Laminate flooring is one of the top product options in the market today. Many homeowners can't get enough of its beauty and versatility.

But what is laminate flooring? Let's delve into this innovative flooring and show why you should consider it for your next project.

Laminate Flooring

Despite its popularity, few people know the exact physical makeup of laminate flooring.

Laminate flooring consists of multiple layers pressed and bonded together with resins. It generally has four layers which are:

- The **backing layer** — which acts as a moisture barrier
- The **hardcore layer** — supports the weight and foot traffic
- The **print layer** — a high-definition image of a signature look like hardwood or stone
- The **surface layer** — a hardy thin film to protect the print layer

The combination of these layers makes it a unique and practical option that can fit a variety of flooring needs.

Ideal Areas to Install Laminate Flooring

Laminate flooring looks stunning in any room in your home. But if you are looking to maximize functionality, its high moisture, heat, and scratch resistance qualities make it the perfect flooring for high-traffic areas like the **entryways, hallways, and stairs**, areas that need a touch of style like **dining and living rooms**, moisture-prone areas like the **kitchen and laundry rooms** (but only if you can stay on top of spills), and areas prone to prolonged sun exposure like **outdoor lounges and decks**.

1. Durability

Laminate's hard-wearing layers and resin coating make it an incredibly hardy and durable floor. The flooring can withstand high foot traffic, scratches, and dents which means it's pretty much resistant to high heels and the hustling and bustling of pets and children.

2. Variety of Styles

Laminate flooring is often known for simulating wood and stone, but the possibilities of mimicking other materials in different colors and styles are limitless. You can choose from a wide range of plank sizes, tones, and patterns to create an authentic look for your space.

3. Easy to Install

Laminate is extremely easy to install compared to other flooring options. The user-friendly interlocking system where planks fit like a puzzle makes it a breeze even for DIYers with basic proficiency.

4. Budget-Friendly

Laminate is the go-to option for an upscale look on a budget. Its ability to mimic a variety of materials means you can find your ideal style whether that's hardwood, tile, or stone, and enjoy more benefits like longevity and durability at a fraction of the cost.

Disadvantages of Laminate Flooring

1. It Can't Be Refinished

Once the top layer is worn out or damaged, you cannot refinish it.

2. It May Suffer Water Damage

While laminate is highly resistant to moisture, it's advisable not to let spills linger on the floor as they wear down the composite layer leading to damage.

Contact Classic Flooring LLC for Quality Laminate Flooring

When you are ready to find beautiful laminate flooring for your home, call Classic Flooring LLC. Our laminate specialists can help you select the perfect floor from our wide collection of [laminate flooring products](#) that suit your tastes and preferences. Contact us today to get started.

Related Question

What exactly is laminate flooring made of?

Laminate flooring is made from multiple layers pressed together with resins: a backing layer for moisture protection, a core layer for strength, a printed design layer, and a protective surface wear layer.

Is laminate flooring durable enough for kids and pets?

Yes. Its hard-wearing surface layer and tough core make laminate highly resistant to scratches, dents, and everyday wear from children, pets, and high heels.

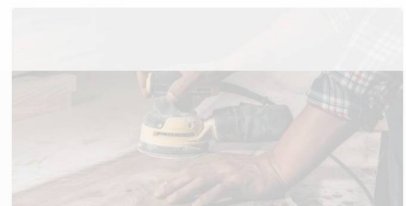

Can laminate flooring really look like hardwood or stone?

Absolutely. The high-definition print layer can mimic wood, stone, and other materials in many colors, plank sizes, and patterns, giving you an upscale look without the higher cost.

Can laminate flooring be refinished if it gets worn out?

No. Once the top wear layer is damaged or worn through, laminate cannot be sanded and refinished like solid hardwood; it typically needs to be replaced.
