# Training

## Operational Training:

**How to** technically operate John Cockerill's turrets, up to crew level. Training is delivered by using various training aids and tools with the aim of prioritizing practice over theory. Simulators are at the heart of this Training to bring the trainees up to a knowledge level that will enable them to operate their turret safely and successfully during live fire sessions, which usually conclude every Training course.

## Maintenance Training:

**How to** maintain John Cockerill's turrets, from Level 10 up to Level 40. The Training aims at providing the trainees with the capability to understand the main turret components' functions and roles, how they work and how they interact with each other, which is the basis for the understanding of the turret's system architecture. At the end of the Maintenance Training, the trainees can conduct preventive and corrective maintenance tasks properly

# Who we train ?

## Train-the-Trainers

Overall objective is to train students to the level of qualified instructors which are well skilled in all tasks required to operate and maintain the new equipment. They will deliver the training to the final end users (operators and maintainers), supported, if required, by the CMI Defence instructors.

## Train-the-Trainees

Overall objective is to train students on the use of a new equipment in order for them to acquire the skills required to operate and maintain new equipment.

## Refresh Training

Overall objective is similar to Train-the-Trainer or Train-the-Trainees but is related to an equipment already in service.

# Where we train

## Customer's facilities

CMI Defence delivers training either in the customer's existing facilities or in new facilities dedicated to the training according to the customer's demand. CMI Defence can also manage the development and building of new training facilities or the modification of existing ones, especially in case the training program is hosting simulators and associated server rooms.

## CMI Defence facilities

CMI Defence LLC can deliver training in customer not owned facilities, either inside or outside Saudi Arabia. So CMI Defence LLC can benefit from the John Cockerill Defense state-of-the-art Training facilities in the East of France, including firing ranges.
