Illumio for Small and Midsize Businesses

Contain ransomware with simple microsegmentation deployed in minutes across every environment.

SMBs can't afford to ignore ransomware

It's not just large enterprises getting breached. In the last year, 75% of cyber incidents hit small and midsize businesses (SMBs). 90% of those attacks, most of which were from ransomware, successfully stole data or credentials.

Smaller networks mean less complexity and fewer resources — and an easy target for attackers. Why spend months hacking a massive network when you can quickly compromise multiple smaller ones for the same result?

No matter your business's size, you're vulnerable. Ransomware attacks are inevitable.

Despite billions spent every year on threat prevention and detection tools, attackers still find a way in. Traditional security approaches are failing to protect SMBs.

And with a data breach costing SMBs $2.46 million on average in 2024, SMBs must consider the financial and reputational risks if they don't prepare for the next ransomware attack.

Zero Trust. Zero hassle.

But ransomware doesn't have to mean disaster.

Cybersecurity experts agree that a Zero Trust approach anchored in microsegmentation is the only effective way to contain breaches, reduce risk, and build resilience against ransomware.

No one does microsegmentation better than Illumio.

Illumio understands the unique cybersecurity pressures facing small and midsize companies. That's why we've made the Illumio Zero Trust Segmentation (ZTS) Platform fast, simple, and flexible.

Key benefits

Contain ransomware

Proactively build rules to block known ransomware paths. Isolate infected systems in ways firewalls alone can't. Bring critical systems online even when an attacker is still active.

Achieve quick time to value

Get granular visibility and identify risk in minutes. Build security policies within a few hours. Reduce downtime during an active breach.

Alleviate resource constraints

Build enterprise-grade security without stretching your team or budget. Automate security with AI tools. Get fast support from our team of experts.

> "We were able to get Illumio up and running within less than 30 minutes. Instantly, we could see our traffic and set up policies to protect our network."

David Hanna
IT Operations Specialist
Hi-Temp Insulation

Contain ransomware without the complexity

Ransomware attacks — and the security tools that protect against them — don't have to bring your business to a standstill.
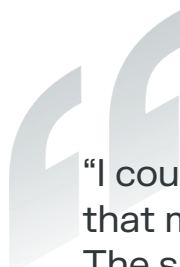

To make it simple for SMBs to contain breaches, the Illumio ZTS Platform delivers:

Simple microsegmentation

Illumio's platform is easy to use and understand. Clearly see traffic flows across your cloud, endpoint, and data center environments. Create granular microsegmentation policies using labels.

Stop breaches from spreading. Isolate compromised systems in ways firewalls alone can't.

Illumio's label-based policies are flexible and dynamic. This cuts down the work needed to manage policies, often one of the biggest challenges with traditional data center firewalls.

"I could not find another product that matches what Illumio does. The speed, ease, and unified control it provides for Zero Trust Segmentation is unmatched in the market."

David Ault
VP of Information Security
Telhio Credit Union

One platform. Any environment.

See and secure your hybrid, cloud, and on-premises environments in one place. Consolidate your tech stack. Simplify compliance and reporting.

Get visibility, microsegmentation, and breach containment across cloud, containers, physical and virtual servers, endpoints, network devices, and IT and OT/IoT.

Fast security management with AI

Illumio delivers value right away. Just minutes after connecting a cloud account or setting up an agent, you get clear insights to help you reduce risk immediately. Many Illumio customers set up their first security policies within a few hours.

Leverage built-in AI features to speed up your microsegmentation project. Use Illumio Insights to understand high-risk traffic flows and quantify your risk. Get automated policy and labelling recommendations. Streamline complex tasks with AI-driven guidance from the Illumio Virtual Advisor.

With Illumio, you can lock down your critical assets and build resilience against ransomware immediately.

Thrive without fear of compromise

About Illumio

Illumio, the most comprehensive Zero Trust solution for ransomware and breach containment, protects organizations from cyber disasters and enables operational resilience without complexity. By visualizing traffic flows and automatically setting segmentation policies, the Illumio Zero Trust Segmentation Platform reduces unnecessary lateral movement across the multi-cloud and hybrid infrastructure, protecting critical resources and preventing the spread of cyberattacks.
