveless

Patient had worn down his front teeth due to grinding and wanted his teeth longer again so he would be able to show more teeth when he smiled. We were able to achieve his dental goals by doing a full mouth rehabilitation using all porcelain restorations on 28 teeth. He now has healthy, rejuvenated teeth that recapture the smile of his youth.

Patient had old existing veneers that were too dark and small. She wanted a fuller, whiter smile. Her smile makeover consisted of 28 all porcelain restorations which got rid of her old dental work and replaced it with brand new restoration. She now has a healthy and beautiful smile.

Our patient was a teeth grinder at night and had worn his teeth down so small that they barely showed when he spoke to people. We rebuilt his bite by doing porcelain restorations on all his upper teeth. This allowed us to give him back his original tooth length and dramatically improve his smile and function. Now that his jaw is in a more relaxed position he has no reason to grind his teeth.

Patient didn't like her old crowns because of the different colors and spaces between them. We replaced them plus added a few veneers to establish a more uniform color and size. We were also able to close up the unwanted spaces resulting in a fantastic new smile.

This patient disliked her teeth and wanted them white and straight. She also wanted to show more teeth in the back when she smiled. We aligned and whitened her teeth by doing her upper arch, the top 14 teeth which also enabled us to fill out her "buccal corridor" (the space between her cheek and her back teeth) so she showed more teeth when she smiled.

Our patient had some old bonding on her teeth and she had ill fitting veneers on her front 4 teeth that were causing chronic bleeding of the gums around the veneers. We removed the old veneers and repaired the damage then added 6 new veneers to replace the old bonding. Now she has a beautiful and healthy smile.

This patient had years of "patch work" dentistry done on his teeth and wanted a more definitive solution and was ready for his smile to look good. We removed all his old dental work and did all porcelain restorations on his upper and lower teeth. He finally has the smile he has always wanted, but did not know how to go about getting. We spend some time in the beginning to let him know what options he had and what dentistry would be best for him before moving forward with his treatment. Now he says he is more confident in social settings and smiles a lot more.

Our patient had a lot of old failing dentistry, cavities, and crooked teeth that she desperately wanted fixed. She wanted to be able to smile in public again. We worked on getting her mouth healthy, and then restored her entire mouth with porcelain restorations. She is happy all the time now, and says her smile makeover actually changed her personality for the better. Now her teeth and gums are healthy and beautiful.

ARE YOU A CANDIDATE FOR COSMETIC DENTISTRY?

YES NO

- ☐ ☐ Are you embarrassed about smiling in front of people?
- ☐ ☐ Do you ever put your hand up to cover your smile?
- ☐ ☐ Do you dislike your smile in photographs?
- ☐ ☐ When you look through magazines, do you envy the models' smiles?
- ☐ ☐ Do you wish your teeth were whiter?
- ☐ ☐ Do you think you show too much or too little of your teeth when you smile?
- ☐ ☐ Would you like to change the way your teeth or gums are shaped?
- ☐ ☐ Do you have gaps or spaces between your teeth?
- ☐ ☐ Are you considering braces for that perfect smile?
- ☐ ☐ Do you have crooked or misaligned teeth?

If the answer is 'yes' to any of these questions, you may be a good candidate for cosmetic dentistry. Call today and schedule your personal consultation.
