

Acres Retail Development, Christchurch

Envision Eighty20

Coordinated carpentry delivery across base build and tenant-ready retail spaces, driven by smart sequencing and programme control

Scope

The Acres Retail Development is a large-format commercial project delivering a modern retail environment with multiple tenancies and high-quality public-facing spaces. Our role as carpentry subcontractor includes the delivery of internal and external framing, linings, external cladding and finishing carpentry across the development. The project involves a mix of base build and tenant-ready spaces, requiring flexibility in sequencing and a strong focus on programme to accommodate staged handovers.

Process

In addition to our trade delivery, we are providing a Senior Site Manager to support overall site coordination. This role strengthens interface management between trades, maintains programme alignment, and ensures consistent quality and health and safety standards across the project. Working within an active, multi-tenant environment, our team is focused on efficient delivery, clear communication, and maintaining momentum through all stages of construction.

Solution

Our involvement on Acres highlights our ability to not only deliver carpentry packages at scale but also add value through experienced site leadership and a collaborative approach to complex retail developments.
