WORK EXPERIENCE

E-commerce Platform for Online Stores

2023.2 – 2025.1
1.9 years
Full-time

Employer:	Leading ecommerce technology provider
Roles:	Frontend developer
Stack:	JavaScript, Jest, React, Redux, TypeScript, Webpack, Sass

An advanced e-commerce platform designed to integrate multiple online stores into a coherent and unified system, providing a streamlined experience for both vendors and customers.

- Offers a centralized dashboard for seamless management of product listings, inventory levels, and order processing across all connected stores.
- Features a standardized shopping cart and checkout process to enhance user experience and optimize conversion rates.
- Supports various payment gateways and offers customizable payment options for flexibility and convenience.
- Incorporates robust analytics tools to provide insights into sales trends, customer behavior, and store performance metrics.
- Includes comprehensive CRM features to facilitate customer interaction and improve engagement through tailored marketing campaigns and promotions.
- Ensures data security and privacy with advanced encryption protocols and compliance with industry standards.
- Offers multi-language and multi-currency support to cater to a diverse international audience.

Responsibilities

- Refactoring legacy frontend code
- Implementing frontend performance optimizations and integrated webpack
- Migrating concatenated CSS to SASS for improved styling management
- Maintaining and writing technical documentation
- Developing microfrontend ReactJS components for the checkout module

Achievements

- Migrated frontend components to React framework
- Implemented Jest testing for frontend code stability
- Optimized Redux store for improved state management
- Modernized monolithic frontend with Webpack integration
- Enhanced page load speed with optimized Sass and TypeScript in e-commerce platform redesign.

Online Community Network for Gamers
