

Royans Warehouse, Hornby

Envision Eighty20

Supporting a fast-paced heavy vehicle facility build with robust carpentry solutions and dedicated on-site leadership

Scope

Royans Warehouse, Hornby is a large-scale industrial facility designed to support heavy vehicle repair and logistics operations, requiring robust construction and efficient programme delivery.

Process

Our role as carpentry subcontractor included the delivery of internal and external framing and associated finishing carpentry across warehouse and office areas. The works were delivered within a fast-paced industrial environment, requiring careful sequencing and coordination with multiple trades. We also provided a dedicated Site Manager to oversee day-to-day site operations, manage trade interfaces, and ensure alignment with programme and quality requirements. This on-site leadership was key to maintaining productivity, resolving sequencing challenges, and ensuring smooth coordination across all work fronts.

Solution

Our involvement at Royans Warehouse demonstrates our capability to deliver carpentry packages within complex industrial builds, supported by strong site management and a disciplined approach to safety, programme, and quality delivery.
