

Anthony Wilding Retirement Village, Christchurch

Ryman Healthcare

Upgraded facilities for enhanced daily living

Scope

Ryman Healthcare engaged Farrell Construction to structurally strengthen and refurbish the Anthony Wilding Retirement Village lounge, café and pool areas, plus construct a 240m² activities extension. This was an extensive structural upgrade and detailed refurbishment, all delivered within a live fully operational aged care environment.

Process

The live setting required careful planning and phasing in order to minimise disruption to residents and staff. The programme was split into three portions: first constructing the new activities centre, followed by refurbishing and strengthening the lounge and café, and finally upgrading the chapel, cinema, dining and reception. Farrell's in-house carpentry team delivered all elements, from structure through to final fit-out.

Solution

Delivered on time and within budget, the project has created a revitalised and expanded village centre that enhances daily life for residents and supports Ryman's ongoing care philosophy.
