

NorthLink Warehouse, Papanui

Envision Eighty20

Efficient carpentry and interior systems delivery for a high-performance industrial warehouse development

Scope

NorthLink Warehouse, Papanui is a modern industrial development delivering high-quality logistics and warehousing space to support Christchurch's growing commercial and distribution sector.

Process

Our role as carpentry subcontractor included the delivery of internal and external framing and associated finishing carpentry works across the warehouse and office areas. The project required efficient coordination within this industrial build environment, with a strong focus on programme, safety, and buildability. We also provided a dedicated Site Manager to oversee day-to-day site coordination, manage subcontractor interfaces, and ensure works were delivered in line with programme requirements and quality expectations. This on-site leadership was key to maintaining flow across multiple work fronts and resolving sequencing challenges efficiently.

Solution

Our involvement at NorthLink Warehouse demonstrates our capability to deliver carpentry packages in fast-paced industrial environments, supported by experienced site management and a disciplined approach to programme delivery and quality control.
