## Foundations and superstructure for village expansion

Farrell Construction was engaged by Naylor Love to deliver the superstructure contract for the Russley Village extension, covering Blocks B and C and a large basement carpark. Works included pre-cast panels, beams and in-situ concrete pours, forming the structural backbone of the new development.

Our team worked closely with Naylor Love to sequence and complete works efficiently, averaging more than 15 staff onsite across the 15-month programme.

Our provision of a senior site manager, foreman, carpenters and labourers ensured the project ran smoothly, delivering the structural framework on time and to specification.
